## STATE OF MAINE.

---

EDUCATIONAL DEPARTMENT, }  
Augusta, Feb. 10, 1879. }

{ *To Governor ALONZO GARCELON,*  
*and the Honorable Executive Council:*

GENTLEMEN:—In submitting the following report on the Schools of Maine for the year 1878, at this late day, and to you instead of your predecessors, some explanation may be deemed necessary.

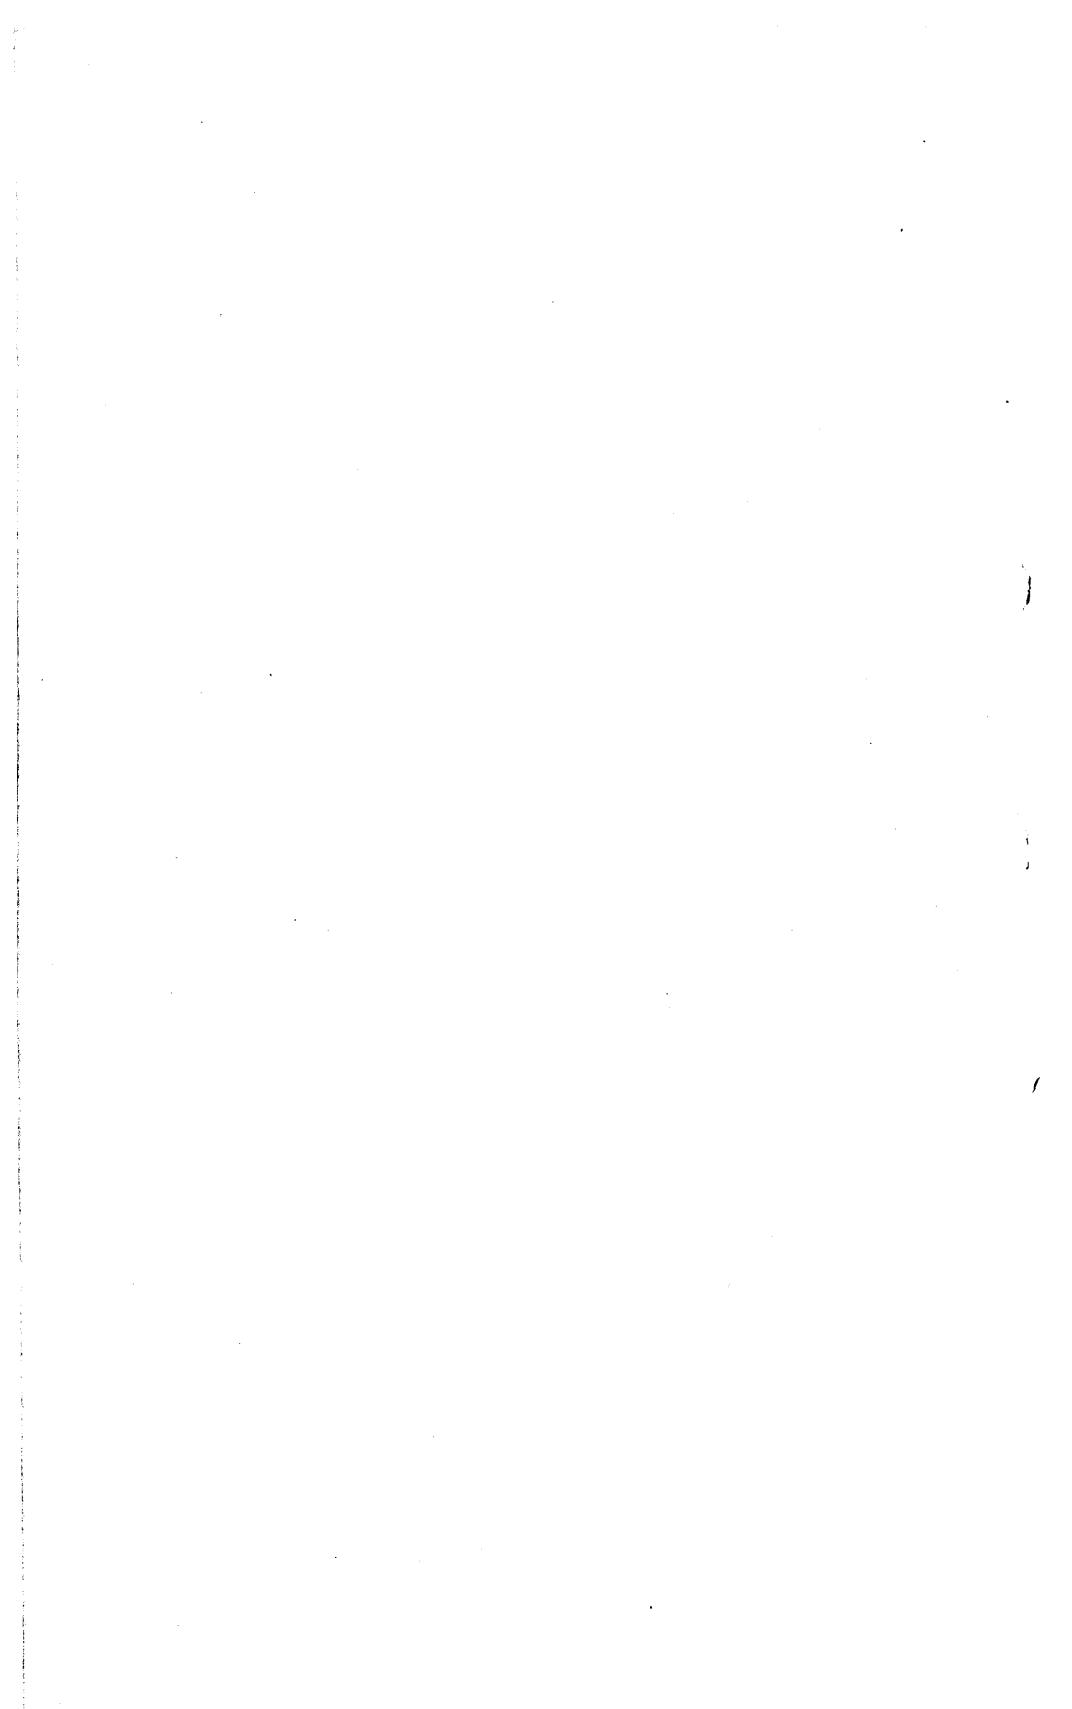

When I entered upon the discharge of my present official duties, on the 31st of December last, the Appendix hereunto annexed was found prepared and printed; but no part of the Report proper had been written. In preparing it I have had at my disposal only fragments of time left from other and more immediately pressing duties. Hence the delay in preparation, and hence any crudities that may be evident in the work.

I am, gentlemen,

Your obedient servant,

N. A. LUCE,

*State Sup't of Schools.*

# REPORT.

## COMMON SCHOOLS.

### I. THE YEAR'S PROGRESS.

The careful business man is accustomed, at stated periods, to bring all his transactions under review. In the annual "balance sheet" he so tabulates the results of his various business ventures, and so focuses them in "Profit and Loss," that a single glance reveals whether prosperity or adversity has attended him. If loss has accrued, in whole or in part, the fact there stands revealed; and he can trace that loss back to its one or many sources. And so of gain, if gain there has been. He is thus enabled to take counsel of experience, and, by lopping off here and engrafting on there, to reduce his losses and increase his future gains.

The State, through the common schools, is engaged in the great business of fitting for the general duties of citizenship, the thousands of youth within her borders. The general oversight of this great interest is intrusted to the Superintendent of Schools; its special care to the school officers of the several towns. Twelve to fifteen hundred school committee men and supervisors, exercising a more or less watchful care over the schools, gather up and report to him all the facts bearing upon and indicating the well or ill doing of seven thousand teachers, in fifteen thousand terms of school, wherein one hundred and fifty thousand children are being every year moulded into self-respecting, law-abiding, wealth-producing men and women. To him, also, annually, from the municipal officers of five hundred towns and plantations, come detailed statements of the expenditure of nearly one million dollars, under the direction of five thousand school

agents, from which statements he is to determine whether this immense sum has been legally and faithfully used for its intended purposes, or whether directed to other and illegal uses. The numerous facts, so collected from these two sources, arranged and tabulated by towns and counties, as in the appendix to this report, form what may be considered the accounts current of this immense business. Finally aggregated and summarized in one single statement, they form the balance sheet from which the year's gains and losses may be read. Such a balance sheet is the following:

COMPARATIVE STATEMENT.

