OFFICE OF SUPERINTENDENT OF SCHOOLS, }  
December 30, 1877. }

*To Governor SELDEN CONNOR,*  
*and the Honorable Executive Council:*

GENTLEMEN:—Agreeably to the provisions of law, the following report on the Schools of Maine for the current year is respectfully submitted.

Your obedient servant,

W. J. CORTHELL,  
*State Superintendent of Schools.*

# REPORT.

## COMPARATIVE STATEMENT—I.

ITEMS.	1877.	1876.	Increase.
Whole number of scholars reported.....	217,417	218,490	dec. 1,073
Number registered in summer schools.....	125,455	126,482	dec. 1,027
Average attendance.....	100,982	99,106	1,876
Number registered in winter schools.....	132,865	129,903	2,962
Average attendance.....	107,653	105,976	1,677
Percentage of average attendance to whole number.....	.51	.50	.01
Percentage of average attendance to number registered in summer schools.....	.80	.79	.01
Percentage of average attendance to number registered in winter schools.....	.81	.82	dec. .01
Percentage of average attendance to number registered for the year.....	.80	.80	-
Whole number of different scholars registered during year.....	155,428	156,148	dec. 720
Average length of summer schools in weeks and days, 5½ days per week.....	10w. 2d.	10w. 2d.	-
Average length of winter schools.....	11w.	11w.	-
Average length of schools for year.....	21w. 2d.	21w. 2d.	-
Number of districts in State.....	4,039	3,972	67
Number of parts of districts.....	354	350	4
Number of school-houses.....	4,222	4,261	dec. 39
Number reported in good condition.....	3,014	2,802	212
Number built last year.....	86	86	-
Cost of same.....	\$62,766	\$164,399	dec. 101,633
Estimated value of all school property.....	3,022,722	3,005,290	17,432
Number of male teachers employed in summer.....	228	209	19
Number employed in winter.....	2,253	2,151	102
Number of female teachers employed in summer.....	4,553	4,284	269
Number employed in winter.....	2,361	2,351	10
Number teachers graduates of normal schools.....	314	290	24
Average wages of male teachers per month, excluding board.....	\$32 76	\$35 45	dec. \$2 69
Average wages of female teachers per week, excluding board.....	4 14	4 26	dec. .12
Average cost per week of teachers' board....	2 27	2 34	dec. .07
Amount of school money voted for common schools.....	648,584	657,705	dec. 9,121
Excess above amount required by law.....	152,195	161,334	dec. 9,139
Amount raised per scholar.....	2 53	2 58	dec. .05
Amount available from town treasuries for year ending April 1.....	671,157	771,397	dec. 100,240
Amount available from State treasury.....	347,475	375,852	dec. 28,377
Amount derived from local funds.....	24,358	26,821	dec. 2,463
Amount expended for common schools.....	951,877	1,053,497	dec. 101,620
Balance unexpended April 1, 1877.....	94,198	124,176	dec. 29,978

## COMPARATIVE STATEMENT I.—Concluded.

ITEMS.	1877.	1876.	Increase.
Amount expended for fuel, insurance, repairs, &c .....	\$125,211	\$156,441	dec. \$31,230
Amount raised to prolong schools, in money, fuel, board, &c.....	7,402	23,341	dec. 15,939
Amount paid for school supervision .....	30,814	30,866	dec. 52
Amount paid for tuition in private schools, academies, or colleges, within the State...	25,962	27,391	dec. 1,429
Amount paid for same out of the State .....	5,457	8,029	dec. 2,472

## COMPARATIVE STATEMENT—II.

ITEMS.	1877.		1867.		Increase.	
Number of children between four and twenty-one .....	217,417		212,309		5,108	
Number registered in summer schools .....	125,455		110,936		14,519

Amount paid for repairs, fuel, &c.....	125,211		71,511		53,700	
Amount paid for school supervision .....	30,814		16,233		14,581	

Upon careful consideration of the foregoing tables, certain facts will appear, which may be useful in indicating the direction in which changes should be made.

#### RETURNS.

1877. Whole number of towns and plantations in the State,	513
Number making returns, - - - - -	505
1867. Whole number of towns and plantations in the State,	469
Number making returns, - - - - -	429

It appears from the above, that in 1867 forty towns and plantations failed to make the returns. In 1877 only eight towns and plantations have failed to make any returns. Many towns and plantations have made very inadequate reports, failing to answer many questions of importance. As all judicious action in regard to our schools must be based on an exact knowledge of their present condition, accurate and complete returns are of great importance. As the penalty for non-compliance with the law is a loss of 10 per cent. of the school money, it happens that towns having incurred that penalty neglect subsequently to make the returns. It is, therefore, recommended that in addition to the penalty now affixed by statute, the law be amended, so that the delinquent town or plantation shall not receive any school money from the State until full and accurate returns are made.

#### Number of Census Scholars :

1877. Number of census scholars . . . . .	217,417
1876. " " " "	218,490
1867. " " " "	212,309

It will be seen that the increase from 1867 to 1877 was 5,108. The decrease from 1876 to 1877 was 1,073 ; while the decrease from 1875 to 1876 was more than two thousand. Is it true, that there has been a decrease of three thousand in the number of scholars in three years? Probably not. In the enumeration of pupils much carelessness was exhibited, and many errors occurred. With the institution of sworn returns from district agents, a means was afforded for correcting, in part, these errors, and bringing the reports to the exact number.

Part of the apparent decrease is due to this correction. The actual decrease in three years has probably been one thousand.

Registered Pupils :

1877.	Average whole number registered . . .	129,159
1876.	“ “ “ “	128,192
1867.	“ “ “ “	120,392

While the census scholars increased in number from 1867 to 1877 by 5,108, the registered scholars increased in the same interval by 8,767, showing a decided advance during the ten years in the number of scholars in the schools. While the census scholars decreased from 1876 to 1877 by 1,073, the registered scholars increased in the same time by 957, showing progress.

Average Attendance :

1877.	Average attendance for the year . . .	104,462
1876.	“ “ “ “	102,541
1867.	“ “ “ “	92,827

The increase in average attendance for the interval from 1867 to 1877 was 11,635, while the increase in the number of registered pupils is only 8,767. The increase in average attendance from 1876 to 1877 is 1,921, while the increase in registered scholars in the same time is only 957, and the census scholars have decreased by 1,073.

Percentage of Attendance :

1877.	Per ct. average attendance to census scholars,	.51
1876.	“ “ “ “	.50
1867.	“ “ “ “	.44
Increase over 1867, .07.		Increase over 1876, .01
1877.	Per ct. aver. attendance to registered scholars,	.80
1876.	“ “ “ “	.80
1867.	“ “ “ “	.72
Increase over 1876, .00.		Increase over 1867, .08

Length of Schools :

1877. Average length for the whole State, in weeks of 5½ days each, . . . . . 21 weeks, 2 days.

and even elegant building, very well suited to its purpose, and pleasantly located. Notwithstanding the progress made, there are, it appears, 1,208 places used for school-houses concerning which the committee cannot say they are in even *good* condition.

1877.	Number built during the year.....	86
1876.	“ “ “ .....	86
1867.	“ “ “ .....	79

The number built yearly is an indication of progress. Is it not high time that the 1,208 *poor* ones should be replaced by better?

1877.	Cost of school-houses built.....	\$62,766
1876.	“ “ “ .....	164,399
1867.	“ “ “ .....	323,581

The great difference in the cost of buildings, in the years mentioned, is owing to the building of large and costly houses in the cities and large towns during the years from 1865 to 1876. In 1877, the larger towns being well provided with school rooms, the houses built have been country school-houses in rural districts, of much smaller size and less cost.

Number of Teachers :

1877.	Number of male teachers.....	2,253
1876.	“ “ “ .....	2,151
1867.	“ “ “ .....	1,857
Increase in 1877 over 1876.....		101
Increase in 1877 over 1867.....		396
1877.	Number of female teachers.....	4,553
1876.	“ “ “ .....	4,284
1867.	“ “ “ .....	3,781
Increase in 1877 over 1876.....		269
Increase in 1877 over 1867.....		772

The increase in the number of teachers employed, holds a very just proportion to the increase of registered pupils.

Wages of Teachers :

1877.	Average wages of male teachers per month, excluding board.....	\$32.76
-------	--	---------

1876.	Average wages of male teachers per month, excluding board.....	\$35.45
1867.	“ “ “ “ .....	28.78
1877.	“ of female “ “ .....	16.56
1876.	“ “ “ “ .....	17.04
1867.	“ “ “ “ .....	10.84

Decrease in wages of male teachers per month, from 1876 to 1877..... \$2.69

Decrease in wages of female teachers per month, from 1876 to 1877..... .48

Increase in wages of male teachers per month, from 1867 to 1877..... \$3.98

Increase in wages of female teachers per month, from 1867 to 1877..... 5.72

The decrease from 1876 to 1877 was nearly as much in the monthly wages of male teachers, as was the increase for the ten years from 1867 to 1877. That is, the decrease was nearly as much in a single year as the increase in ten years. The decrease in the pay of female teachers is much less, while the increase in ten years is much greater. The explanation is easy. During the ten years a very large number of qualified and successful female teachers has been employed, and a sense of justice and fairness has determined that these excellent teachers should have pay in some degree proportioned to the work they did, as compared with the work done and pay received by male teachers. The questions of teachers' pay, and more constant employment for good teachers, are of vital interest to us as a State. Essential reduction of pay means the rapid loss of our best teachers. Within the year fifty teachers of superior ability and proved success have gone from the common schools of this State to teach in other States. How long can we stand such a drain and maintain any fair degree of efficiency in our schools?

Normal Graduates :

1877.	Number of teachers graduates of Normal schools,	314
1876.	“ “ “ “ .....	290
Increase .....		24

Nearly one hundred pupils graduated from the two normal schools of the State during the past year. Why then no greater increase in the number in the schools? Some of the recent graduates cannot find positions since the great reduction in wages made by some agents during the past season. Agents have in many cases refused to give these graduates four dollars per week, and have hired girls of sixteen for three dollars, who were incompetent, and whose influence on the pupils was bad so far as intellectual growth is concerned. Thirty-four of the graduates of our normal schools have gone out of the State, to take positions as teachers in other States. They have each taught more than two years in the schools of the State, and so have redeemed the pledge made by them to the State. But the schools will feel the loss of these teachers. It is a matter worthy of careful consideration, to determine if it be possible, by what means we may retain more of our best and most experienced teachers in our schools.

Amount of School Money :

1877. Common school income from all sources...	\$1,020,317
1876.           "           "           "	1,060,378
1867.           "           "           "	550,191
Increase from 1876 to 1877 .....	470,126
Decrease from 1876 to 1877.....	40,061

The increase for the ten years is found in all the five sources of the common school revenue, viz : municipal taxation, bank tax, mill tax, interest on permanent school fund, and interest on local funds held by towns in trust. The decrease for the last year is mainly in municipal taxation and the bank tax. It is hoped that the diminution from these sources will not proceed, as further reduction will cripple the work very greatly. It will do this in two ways, shortening the terms of school, and by the decrease of wages driving many of our ablest teachers out of the State or out of the business. The amount of money seems large, but when the number of scholars to be educated by its expenditure is considered, it does not seem too large.

In amount of money expended for common schools, in proportion to population, Maine stands as the eighteenth among the States of the Union; in proportion to pupils, Maine stands sixteenth; in proportion to valuation or taxable property, Maine stands as the eleventh. Our expenditure for common schools, then, can hardly be called excessive, in comparison with other States.

### HIGH SCHOOLS.

I have visited many of the high schools in the State during the year. A careful inspection shows these schools to be in a fair condition. They are making progress. Before the passage of the "Free High School" law, in 1873, twenty-one towns and cities in the State maintained high schools. During the year 1877, one hundred and fifty-one towns and cities maintained such schools one or more terms. More than twelve thousand scholars received instruction in them. Their effect on the common schools has been very beneficial. Some of the high schools are of comparatively low standard. Yet every one is of higher grade than the common schools of the town or district in which it is established: The high schools have improved the quality of the work in the common schools. They have done this by placing before the pupils an object to be gained, and by fixing some standard necessary for its attainment. No school can be successful in the highest degree, which does not direct its pupils to some end outside of and beyond itself, as the limit of its work. The primary school points its pupils to the grammar school; the grammar to the high; the high to the conflict of active life, or to the college; the college to the school of life. The college student, who does not feel the impulse of the struggle which awaits him, inciting him to the highest possible development of all his faculties, will be no honor to his college, and of little weight in the world. Thus each grade of school acts powerfully on the one below it. It says to each pupil, come up higher, enter my ranks; attain higher place and advanced honor. But to do this, you must make higher attainments in knowledge, you

must grow mentally. This can be done only by close study, by patient labor, by long continued thought. Thus the standard of each grade is raised.

In the towns and cities maintaining high schools, this influence has been felt, and the schools in those towns are the best in the State. The ungraded schools in towns having no high schools, had no such impulse, and their standard of attainment was very low. The establishment of the high school in such towns, for a single term, has supplied such impulse, and has affected the schools very greatly. It has placed before the pupils an object to be gained, viz: entrance into the high school. But in fixing conditions to the attainment of this object, it has elevated the standard of the common school. In former years, the academies offered something of the same stimulus. But the influence of the academy was limited. It could only affect the few who could command the means to pay the expense of academic instruction. The high school touches every child in the town. It opens its doors to all. It invites the rich and poor alike, to come and enjoy its privileges. The academy was the school of a class. The high school is the school of the whole people.

The free high schools have aided the common schools very greatly by furnishing better qualified teachers. The district schools must be taught, mainly, by teachers living in the towns or districts in which they teach. The wages paid are so low that trained teachers cannot be found to take the schools in the smaller districts. The question, then, is a vital one, where shall teachers for these schools receive their education? Many of them have in past years obtained all the training they had in the ungraded school of their own district. All the errors of a poor, ignorant teacher would thus be copied, repeated, exaggerated, by a dozen of his pupils, who in their turn would become centers of like errors. These schools had no standard of attainment. They had no searching examination, no careful inspection, by competent officers. The pupils coming from them and applying for places as teachers, had to pass no rigid examination by experts. All

these circumstances combined, put into the smaller district schools of the State a corps of teachers of very low qualifications. The establishment of the high schools under the law of 1873, gave the persons intending to teach, a chance for better training. The teachers in charge of these high schools were, many of them, trained and qualified teachers. They gave to their pupils an example of good teaching, which the pupils could imitate. They required certain qualifications to enter the high school, and thus secured better work in the common schools; and they gave some degree of culture, which raised the pupils out of the former "dead sea of ignorance." The effect of the free high schools on the schools of lower grades, has been in this respect very marked, and most advantageous.