ITEMS.	1878.	1877.	Increase.
Whole number of scholars between four and twenty-one.....	214,797	217,417	dec. 2,620
Number registered in summer schools.....	127,087	125,455	1,632
Average attendance.....	102,805	100,982	1,823
Number registered in winter schools.....	132,692	132,863	dec. 173
Average attendance.....	108,940	107,653	1,287
Percentage of average attendance to whole number of scholars .....	.52	.51	.01
Percentage of average attendance to number registered in summer schools.....	.81	.80	.01
Percentage of average attendance to number registered in winter schools.....	.82	.81	.01
Percentage of average attendance to number registered during the year.....	.82	.80	.02
Whole number of different scholars registered in schools during year.....	155,150	155,428	dec. 378
Average length of summer schools in weeks and days, $5\frac{1}{2}$ days per week.....	10w. 2d.	10w. 2d.	-
Average length of winter schools .....	11w.	11w.	-
Average length of schools for year.....	21w. 2d.	21w. 2d.	-
Number of districts in State.....	4,005	4,039	dec. 34
Number of parts of districts.....	344	334	dec. 10
Number of school-houses.....	4,215	4,222	dec. 7
Number reported in good condition.....	2,943	3,014	dec. 71
Number built during year.....	82	86	dec. 4
Cost of same .....	\$92,746	\$62,766	\$29,980
Estimated value of all school property.....	3,063,418	3,022,722	40,696
Number of male teachers employed in summer.....	274	228	46
Number employed in winter.....	2,280	2,253	27
Number of female teachers employed in summer.....	4,540	4,543	dec. 3
Number employed in winter.....	2,389	2,361	28
Number of teachers graduates of normal schools.....	334	314	20
Average wages of male teachers per month, excluding board.....	\$32 63	\$32 76	dec. 0.13
Average wages of female teachers per week, excluding board.....	3 98	4 14	dec. 0.16
Average cost per week of teachers' board.....	2 20	2 27	dec. 0.07
Amount of money voted by towns for common schools.....	595,173	648,584	dec. \$53,411
Excess above amount required by law .....	105,194	152,195	dec. 47,001
Average amount per scholar .....	2 58	2 53	0.05

## COMPARATIVE STATEMENT—CONCLUDED.

ITEMS.	1878.	1877.	Increase.
Amount available from town treasuries for year ending April 1.....	\$660,086	\$671,157	dec. \$11,071
Amount available from State treasury.....	337,202	347,475	dec. 10,273
Amount derived from local funds.....	19,872	24,358	dec. 4,486
Amount expended for common schools.....	936,648	951,877	dec. 15,229
Balance unexpended.....	90,205	94,198	dec. 3,993
Amount expended for repairs, insurance, fuel, &c .....	96,994	125,211	dec. 28,217
Amount contributed to prolong schools in money, fuel, &c .....	8,964	7,402	1,562
Amount paid for school supervision.....	30,339	30,814	dec. 475

The above figures show a healthy growth in the effectiveness of our common schools. Both increases and decreases indicate progress. Rightly interpreted they all show either positive or relative gains; for they evidence more and better work done, and at reduced cost, and point to healthy tendencies in educational work, which are in the nature of gains. The more important items of gain made are:

1. *In attendance.* While the number of persons of school age in the State has decreased, the attendance, both registered and average, has increased. These same conditions have marked the last ten years; but the increase in attendance this year, and decrease in the number of scholars, have both exceeded the average for those ten years. This is shown in the following comparisons:

Average yearly increase in mean registered attendance for ten years .....	1,334
Same for this year .....	1,459
Average yearly increase in mean average attendance for ten years .....	1,427
Same for this year .....	1,555
Average annual decrease in number of scholars for ten years .....	1,040
Decrease in same for this year .....	2,620

The causes which have produced these gains during the decade and the year, are not far to seek. They are more effective supervision resulting in better teaching, and a more intelligent public interest. During the last five years, also,

the Free High Schools have exerted an influence in this direction. In the towns maintaining them, they have served as incentives to pupils in the common schools, setting before such pupils a goal to be won by earnest work in preparing to enter them. So potent has been their influence that those towns in which they have been had during the present year, at a cost of one thousand dollars and less each, show a gain in average attendance during the last five years of one per cent. more than the average gain throughout the State.

2. *In better teaching.* This is indicated, first, in the facts shown regarding attendance; second, in that the schools have not increased in length; and third, in the very slight decrease in teachers' wages.

Two forces influence attendance—parental interest, and skillful teaching. The one puts the child into the school, and manifests itself in the registered attendance; the other, by arousing in him an interest in school work, creating a thirst for knowledge, exciting an ambition to excel, and throwing around him every influence that native tact and acquired experience knows, to hold him steadily to his work, shows itself in the record of average attendance. Hence any marked increase in average, over that in registered attendance, is indicative of better teaching.

In the same direction point the three correlated facts, that the schools have not increased in length, nor the wages of teachers, nor the amount expended, materially decreased. The prevailing hard times must have multiplied the number of seekers for schools by throwing out of other employments many who had formerly taught, and who would naturally seek to teach again. From the same cause many new teachers, or seekers for the position of teacher, must have been thrown upon the market. It was to have been expected, therefore, that owing to the largely increased supply, with no corresponding increase in the demand, the wages of teachers would have decreased very considerably, and, in consequence, either the schools would have as considerably

increased in length, or the expenditures for them have decreased. That nothing of the sort is shown, can be accounted for only on the assumption that those having the charge of them, have sought to improve the quality rather than to increase the quantity of work done.

3. *In an increased and more intelligent popular interest.*

Under forms of government, and a consequent social organization, like ours, the relations between the public schools and public opinion are very different from those in monarchial countries. The Prussian schools, for instance, which have long been noted for their excellence in organization and in results, are outgrowths, not so much of popular intelligence, as of the intelligence of the few. They form and mould popular opinion instead of themselves being formed and moulded by it. They are mainly the direct outgrowth of the best thought and intelligence of professional educators, under whose arbitrary control they are. They are for the people, rather than of them. With us, on the contrary, they are both of and for the people. Of the people, under their immediate control in many respects, and but little removed from it in any respect, they reflect rather the average educational intelligence of the many, than that of the few professional educators. Hence their improvement, labor as educators may in their behalf, must measure, and be measured by, popular progress in educational intelligence and interest. And so it comes to pass that any direct evidence of improvement in the public schools, proves an antecedent improvement in popular interest and intelligence; and any evidence of growth in popular interest and intelligence, foreshadows a consequent improvement in the schools. Any gain, therefore, whether in quantity or quality of work done, such as is shown in the above statement and analysis, points to a corresponding gain in intelligent public interest, and augurs continued progress.

The other items in the above statement indicate, likewise, the healthy condition of the schools, and of public interest in

them. And it is safe to conclude that they are doing well the important work set for them to do. But they are evidently yet far from what they ought to be, and can be made; and this brings us to consider,

## II. THEIR PRESENT NEEDS.

1. *Reduction in number of schools.* From the undue multiplication of school districts we are annually compelled to a greatly wasteful expenditure of school money and educational forces. In the Summer schools 127,087 pupils have been taught by 4,814 teachers, giving an average of twenty-six to each teacher; and in the Winter schools 132,692 pupils by 4,669 teachers, giving an average of twenty-eight to each. Since in these are included all the large schools of the cities and large villages, it is evident that the thousands of rural schools must show far smaller averages than the above,—that there must be very many districts whose schools, both summer and winter, will average each less than a dozen pupils in attendance. And this evil, for it is a serious evil, is constantly growing. While the number of persons of school age in the State, during the past ten years, has decreased 10,403, the number of teachers in Summer schools has increased 384, and in Winter schools, 842.

This condition of things is a two-fold evil. It results in short, poorly taught, and ineffective schools. These weak and small districts, receiving school funds in proportion to the number of scholars in their limits, are compelled to employ cheap and poorly qualified teachers, or to have schools too short to be of any value. Then, too, there must be wanting that interest in school work, that spirit of emulation which comes from the strife to excel, created by large classes. Hence "small and backward" has become a commonly applied expression descriptive of such schools.

A second evil resulting from the condition of things now under consideration, is the multiplication of poor and ill-furnished school-houses. Of the 4,215 school-houses in the State only 2,972 are reported in good condition, and, hence,

1,243, or more than one in every four, are in poor condition. While during the ten years past there has been a marked improvement in this direction, there is still large room for further improvement. But such further improvement, under the present conditions, must be a slow and difficult process. What with the already heavy burdens of State, county and municipal taxation, the additional weight of school district taxes for the thorough renovation of these poor school buildings, coming, as it naturally must in most cases, upon the poorer classes in the towns, who are comprised in these poorer districts, would be a very grievous and oppressive burden.

The third evil is the unnecessary expense entailed. I am fully of the opinion that—leaving out of the account the cost of building—the expense of keeping in ordinary repair and of warming unnecessary school-houses, and the sums paid for the board and wages of teachers who could be dispensed with if every town in the State could be properly redistricted, amount to at least one-fourth of our annual school expenditure.

A judicious re-arrangement of the school districts then, or, better still, their entire abolition, is a thing much to be desired. It would give us larger and longer, more interesting and more profitable schools. It would put those schools under the charge of better teachers, in better school-houses better furnished with the appliances for better work, and all at very much less expense than is entailed by the present unfortunate condition of things.