These schools have been of very great advantage in stimulating individual pupils. In the district schools they reach the first class at about fourteen. After that if they attend school, they go over the same studies, in the same careless, uncertain, superficial way. They are disgusted with school, and leave at sixteen, with no accurate knowledge of any subject, and no scholarly ambition. Put these same pupils into a school of different grade; bring them into contact with a live teacher, of culture and skill; let them come into generous emulation with other advanced pupils; introduce them to new subjects of study; subject them to proper methods of teaching, and a miracle is wrought. The intellect is awakened; the ambition is aroused. The scholarly spirit is brought into activity. The indifferent or mischievous pupil is changed into the earnest, persevering, thoughtful student. He has received an impulse which will carry him right on in spite of all obstacles, to high attainments in knowledge and culture. These results have been produced in the case of very many pupils, by the establishment of the high schools. The pupils thus benefited belong to no one class in the community. They are the children of the humblest, as well as the highest. Many a boy, now in poverty, will in after years, from a position of influence, look back to the public high school and

thank the State for its liberality and wisdom in establishing these schools.

Some persons of influence have lately announced that there should be no advanced education at the public expense, that the municipalities should give only the most elementary education. This is reversing the system of the fathers. It is contrary to the earliest and constant practice of this State, and in fact of all New England. This State, in its very organic law provided for the higher education, at the public expense, and that has been its policy all through its history. Massachusetts, in its first educational enactment, provided for advanced education, and has generously supported it ever since. Shall this policy be now reversed? Shall all advanced education at the public expense be abandoned? The advocates of the abandonment urge two reasons for the proposed policy. These two are in reality one. Other considerations are suggested; yet they all rest on these two. First, that all cannot enjoy the privileges of the advanced education, directly. Second, that the great mass of the pupils are to be "hewers of wood and drawers of water," and, therefore, need only an elementary education.

In answer to the first: It is true of all elementary schools, that all children cannot enjoy the privileges of the higher grades, or even of any grades. Shall we then stop all schools above the very lowest primary grades? This is the logical conclusion from the premises. The second objection contains the pith of the whole argument. The mass of the children are to be workers. They can work just as well without learning. They are even better workers without advanced education. So give them just the ability to read and write and they will be useful and profitable machines. Such is the meaning of the argument, under whatever pleasing sophistries it may be clothed. The argument would do for an absolute government. It is false to all ideas of democracy or freedom. It would divide society into classes between which there would be a gulf as impassable as that between Dives and Lazarus. It gives the lie to the very basal idea of American

institutions. It is a proclamation of hostility to the practice of the republic, whose *glory* is the lives and exploits of the men, who from the ranks of the "hewers of wood and drawers of water," have come up to the highest places in the land. The argument put in plain terms is this: A boy is born poor; his father is a worker, therefore the boy must be a worker all his life. He must have no hope, no aspirations for any other way of life than that to which he is born. Too much knowledge will make him discontented, so give him the merest elements; just lift him in the slightest degree above brutish ignorance, in order that he may have the intelligence of a well trained animal, and be a better worker. Another boy is born to wealth. In the race of life he has the vast advantage of wealth; give him in addition the highest possible education; aid him with all the power of knowledge; so build up and foster class distinctions. Keep the poor, ignorant, but give the rich, knowledge, and the added power which comes from knowledge. This is what the argument means, if it means anything.

The advocates of the free high school say, No! In accordance with the principles of true democracy, give every child a chance for such an education as will enable him to make the most of his powers. Let knowledge be free to all. Let the boy born in poverty know that the way is opened for him to any place in life for which his powers fit him.

The high schools are very advantageous to the pupils, by giving a *practical* education. This may sound strangely to many who are wont to say that the higher education is ornamental. But what is a practical education? Obviously, one that fits its subject to do well the special work of his life. The greater number of our boys must be farmers or manufacturers. To do this work well, what knowledge is absolutely essential? In arithmetic, facility and accuracy in the fundamental operations, with a knowledge of accounts and interest; in language, the ability to speak and write clearly and concisely; in geography, general facts and principles,

such as intelligent men of affairs have. But the farmer or manufacturer does need a knowledge of botany, that he may know the laws of growth of the plants he cultivates; of zoology, that he may have skill and consequently success in raising the animals on which the profits of his toil depends; of mineralogy, that he may know the nature of the soils in which he works; of chemistry, that he may have skill in the application of manures; of physics, that he may understand the machines required, their management and application; of entomology, that he may be able to meet and defeat the work of the myriad insect forms which often rob the farmer of his harvests. Practical men need these studies to make them careful observers of facts, skilled experimenters, masters of nature in her secrets and processes, so that they can work in harmony with her and thus gain victory, rather than in opposition to her and thus suffer defeat. The high schools teach these subjects, and thus are pre-eminently the *practical* schools of the system. The grade of some of these schools is too low, but there has been an advance during the year. It will doubtless be practicable and desirable soon to fix by authority a minimum grade for these schools.

Great care should be exercised in the selection of teachers, and in fixing a course of study. It is desirable that in every high school in the State, such teachers be employed as can give exemplification of the best methods of teaching. Out of these schools must go, for many years, the teachers of our common schools. Hence the *methods* of the principal are to be the methods in many schools. Good teaching has often been sacrificed to a supposed need for certain studies. A few scholars think they wish to study Latin. To meet this wish, some one must be employed as teacher, who has a smattering of Latin, but who knows nothing of teaching. It is desirable that the principal of a high school should be first, a teacher, skilled in the best methods. He should be able to teach the English studies and the natural sciences with the highest success. These are essentials; no contingencies can occur in

which these qualities should not be demanded in the teacher of a high school.

The course of study in these schools, in every case, in city or village, as well as country, should provide for a thorough, systematic review of elementary English studies. This is necessary, alike, for the pupil who is to enter college, for the one who is to enter practical life, and for the one who is to teach. No brilliancy of results in the higher English, or languages, can compensate for a failure to secure this thorough acquaintance with the elementary studies. When this is done the high school will have a more assured place in the confidence of the people.

### NORMAL SCHOOLS.

The normal schools have been fairly successful during the year. Some changes have taken place in the faculty of the Farmington school. The principals and subordinates of the two schools are honest, faithful workers. The principals have a long experience, a broad culture, professional skill, and great executive ability. These schools ought to be made an essential part of our educational system. To this end the standard of admission should be raised. The work should be more largely professional, and less academic. A well equipped model school should be put into each building, in which methods, reasoned out theoretically, may be practically shown. The examination should be more searching at the close of the course. The diploma should be made by law a certificate, good for any school in the State.

There are many teachers in the State who feel the need of some professional training. Many graduates of our high schools, who have a good education, wish to teach, but they lack professional skill. They know nothing of methods of teaching. It seems to me desirable, that for these classes a school should be established, in which their wants can be met. They say they cannot afford the time and the money for a two years' course. I therefore recommend the establishment of another normal school, with a course of six months. Let the

standard for admission be high. Give a thorough review of the elementary studies, with special reference to teaching. Make the study of methods prominent. Have a well arranged model school, in which the pupils shall put in practice the instruction of the normal school. By this course a large number might be graduated each year. They would not have the advantages gained by the full course of two years in our present schools, but they would be very much better teachers for the common schools than many of those who now fill the position.

The reports of the secretary and principals will give fuller details of the normal school work for the year.

FARMINGTON, Dec. 1, 1877.

TO HON. W. J. CORTHELL,

*State Superintendent of Common Schools:*

The following annual report of the condition of the State Normal Schools is herewith respectfully submitted by the Secretary of the Board of Trustees:

The school year at Farmington is divided into two terms—fall and spring; at Castine, three terms—fall, winter and spring. The attendance has been as follows:

Farmington—Fall Term, 133; Spring, 135.

Castine—Fall Term, 123; Winter, 75; Spring, 138.

The preparatory course was discontinued at the close of the year. The practice-teaching in the public schools at Farmington was also discontinued, notwithstanding the village has erected a new and elegant school building which contains under its roof a union school of four grades, taught entirely by normal graduates.

At Castine the practice-teaching in the public schools continues, and reports indicate that the pupils of the Normal School are much benefited by the work they do there.