2. *Better Teachers.* The schools are to fit for the active duties of life. They are to impart such knowledge and give such training as will prepare those receiving their benefits for the activities that wait them when their school days are past. As those activities vary from generation to generation, the methods and the work of the schools must change. Very different are the conditions of life to-day from those of the generation past, and from those of the generation to come.

Hence the education, the knowledge, the training that fitted our fathers for the work awaiting them, will not best fit the present generation of children for the wider and more varied activities that wait them in the life for which they are receiving preparation. The schools of to-day, then, must give a wider range of knowledge than those of the past. And while giving more extensive knowledge, they must give more skillful training to all the mental powers. Capacity to think rapidly and logically, to form correct decisions at short notice, to see the main chance at a glance and take that chance, is more and more demanded in all the activities of modern life. And he who would keep abreast of his fellows in the sharp contest for place or profit, who would not be a laggard in the race, must enter active life with powers developed and strengthened by systematic training.

Nor is it knowledge, and discipline of the mental powers alone, that the schools should give. In the feverish bustle and hurry and push of our modern life, temptations to diverge from the straight line of integrity are met with at every step. To resist these temptations always, and under whatever guise they present themselves, calls for steadfast integrity that can come only from educated moral perceptions, from a conscience quickened into ceaseless activity, and from a love of the right, grown with the growth, and strengthened with the strength of childhood and youth, into the perfection of moral character. The times demand, then, that the schools shall be, more than ever before, nurseries of purity, morality and uprightness of thought and action.

But the work outlined above is to be done under conditions different from, and less favorable than in the past. Owing to certain social conditions, not necessary to analyze, which have obtained for the last twenty years at least, the average time during which pupils continue in the schools, has diminished from four to five years. Previous to twenty years ago it was the almost universal practice, in the country districts at least, for young men and women to attend school till

their majority; now they are rarely found in them after they are sixteen or seventeen years of age.

Of this changed condition of things the following figures give conclusive evidence:

Average yearly number of scholars in State for five years, including and following 1850 .....	228,297
Average number of same for last five years .....	219,275
Decrease .....	9,022
Average yearly number registered in Summer schools for first period .....	122,394
Same for last period .....	123,861
Increase .....	1,467
Average yearly number registered in Winter schools for first period .....	147,158
Same for last period .....	131,627
Decrease .....	15,531

That is, with 9,022 less scholars in the State each year of the last period than of the first, there were in attendance upon the Summer schools 1,467 more pupils; but upon the Winter schools, in which chiefly would be found those between the ages of sixteen and twenty-one, 15,531 less attended.

The problem is, then, to make the common schools impart more knowledge, and give a more systematic mental and moral training, in at least four years less time than formerly. And the solution of this problem is rendered still more difficult, by the fact that these four years are taken from that portion of the pupil's school life, during which he is best fitted to do the work of the school—when his powers have become matured by age.

We need, then, better teachers. We need to do the important work of the schools—work vital to the well-being of the individual and society—men and women in the full maturity of their powers. They should be possessed of wide and thorough knowledge of the things to be taught, trained to facility in imparting that knowledge to others, versed in the

laws of mental and moral growth, and endowed with power, both natural and acquired, to bring every possible force to bear upon their work. They should be, too, men and women of the purest character, who realize the full importance of their calling, and all the high responsibilities it devolves upon them. Such are not, however, the majority of the teachers in the schools to-day. To secure them we need,

3. *Better Supervision.* Supervision is a broader term than inspection. It selects the teacher, examines into his fitness, supplies him with the appliances for his work, directs him in it, and carefully watches that he does it well and brings forth desired results. In our system these several specific duties, which are so related to each other that, in order to obtain the best results, they should be performed by the same man or board, are unfortunately divided between the district agents and the school committee, or supervisor. The responsibility for the selection of fit teachers, and for the best attainable results in the schools, thus divided, is so weakened as, in most cases, to be of little force. The committees, not held accountable for the employment of the teachers, naturally feel less responsible for their fitness, examine less carefully into their qualifications, and watch less vigilantly over their work. The result is that the teacher's desk is filled far too often by personified incompetency, far too often by men—and women sometimes—whose personal habits and moral character would better suit the bar-room or the brothel.

In order to have fit teachers, then, we need a revolution in our system of employing, examining and certificating them. They should be employed by the town committees or supervisors, who should be held by an intelligent public opinion to the strictest accountability for the results, and should, therefore, have the power to decide upon their special fitness for special schools and special work. Their general fitness as to extent of knowledge, professional skill, and moral character, should be determined by some agency as far as possible removed from any tendency to personal favoritism, and whose

decisions, from the very character of that agency, would carry with them an authority recognized throughout the State. Such an agency could be found in county or State boards of examiners, either appointed by the Governor and Council, or elected by and from the various town boards in each county.