The school building at Farmington is in good order. By the liberality of the last legislature, the Trustees have been able to purchase new desks, which were very much needed.

At Castine some repairs have been found necessary in order to preserve the building, and with such other repairs as are being made it is hoped that the imperfect work of contractors may be permanently remedied.

Library and apparatus of both schools are in good order, and with such additions thereto as the annual appropriations for the support of Normal schools will admit of, there will be ample means for present wants in this direction.

## RECEIPTS.

Annual appropriations for 1877,	-	-	\$15,000	00
Appropriation for desks at Farmington,	-	-	300	00
			<u>15,300</u>	00

## EXPENDITURES.

For list of text-books and other information regarding the Normal Schools, reference is made to the reports of the Principals, which are herewith submitted.

D. H. KNOWLTON, *Secretary.*

STATE NORMAL SCHOOL, }  
Farmington, Me., Nov 5, 1877. }

To MR. D. H. KNOWLTON,

*Secretary of Board of Trustees of Normal Schools:*

I herewith submit the annual report of this school required by the Board of Trustees of Normal Schools for the school year 1876-77.

The number of pupils for the fall term was 133; for the spring term, 135. The school year is divided into two terms, and the school is organized in four classes, a class being admitted each term. At the close of each term a class is graduated. A trial of several years proves the great advantage of this organization as compared with the former plan of three terms in each year, with the graduation of one class each year.

The following text-books were used during the year: Smith's Drawing Books, Hutchinson's Physiology, Harper's Geography, Evans' Geometry, Hillard's and Sargent's Readers, Norton's Physics, Gray's Botany (How Plants Grow,) Thalkeimer's Ancient History, Higginson's United States History, Greenleaf's Elementary Algebra, Hooker's Chemistry, Fowler's Grammar and Anger's Hand Book of the English Tongue, Rolfe and Gillett's Hand Book of the Stars, Dana's Geology (Geological Story Briefly Told,) Hickok's Science of the Mind, Wickersham's School Economy, Rosenkrantz's Pedagogics, Currier's Infant School Education, Herbert Spencer's Education. Much of the instruction has been oral.

The apparatus is in good condition. In some departments of Physic's more apparatus is needed, and much more is needed for illustration in common school branches of study. Though there is no lack of elegant and costly apparatus for High and Scientific Schools and Colleges, the greater need of objective illustration for the pupils in the lower schools, to whom the words of their text-books must otherwise remain a mere sound

and not the symbol of a clear idea, has not yet been comprehended by our people. The appliances for elementary teaching shown in some European exhibits at the Centennial Exposition, were to us a surprise and a revelation. There are but few if any schools in the United States which are adequately furnished in this direction, and no pains nor expense should be spared to give the Normal School an equipment fully up to the demands and the possibilities of the present time.

By a generous legislative appropriation, we are enabled, this year, to replace the desks and seats in use since the organization of the school, by others much more elegant and convenient, and better adapted in every way to the wants of such a school as this. The building is in good condition.

It has long been evident that more than two years is needed in which to accomplish the full measure of work demanded of the Normal School. To meet this want it has been proposed to add an optional advanced course of one year. Some two years since a preparatory course was established, with the expectation that it would give essentially the advantages of an advanced course. A trial of one year disappointed all these expectations, and it was given up last winter as a failure. It was hoped by many of our graduates who wished to enter upon an advanced course, that this would be established this year. I can only renew the repeated expressions of former years, that such a course is greatly needed as a relief to our present crowded course of study, as a means of training some of our pupils to a higher degree of culture and efficiency, and also as a means of furnishing to all our pupils additional facilities for distinctive professional training.

At the beginning of the Spring term, the arrangement which had for one and a half years existed for practice teaching of pupils of the Normal School in the public schools of the village, was suspended by the Inspectory Committee, and at the annual meeting of the Trustees in July, it was formally given up. For six years previous to this arrangement, a Model and Training School had been successfully conducted in the Normal School house, under the entire control of the Normal School, as an integral part of the Normal School work. This department was the right arm of the Normal School. A wide range of observation, and a wider correspondence with the most experienced teachers and superintendents, joins with my own experience to convince me that in no other way can satisfactory training work be accomplished, and I believe the time is rapidly approaching when a Normal School without an efficient training department, under its entire direction and control, will find it difficult to prove its right to be.

Respectfully submitted.

C. C. ROUNDS.

STATE NORMAL SCHOOL.  
Farmington, Me., Dec. 24, 1877. }

HON. W. J. CORTELL,

*State Superintendent of Common Schools:*

In accordance with the requirements of the law, I present my annual report.

For most of the statistics relating to the school, and for various suggestions in regard to its condition and wants, I would refer to my report to the Secretary of the Board of Trustees; in this report calling attention to some additional statements.

The numbers in attendance during the past year, were, in the Fall Term 133; in the Spring Term, 135. At the close of the Fall Term a class of 19 graduated from the school; and at the close of the Spring Term a class of 15. Nearly all pupils enter the school with an earnest desire to fit themselves for teaching. Some do not intend to complete the course; some are prevented from doing so by circumstances beyond their control. The high standard required for promotion from one class to another stops others on the way, so that from all these causes, the number graduating is much less than the number entering. The ratio of number graduating to number belonging, can be raised only by lowering the standard of attainment, which would prove an injury to the school, or by more systematic and definite effort to select from the various counties of the State pupils well fitted to enter upon our course of study.

The Normal School is the crown of the common school system, since it is instituted to train teachers for the common school. This in theory no one will deny. In this State, however, no effort has been made to give practical effect to the theoretical truth. The diploma of a Maine normal school is to-day worth more to one of its graduates in California than in Maine. For want of any system of examination for admission to the business of teaching, there is now in our State no standard of qualification for teachers, and those most carefully trained are often lost in a mob of incapables who attempt to teach because they are fit for nothing else, and who find employment because they underbid all others.

There is need of an entirely different mode of certificating teachers. Were the granting of certificates left to an examining board in each county, the standard of examination fixed, and the rules for conducting examinations prescribed by the State Superintendent, and, by virtue of such an examination, the diploma of the Normal School made a State certificate, the Normal School would at once be brought into much more effective and vital relation with the public schools of the State. If, then, a certificate to teach, granted by a county examining board, were made at the same time a certificate of admission to the normal schools, the school would be brought home to the knowledge, the sympathies, and the interests of the teachers of the State, to such a degree as would be possible in no other way, and its power for good would be vastly increased.

It has been said above, that the Normal School is the crown of the common school system, since it is instituted for the purpose of training

teachers for the common school. By what is called the Free High School Act, the Free High School is beyond all question, in Maine, a part of the common school system, and the Normal School should be able to furnish teachers for schools organized under that act. For the High Schools of a very advanced grade, sustained in cities and in some of our larger towns, teachers must of course be obtained from among the products of a college course. In many of the small towns of the State, however, schools have been established under this act which serve to continue, upon a somewhat advanced grade, the work of the common school, thus tending to equalize the general educational privileges of the people of country and city. The main work of these schools is instruction in the English branches; and to them the people largely look for teachers for the small schools in the surrounding districts. Hence, there is in these schools a special call for teachers trained in methods of instruction and in modes of school organization and management, in short, for the best products of the Normal School. Yet, it is impossible, in our two years' course, to give the instruction needed for these positions. Young men upon entering the school are required to pledge themselves, in case they graduate, to teach for two years in the State. Unless they can teach free high schools in the spring and fall, they must fulfil this pledge by teaching winter schools alone. The case is one of especial hardship for them, and the results are seen in this school in a constantly diminishing number of young men in attendance, with a corresponding increase of young women. By an amendment of the school law, the addition of a year to the course of study is allowed, and I would earnestly call attention to the subject.

With such a change in the mode of examining and certifying teachers as will give the profession a definite and recognized position in the State, and bring the Normal School into effective and vital relation with our common school system; with the reorganization of the Training School on a sound basis (see report to Secretary of Board) and such an extension of the course as will enable us to fit our graduates to perform satisfactorily the work demanded by teachers in the Free High Schools, we may expect the Normal Schools to advance with a firmer tread to a broader field of usefulness, to commend themselves in a still higher degree to the confidence of the people, and to afford more ample justification of the wisdom of those whose labors led to their organization.

Respectfully submitted.

CHARLES C. ROUNDS, *Principal.*

STATE NORMAL SCHOOL }  
Castine, Me., November 1, 1877. }

TO DAVID H. KNOWLTON, Esq.,

*Secretary of Board of Trustees:*

I submit my annual report for the school year ending June 22. The number of pupils attending during the fall term was 123; during the winter term, 75; during the spring term, 138. Total attendance for the year, 336. The school year consists of three terms. The fall term of 12 weeks,

commencing the last week of August, is followed by a vacation of two weeks. The winter term of 12 weeks, commencing the first week of December, is followed by a vacation of two weeks. The spring term of 14 weeks, commencing the second week of March, is followed by a vacation of ten weeks.

The following text-books are used: French's Arithmetic, Robinson's Algebra, Brooks' Geometry, Kerl's Grammar, Quackenbos' Rhetoric, Collier's English Literature, The Franklin Sixth Reader, Harper's and Guyot's Geographies, Tenny's Geology, Hutchinson's Physiology, Norton's Natural Philosophy, Elliot and Storer's Chemistry, Gray's Botany, Lockyer's Astronomy, Alden's Civil Government, Porter's and Champlin's Intellectual Philosophies, Wickersham's School Economy and Methods of Instruction, Page's Theory and Practice of Teaching, Jewel's School Government, History of Education, Barnes' History of the United States, Swinton's General History, Smith's System of Drawing, Bryant and Stratton's Book-keeping.

The school has an excellent library for general and professional reading, and most of the text-books used in the school are loaned to the pupils free of cost. The philosophical and chemical apparatus is in good condition and of good quality. The school has a good supply of maps and charts. There are patent double desks in the main hall, and settees in the recitation rooms sufficient to seat 176 pupils. There are ten teachers' desks and tables. The furniture is in good condition.

The building has been kept in thorough repair, and arrangements have been made to remedy defects in its construction. The appearance of the grounds has been improved by setting out shade trees, and further improvement can be made by grading.

Yours truly,

G. T. FLETCHER.

STATE NORMAL SCHOOL, }  
Castine, November 16, 1877. }

HON. W. J. CORTHELL,

*Dear Sir*—I herewith submit my annual report. For details I refer you to my report to the Secretary of the Board of Trustees. Your official visits have made you familiar with the general character of the work of the school. The aim of the teachers has been to assist the pupils to secure a thorough knowledge of the studies pursued, and through observation and practice to attain skill in teaching.

As a large percentage of those who enter the Normal School have had only the advantages of our common schools, much attention must be given to the attainment of scholastic knowledge as a basis for professional instruction. But the methods of instruction are planned to combine the fundamental principles of right teaching, with the elements of knowledge, and during the last year of the course special attention has been given to the theory of teaching, school organization and management. The Primary practice department has improved under the management of its

teachers, and the Normal students have received benefit from observation and practice teaching in this school.

As the Trustees have not thought it advisable to extend the time of the course and introduce the languages, the committee to whom the matter was referred, will doubtless decide to reduce, to some extent, the number of branches now pursued, that more time may be given to professional training.

A course of lectures upon educational topics, by eminent teachers, would be of advantage to the students.

The library contains a number of valuable returns upon educational subjects, and more will be purchased this year.

The average ability and industry of the pupils compare favorably with former years. The class of thirty-three which was graduated last year, was the largest ever sent out from the school, and in point of ability, age and teaching experience, one of the best. I am pleased to state that with few exceptions, the graduates and under-graduates have taught more or less since their connection with the school, and most who have completed the course have met with success.

No training can make good teachers of those who have no natural adaptation to the work, but it is of great advantage to those who possess good natural abilities. Time and experience must develop the full power of the teacher, but experience alone costs too much in time and in the results of experiments upon human beings, to be relied upon to the exclusion of previous study of educational means and methods.

In order that the state may derive more benefit from its investment in Normal Schools, there must be a more thorough examination of teachers, closer inspection, and provision whereby our common schools can give employment to teachers from six to nine months per year. About three-fourths of the children of the State must receive their education in the district schools, but persons of ability cannot afford to devote several years to preparation to teach, when the average school affords employment but twenty weeks in a year. It is to be hoped that our people will realize the need of longer and better schools, and take measures to stop the exodus of our best teachers to States west.

Respectfully,

G. T. FLETCHER.

OAK GROVE SEMINARY, }  
Vassalboro', Nov. 19, 1877. }

HON. W. J. CORTHELL,

*Superintendent of Common Schools:*

*Dear Sir*—I herewith submit the annual report of the Normal Department of Oak Grove Seminary for the school year beginning Dec. 5, 1876, and ending Nov. 3, 1877. This department has been in successful operation thirty-three weeks.

The following is the list of students in attendance, with age, date of entering, leaving, and weeks present:

## SUPERINTENDENT'S REPORT.

G. C. KILGORE, *Associate Principal.*

MAINE CENTRAL INSTITUTE. }  
Pittsfield, Nov. 17, 1877. }

HON. W. J. CORTHELL,

*State Superintendent of Common Schools :*

*Dear Sir*—Herewith I submit the annual report of the Normal Department of the Maine Central Institute. The school year consists of forty full weeks. The winter term began Nov. 6, 1876, and the fall term closed Oct. 26, 1877. At the close of last year one of our Normal teachers was compelled by sickness to leave. We were very fortunate in securing another of much experience in Normal work. Our number is increasing and more thorough work is done in the department.

The following text-books are used: Webster's and Worcester's Dictionaries, Franklin Sixth Reader, Greenleaf's Practical Arithmetic and Elementary Algebra, Whitney's Essentials of English Grammar, Norton's Physics, Youman's Chemistry; Barnes' U. S. History, Anderson's General History, Loomis' Geometry, Dana's Geological Story, Wood's Botany, Hart's Rhetoric; Hopkins' Outline Study of Man, Underwood's and Shaw's English Literature, Hutchinson's Physiology, Smith's Free-hand Drawing, Meservey's Book-keeping. Other books are used in instruction and for reference. Wickersham and other authors are used in teaching didactics.

STUDENTS.

When we admit students under sixteen and seventeen years of age, we extend the course over three or more years.

Respectfully,

CYRUS JORDAN,  
*Principal of Normal Department.*

## TRAINED TEACHERS.

The schools of Maine need to-day qualified, trained teachers. This is the greatest want. It is not meant that there are not many such in the schools. Some have received a professional training which has aided them to achieve success. Others have become successful through years of experiments—experiments painful to themselves, and of infinite cost to the subjects. There are six thousand teachers in the schools of the State. The average time of service is four years. Fifteen hundred new teachers are needed each year. More than one thousand were employed for the first time last year. They were in part young girls from fourteen to seventeen, with but little knowledge of elementary studies; with absolutely no knowledge of the principles or methods of good teaching. Another part of the thousand were young men, or boys in preparation for college or a profession, with some slight smattering of Latin, but with no real knowledge of the elementary studies, and not the shadow of knowledge, either of the nature of the subjects on which they were supposed to work, or the proper methods of such work. A third class is

composed of young men or boys, who unable to succeed in any other business, have sought refuge from starvation in the schools. A few of the thousand are trained teachers, young men and young women, who with an appreciation of the responsibility and importance of the work, have sought by reading, by study, in the professional school or elsewhere, to fit themselves for their work.