In the mean time, till public opinion shall have become educated to the point of demanding the better system of supervision suggested above, or some other system still more effective, school agents and school committees should be awake to a conscientious performance of their duties. In the selection, the examination and certification of teachers, the sole object should be to "get the best." Favoritism, nepotism and self-interest in any form, should have no influence here. Especially should committees set their faces like flints against granting a certificate to teach to any person—no matter whose son or daughter, nephew or niece, or wife's relation he or she may be—who is not thoroughly qualified in knowledge, and in character and reputation, for the post of teacher. They should make no compromise with incompetence or immorality. Especially, also, should they be critically and jealously watchful over the work of the schools under their charge; be helpful in suggestion and advice when needed, but be satisfied with nothing less than the most thorough and conscientious work.

4. *Increased facilities for preparing teachers.* The requisite preparation for teaching is two-fold in character—preparation in knowledge, and preparation in professional skill. Any school system which fails to make provisions for such preparation, is radically defective. For this work, in our system, we have our Free High and Normal Schools. The former, theoretically, are to give knowledge; the latter, professional training. But, from the necessities of the case, each must trench somewhat upon the province of the other.

The Normal Schools, worked to their utmost capacity, can not fill the schools, and keep them filled, with thoroughly trained teachers. The Free High Schools do not, as they

might and ought, extend their privileges of a culture such as is essential to the teacher, and can not be had in the common schools, to all who will enter upon the teacher's work. The former must, therefore, fill up the gaps in the imperfect literary acquirements of those seeking professional training in them ; the latter should give something of professional preparation, if in no other way, by affording in their own work models of the best methods in organization and instruction.

For the instruction of the Free High Schools, then, the very best of teaching talent should be secured. Teachers who, to professional training in the Normal Schools, can bring to their work the added preparation of successful experience, should be especially sought. And all friends of the common schools, all desiring for them better teachers, should labor to multiply the work of the High Schools, by extending the sphere of their usefulness more widely through the State. Nor should any effort be spared to keep the Normal Schools filled with the best prospective teaching talent in the various sections of the State within reach of them.

To the Normal and Free High Schools should be added the third instrumentality for securing skilled and enthusiastic teachers—that of the teachers' institute. A thousand dollars annually, judiciously expended in this way, would pay large profits in the increased efficiency of the schools. No body of persons engaged in the same vocation, coming together even for a day and discussing their work, can fail to get added inspiration and zeal for future effort. Then, too, the mutual interchange of views upon methods of work, the comparisons of actual experiences, the pithy, practical suggestions, and the formal discussions of doubtful, and exposition of approved forms of procedure, must give to all participating, knowledge attainable in no other way. Indeed, no agency for infusing life, enthusiasm and skill into the work of the schools, has ever been found more potent, considering the cost, than institute work of the kind indicated above.

### III. EXPENDITURES AND TAXATION.

1. *Can we reduce?* In view of the present condition and tendencies of the times, it becomes pertinent to inquire whether or not, and how, our expenditures and consequent taxation for common school purposes, can be reduced, and whether any legislation in this direction is advisable. Leaving out of the account the reduction that could be made by reducing the number of schools through the consolidation or abolition of school districts, the answer to this inquiry must depend on present conditions and future contingencies. If it can be demonstrated that our schools are too long, or that we are extravagant in expenditures, or that under the existing laws our school resources are to suffer no diminution, it will be evident that we can and must reduce our rate of taxation for schools. How stands the case?

*First.* As to length of schools: During the last two years the average length of the school year has been twenty-one weeks and two days. The statistics for the past year,—which do not appear in the appendix to this report, but which have been collected from every town in the State—show that the graded schools of the cities and larger villages, have averaged thirty-two, and the ungraded schools in the country districts, sixteen and four-fifth weeks nearly. In view of the work which the schools have to do, and the conditions under which that work must be done, this average would seem none too large—not large enough rather—and a comparison of ours with other States, supports this view. In the last report of the National Bureau of Education, Maine ranks as the twenty-first State in length of schools. Our sister Provinces of the Dominion are far ahead of us too, New Brunswick and Ontario giving their children thirty-seven weeks schooling per year; Nova Scotia, thirty-three; and Quebec, thirty-one.

*Second.* As to expenditures: Are we extravagant in any respect, and if so, in what? Do we pay too high wages to teachers? Twenty-four other States pay higher for male, and thirty-two for female teachers. Indeed, the wages paid

in Maine are so low that our best teachers are constantly leaving us to better their condition. Do we pay too much for their board? On two dollars and twenty cents per week, on the average, they cannot "fare sumptuously every day." Are we wasting money in repairs and furnishing of school-houses? The fact that one in every three is reported in poor condition, and that not one in twenty is supplied with map, chart, globe or any other school appliance of the sort, would seem a sufficient answer. In short, that we are not making extravagant expenditures for common school education, is proved by all the facts and comparisons attainable.

*Third.* As to future revenues under existing laws: Our school revenues are of two classes—municipal and State. The municipal appropriations—exclusive of the income of local funds in a part of the towns, aggregating some \$20,000—amount for the current school year to \$595,173, which is \$105,194 in excess of the requirements of law. The same appropriations for the preceding year were \$648,584, and for the year preceding that, \$657,705, showing a decrease in three years of \$62,532. With this tendency toward reduction in municipal appropriations, and the considerable margin still left therefor, it is fair to assume still further reductions.

The State school revenues are made up from three sources—the mill tax, a moiety of the tax on deposits in savings banks, and the income of the permanent school fund.

The mill tax is based on the decennial State valuation, which is to be readjusted during the current year. The present valuation, based on the inflated values of ten years ago, is probably in excess of what the next will be. Hence, a decrease in the amount of the mill tax is to be expected in and after 1880.

The school revenue from the second source has fallen off, during the last five years, from \$131,296 in 1873, to \$116,059 for the current year, with the probabilities that for the coming year it will not exceed \$95,000. This diminution has been owing to several causes, among which the most potent have

been doubts of the solvency of these institutions, and the force of the hard times, both operating to prevent further deposits, and to compel the withdrawal of those already made. And now another force acting in the same direction is beginning to make itself felt. The new four per cent. U. S. bonds of small denominations, offering, with other advantages, an absolutely safe investment, are absorbing not only present surplus earnings, but those already hoarded in the savings banks. The revival of business, moreover, will naturally make still further drains upon these hoards, calling them out and directing them into the channels of trade, and into various productive industries. The indications, then, are that these school revenues must still continue to decrease.

The permanent school fund will hereafter receive no material increase, unless further provisions are made therefor. The public lands of the State, from the sales of certain portions of which this fund has been growing up, are now completely disposed of. Hence the revenue from this source will continue what it is at present—about \$25,000 per annum.

With schools none too long, then, with wages of teachers averaging so low that we cannot even retain in the State the services of our best talent, with no wasting of funds in repairs and furnishing of school buildings, and with a probable considerable diminution of school revenues in three out of four sources thereof, as at present provided for, it should be a very pressing public necessity that should compel any reduction in school taxation. Still, in view of the fact that such reduction is mooted, and very strongly urged in various quarters, it seems fitting to inquire,

2. *In what direction shall we reduce?* The taxes directly imposed by existing laws upon towns for the support of common schools, are of two kinds, viz :

1. The local, town, or *per capita* tax, so called, amounting in each town and organized plantation to a sum not less than eighty cents to each inhabitant thereof, according to the census by which representatives to the legislature were last apportioned. It is assessed, like other town taxes, upon the

polls and estates therein. It varies in rate in different towns and sections of the State as the ratio between valuation and population varies. For example, Portland is required to raise a tax of this kind amounting to eighty-five cents on every thousand dollars of its State valuation, and Oakfield plantation in Aroostook county, one of nineteen dollars and forty-two cents. If it be a correct principle that, so as practicable, all taxes for public purposes shall bear equally upon all sections, this *per capita* tax must be considered inequitable in the highest degree.

2. The Mill Tax, assessed annually in the State Tax upon all towns, plantations and wild lands, in proportion to their State valuation, and by towns and plantations included in the taxes by them annually assessed upon the polls and property therein. For the current school year it has amounted to \$224,481. Of this amount towns have contributed \$218,288, plantations, \$1,193, and wild lands, \$5,000. It is apportioned by the State Treasurer to towns and plantations annually, according to the number of persons therein between the ages of four and twenty-one years, as existing on the 1st day of April, and by the superintending school committees thereof returned to the State Superintendent of Common Schools. For the current year the sum of \$218,513 has been apportioned to towns, and \$5,968 to plantations. Of the 424 towns in the State, 92 have paid into the State Treasury on account of this tax, larger sums than they have received from it on the same account. Its abolition, therefore, would somewhat lighten the burdens of taxation in such towns; burdens which, however, so far as imposed by law for school purposes, now average considerably less than in the other 332 towns. But, on the other hand, in these other towns it would either materially diminish school privileges without lightening their burdens, or impose upon them burdens still heavier. In short, the abolition or diminution of this tax would lighten burdens where they are now lightest, by imposing still heavier upon those towns now most heavily weighted.