Shall the loss of money, time and mental development, brought about by untrained teachers, be longer endured? But many say that no such preliminary professional training is needed, that experience is the great master, and that by experience alone can one ever become a successful teacher. Doubtless one possessed of a sympathetic spirit and an observant eye, by daily contact with children and youth, will, in time, gain a very serviceable, or even, in some rare cases, a profound knowledge of the needs and aspirations of the youthful mind and heart. Fortunate indeed are those who strive to gain such a knowledge. Doubly fortunate are the pupils of such masters. But even in the case of the few thus favored with natural gifts of an exceptionally high order, how sad is the remembrance of those days of experiments; many mistakes come up in memory; mistakes which could now be avoided, but which were the necessary result of the teacher's lack of knowledge. Punishments were inflicted, which seemed to the teacher's narrow view necessary, but which seen by the light of a greater knowledge, are now known to have been needless, and therefore cruel. The pupil was misunderstood, and in ignorance of his real nature and modes of thought, was so treated as to be fearfully wronged.

Mistakes like these are in the memory of every teacher, who through experience has become eminent. What then must be the wrecks caused by the great array of blunderers, who, spite of all experience, are blunderers still. They have, perchance, developed into good drivers. They can govern well, that is they can keep a school still, can repress all mischief, as they repress all intellectual life. But for all, for

teachers as well as pupils, it were surely far better to bring knowledge to bear upon experience. He will be infinitely helped in his experiments, who begins his teaching, as fully acquainted as one possibly can be, by study, with the nature and constitution of that marvellously delicate and sensitive organ with which he has to deal, the mind of a child or youth. Such knowledge will guide the teacher in his thorny path. It will enable him at once to reap a richer harvest from his experience, and above all, to modify and correct the mistakes and defects of his individual conclusions, by a larger induction and a wider survey. Surely such previous knowledge does not diminish the value of experience. It invests it with a new power, enriches it with a new charm, vitalizes it with a new energy.

The need of special training is denied, on the ground that teachers learn how to teach by observing the methods of their own teachers. This assumes that the methods in which the pupils are trained are correct. But suppose these methods are a travesty on good teaching: what will be the effect on the pupils trained in such schools? But it is not true, that the pupils acquire much knowledge of methods during their course in ordinary schools. On this point the following testimony from one of the best teachers of the country is doubtless the experience of many of the teachers of the country:

"During my whole life I had been more or less connected with school work. My earliest home recollections were connected with school. I had been for twelve years a pupil. I had been subsequently for two years an assistant teacher, and during my whole college course I had not only been engaged in private teaching, but I had the inestimable privilege of seeing what really good teaching was. Yet, when I took charge of a school as principal, I found all these circumstances utterly inadequate as a preparation for my work. During all the time I was passing through these preliminary experiences, I had scarcely any thought of teaching as my future work. I naturally failed to extract from them all the good they were calculated to impart. Hence, none but those who are in school,

or are studying with the avowed and conscious purpose to prepare for teaching, will so observe methods and principles as to gain any adequate preparation for the teacher's work."

Some fear, that by training, teachers will loose originality, individuality. It is said that the teacher should "evolve methods from his consciousness, and then they will be his own, and he will succeed with them." And so the old cry is raised, "beware of imitation; no one ever became great by imitation." Better have a good imitation of a good method, than a bad method by "original invention." But the training should be in principles and methods. The principles of all good teaching are fixed; they are founded on the laws of mind. Good methods must be in harmony with these laws, and founded on right principles. But how can a person utterly ignorant of mind, discover the principles of mental development, or invent methods in accordance with those principles. Professional training, rightly conducted, would give, first, a thorough acquaintance with mental philosophy; and second, skill in inventing methods to meet the individual peculiarities of the pupils.

It is said that by this training, which we affirm to be so necessary, we compress into a narrow, fixed mechanical groove all the living energy and force which good teaching so specially demands. In proof of this the work of our trained teachers is cited as narrow and mechanical. If this is true, which is by no means admitted, it may be more fairly attributed to the almost endless rules, regulations, and restrictions imposed by school boards to which such teachers are subjected. Whatever of advance has been made in our educational methods during the past ten years, has been due, very largely, to the work of our trained teachers. Whenever the State shall insist that all persons before taking upon themselves the charge of pupils, shall have received some sufficient *special* preparation for the work, then the State will receive a fuller return for the school expenditures.

## EXAMINATION OF TEACHERS.

The law recognizes the necessity for some form of examination of persons, before they shall be allowed to exercise the teacher's office. The provisions of law touching this subject are in the words following: "They (the S. S. Committee) SHALL appoint suitable times and places for the examination of candidates proposing to teach in town, and give notice thereof by posting the same in two or more public places within the town, at least three weeks before the time of said examination, or the publication for a like length of time of said notice in one or more of the county newspapers having the largest circulation in the county.

On satisfactory evidence that a candidate possesses a good moral character, and a temper and disposition suitable to be an instructor of youth, they *shall* examine him in reading, spelling, English grammar, geography, history, arithmetic, book-keeping and physiology, and such other branches as they may desire to introduce into public schools, and particularly in the school for which he is examined; and also as to capacity for the government thereof.

Any person who teaches a district school without first obtaining a certificate from the superintending school committee of the town, shall forfeit not exceeding the sum contracted for his daily wages, for each day he so teaches, and shall be barred from receiving any pay therefor; and no certificate shall be valid for more than one year without the approval of the superintending school committee annually endorsed thereon."

The statutes of the State thus recognize the importance of the examination of teachers. Inferentially, at least, the manner and extent of this examination is indicated. The committee *shall* appoint a time. This provision, if carried out, would make the examination public. They *shall* examine in certain specified studies. The provision is not optional. It is imperative. They *shall* examine as to capacity for the

government of schools, and *shall* have satisfactory evidence that the candidate possesses a good moral character and a temper and disposition suitable to be an instructor of youth. Were the imperative *demands* of the statute complied with, the State would have better schools. But they are not complied with. In very many towns there is no attempt to have a public examination at a time announced. The candidates come when they please. The committees do not *insist* on the public examination. Yielding this they give up all of value there is in the matter. The candidates who are incompetent come one by one so as to avoid witnesses of their lack of knowledge. The committee cannot afford the time necessary to examine each candidate separately. So the examination becomes a farce. In a majority of the towns of the State, no question touching methods of teaching, school organization, or discipline, is asked. A pressure is brought upon the committee to pass incompetent persons, by the agents and residents of the district, under the district system. In not a few cases the committees feel some doubts of their own ability to examine a well qualified person. So if the applicant puts on a confident air, and takes the liberty of asking puzzling questions, the committee are silenced. Any one who has closely studied the subject, and had opportunities for careful and extended observation, cannot fail to be convinced that in a large number of towns the present mode of examination does fail to secure competent teachers. They are incompetent not only in knowledge of methods, in power to instruct and govern, but in elementary knowledge of the subjects to be taught.

What can a proper examination of a candidate for the teacher's place show? It cannot prove the possession of *power* to govern. It cannot demonstrate that love for children, without which, the *best* teaching is impossible. It cannot show that quick perception of individual peculiarity, that versatile invention and quick active sympathy, without which, one cannot be the true master. It does not exhibit that unflinching patience, that high regard for truth, and that chris-

tian courtesy, which every teacher ought to possess. These can only be shown by actual work in the school-room. But any examination which deserves the name, can and should show an extended and accurate knowledge of the branches to be taught. It should prove the possession of a thorough knowledge of the elements of mental science. It should demonstrate the possession of a knowledge of the principles of teaching, as derived from the laws of mind, and of methods of instruction, based upon these principles and established by the practice and in the writings of eminent teachers of the past. Such an examination will prove the applicant's knowledge of the theory of school organization and government. It will prove beyond a doubt the candidate's power to instruct, because it will show the power of clear, concise, and definite expression.

That such an examination is demanded to secure the best results from the schools, is conceded by all. How to obtain it is the important question. That it has not been secured by the present system is evident. Such an examination demands, first, a skilled examiner; second, that it should be public; third, that it should be partly written and partly oral; fourth, that some definite standard of attainment should be established; fifth, that such standard be uniform for the State. How can these needful conditions be met? By a board of examiners for each county, instead of each town, persons skilled in the work. They would be removed from all local influences. There would be no chance for favoritism. Establish such a board and the result would be seen at once. The schools would secure qualified teachers. The money expended in their maintenance would return adequate results. The advantage to the pupils would be infinite.

#### TEXT-BOOKS.

People complain of the cost of text-books for their children. It is in many cases a burden. No doubt there are many children in the State who are kept from school by the inability of the parents to provide the needful books. The evil com-

plained of comes from two causes, the high price of text-books, and the frequent changes. The first cannot be entirely controlled by the towns. Yet the cost may be very much reduced. Several plans have been proposed to accomplish this purpose; uniformity of text-books by State action; ownership of copyright by the State, with freedom of publication to all; and ownership of books by the town. The last seems to be entirely practicable, and subject to none of the objections which can be urged against the other plans. The towns of Bath, Lewiston, Orono, Dexter, Waterville, and perhaps others, have adopted this system. The results are, that the books cost forty per cent. less than the former price to the pupils, and that they last much longer. In fact, in every one of these towns, the expense of books under the new system is only half of that under the old plan. The town by this plan buys the books, and owns the same. They are loaned to the pupils for use during the term. The teacher keeps an account of the books taken by each pupil, and is responsible to the committee for the proper care of the same. The parent or guardian is responsible, by statute law, for any undue damage to books or loss of same. It is found by the experience of the towns named, that the books last twice as long under this system as when the parents purchase books for the pupils. This plan relieves those parents who are so poor that the price of books for their children is really a burden, and puts the burden on the property of the town.

The second cause of complaint on the part of the people, is the frequent changes of text-books. The complaint is a just one. Yet the matter is entirely in the hands of the town officers. The complaint is just, because no valid reason can be offered for such changes. No one of the half dozen series of readers, arithmetics, geographies, grammars or histories now used, or offered for use in the schools of the State, has any such superiority as to entitle it to introduction, at any cost to the pupils. The idea that the failure of the pupils to make progress depends so much upon the text-book, is absurd. The progress of the pupil depends mainly on the teacher. A

good teacher can teach well with any text-book, or without any. A poor teacher cannot teach well with any text-book. Committees who change books frequently, so as to secure better work, mistake the trouble and the remedy. The committees ought to insist on uniformity in the town. They should have that. Having secured that, they should remand the text-book question to the department of closed questions, and for ten years, at least, listen no more to the siren song of the book agent, or the entreaty of the teacher who cannot teach unless he can have a certain book. There is not a series of text-books now used in the State, except those very recently published, which has not been put out of some towns during the past few years. For instance, Hillard's readers three years since were put out of one town, and the Union readers put in. In the same year, in another town not far from the former, the Union readers were taken out and Hillard's put in. This interchange is constantly going on. It shows that the argument of great superiority is baseless; else the committees who make the change are lacking in judgment. The towns should insist that this constant change of books shall cease. Many of the books are too large, and this extra size enhances the cost. The grammars contain for the most part the text for the pupils to study, and explanations for the teacher. The explanations occupy more space than the text. They would be proper in a treatise for teachers, but are entirely out of place in a text-book for pupils. Most of the so-called language lessons contain a small amount of diluted grammar, and a teacher. The people have to pay not only for a personal teacher in the school-room, but for an impersonal one in every book. The same is true of many of the primary geographies. Arithmetics and reading books have the same fault. If a teacher cannot teach these subjects without such minute directions, the committee should change, not the text-book, but the teacher.

## SCHOOL INSPECTION.

For this important part of school work, the statute makes a certain provision in these words, "Superintending school committees shall perform the following duties: "Examine the several schools, and inquire into the regulations and discipline thereof, and the proficiency of the scholars therein, for which purpose one or more of the committee shall visit each school at least twice in summer and twice in winter, and use their influence to secure the regular attendance at school of the youth in their town." This provision is construed to mean that the committee shall visit each school twice in each term, and no more. Even this amount of inspection is not secured. The returns of superintending school committees show that one quarter of all the ungraded schools in the State received only one visit each term, last year, and that a large number of the schools were not visited at all. No town can have schools of a very high order, without constant inspection by skillful and intelligent inspectors. Many things in reference to a school can be determined only by such inspection. Certain qualifications of the teacher, and those not the least important, are exhibited only in the school-room.

We have stated, in treating of teachers' examination, some qualifications which the examination can and should determine. The possession of others can be ascertained by inspection. The committee must decide by this means whether the teacher possesses that quick and loving sympathy with children, that clear and ready perception of individual peculiarities, that ready adaptation to such peculiarities, that amiable disposition, that patient firmness, that vivacity of thought and movement, without which no really good teaching is possible. Inspection alone can reveal the faulty methods of the teacher, and afford the committee the opportunity for such wise counsel and aid as shall secure successful work. Many an inexperienced teacher, whose first attempts at teaching have been failures, would have been saved from such failures, and enabled to achieve a good degree of suc-

cess, by the aid which comes from careful inspection. Such inspection to be helpful, must be constant. The committee must be well acquainted with the school, must observe the work of the teacher carefully, must see clearly the points in which he fails, so that advice and suggestion may be judicious. Such knowledge cannot be obtained by a visit of an hour, or even a half day. Often, several days must be spent in the school.

This inspection must be done by the local officers. There is no one else to do this work. The towns should see to it that the persons selected for this work are skilled in teaching, and able to judge of methods of work. They should have a lively interest in the success of the schools, and, by professional knowledge, be able to counsel and help the teachers under their supervision. Then the law should be so amended as to secure more visits of the committee to the schools. The cost of such inspection would be repaid a hundred fold by the improved condition of the schools.

### SMALL DISTRICTS.

The question is often asked, Why, with so large an expenditure of money, and with the comparatively low wages paid teachers, the average length of the school is only twenty-one and one-half weeks in the year? The explanation is found in the wastefulness of the district system. There were several hundred schools in the State during the past year, which averaged five scholars or less; several hundreds averaged less than twelve, and one thousand averaged less than twenty. To carry on these schools costs the same for school-houses, repairs, fuel, board of teachers, &c., as for schools of forty pupils. The teachers' wages for these small schools are somewhat less than for the larger. But all other expenses are the same. In fact there was one school last winter in which the tuition of each scholar per week cost the town three dollars. Many of these small districts are so remote that they cannot be consolidated. But many can be united with other districts

without subjecting the pupils to a very great hardship in travel. It is declared by one who has carefully studied the matter, that one thousand school districts might be consolidated with others, and the expense of one thousand schools saved, without obliging any pupils to walk more than one mile. The schools thus formed would be more profitable to the pupils than the small ones they now attend. Pupils do better in schools of forty scholars than in those of ten. The example of New Brunswick may be fairly cited to show the waste of our system. That province expends a little less for each enrolled pupil per year than this State does; pays the teachers higher wages than this State does, and yet maintains schools sixteen weeks longer than the State. Maine schools average twenty-one and one-half weeks; New Brunswick schools average thirty-seven and one-half weeks. The difference is owing to the fact that the province has none of the infinitesimal districts so common in the State. Yet, the province is as sparsely settled as the State. It seems strange that Yankees should so far forget their shrewdness as to allow this waste of money to go on.

#### TEACHERS' INSTITUTES.

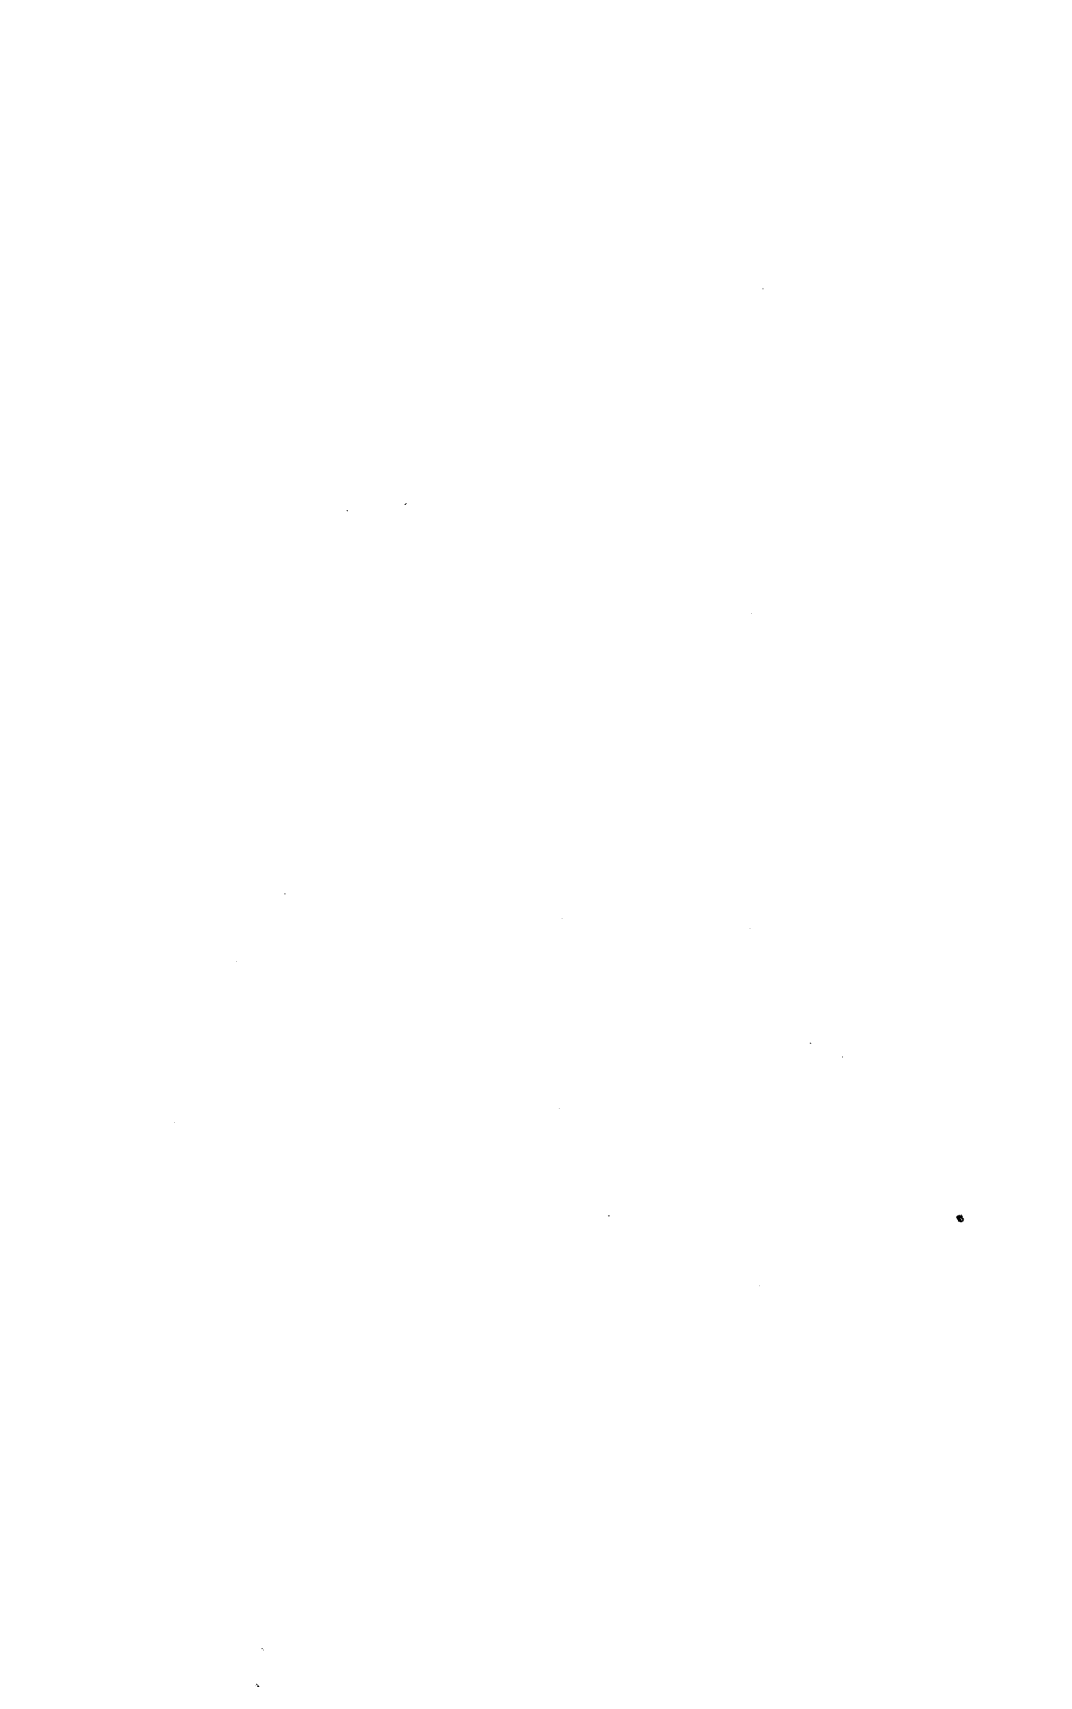

We have in this State a very large number of qualified and experienced teachers. They form an earnest, devoted body of workers, equal to the teachers of any State in the Union. They seek every means of improvement and advancement in their profession. They are to be found in all educational meetings, where knowledge of their peculiar duties can be obtained. There is another large body of teachers who having a fair knowledge of subjects to be taught, are ignorant of methods of teaching. They have had no successful experience in school management and discipline. They are learners. To this class the teachers' institute offers very great advantages. In a well conducted meeting of this kind, the best plans of teaching the several subjects would be shown, school organization would be discussed, and the best methods

of classification illustrated. The thousand difficulties which meet the inexperienced teacher would be noted, and such means of overcoming the difficulties as the practice of the best teachers have developed, would be pointed out. Such meetings have been found to be of special advantage to the untrained teachers. They are held in all the New England States save our own, and in many other States. I urge a provision by the legislature, for holding eight such meetings in different parts of the State, to continue not less than four weeks each. I believe the money so expended would yield a larger immediate return in the advancement of the schools, than an equal expenditure in any other way.

#### NEEDS.

As a recapitulation of the pressing needs of the schools of the State, I enumerate :

- More trained teachers.
- An additional normal school.
- Normal teachers' institutes.
- Examination of teachers by a county board.
- More constant supervision by the committees.
- Free text books.
- The consolidation of the small districts.