The following table exhibits in detail the differences in rate of taxation for school purposes under existing laws:

## COUNTY OF ANDROSCOGGIN.

TOWNS.	Population, census 1870.	State valuation, 1870.	State tax on account of mill tax.	Received from State treasury for mill tax.	Local tax im- posed by law for common school purposes.	Rate of local tax per \$1,000 of State valuation.	Rate of local and mill tax combined per \$1,000.
Auburn.....	6,166	\$2,918,101	\$2,918	\$2,835	\$4,933	\$1.35	\$2.35

From the foregoing exhibit it would seem that, if any reduction must be made in the amounts to be raised annually for the support of our common schools, such reduction should affect the *per capita* rather than the mill tax. And this, first, because such reduction would lighten burdens where they now rest heaviest; second, because it would relieve the larger number of tax-payers; third, because it would still more nearly equalize taxation for school purposes; and, fourth, because it would not so much injure the schools, since the *per capita* tax fixes only the minimum to be raised, and leaves it for the people to raise more, if they see fit to do so.

#### FREE HIGH SCHOOLS.

The second general grade in our public school system, is the Free High School. Its purpose is to supplement the work of the common school, by giving a fuller training, and a wider range of instruction, than the latter can give; and to link it, on the one hand with the Normal School, and on the other with the seminaries and college preparatory schools. It is essentially and emphatically democratic in its tendencies and results, affording, as it does, to every community that will adopt it, the means for counteracting the tendency of the wealthy to become the ruling class through the force of the higher culture which wealth can easily secure, but from which poverty unaided is shut out. In it the son of the laborer and the son of the bond-holder meet on the same level. It gives to the former, in fitting him to enter upon the work of teaching, or other avocations calling for more knowledge than the common schools can impart, a lever by which he can if he will, clear from the path of his future progress every obstacle, and keep pace with his fellows more fortunate in birth and station.

It was to have been anticipated that, owing to the hard times which have marked the past year, the number of Free High Schools in the State, and the amount expended for their instruction, would have shown a marked decrease. The

annexed statistics, and comparative summary thereof, show that such anticipations were not well founded. And the fact that there has been no material decrease, either in the number of such schools, in the pupils attending them, or in the amounts expended for them, is conclusive evidence of their popularity, and that they are doing a work which the people will not willingly have left undone.

There is, however, an evident purpose to attack these schools, and, if possible, to eliminate them from our system. The success of such a purpose would be most unfortunate for the educational interests of the State. It would act to the serious detriment of both the common and the Normal Schools, as indicated on a preceding page; and it would prove a disadvantage to the higher seminaries under denominational control. Better than to abolish these schools would it be to take the amounts necessary for their support from the State funds now devoted solely to the support of the common schools.

For further information regarding these schools, attention is called to the following statistics:

## FREE HIGH SCHOOL STATISTICS.

---

*Abstract of returns for the year ending December 1, 1878.*

TOWNS.	Total amount expended for instruction in Free High Schools.	Amount provided by towns or districts for instruction of same, by taxation, donation or bequest.	Amount unexpended from last year's appropriation.	Amount received from tuition.	Am't paid from State Treasury.	Number of terms of High School.	Length of High School in weeks.	Wages paid teachers, including board, per month.	Whole number of pupils registered.	Average attend-
										ance.

## NORMAL SCHOOLS.

The Normal Schools have been attended with their usual success during the year. From each of the two older schools have gone out fine classes of trained teachers,—live, enthusiastic, cultivated young men and women, whose services to society, through their work in the schools, no money value can measure. And besides those graduating, larger numbers of under-graduates have gone out from them, for longer or shorter terms of service in the schools before returning to finish the work of preparation. Such have carried into their work as teachers, a better knowledge and deeper sense of their responsibilities, and a greater skill in the details of school work, which richly compensate, in good to the State, for all the cost of their tuition.

It is a mistaken idea which measures the value of these schools by the number of graduates from them, or even by the number of those who have been connected with them as pupils. The great mass of our younger and less experienced teachers, build up their methods after the models of those who made upon them as pupils the latest forcible impressions. Every good teacher thus multiplies himself, to greater or less extent, in every pupil who passes from under his immediate influence and training to the teacher's desk. And so the influence of the Normal Schools has made itself felt, in greater or less degree, since their establishment, in nearly every school-room in the State. Many a teacher to-day, who has never seen a Normal School, nor even a graduate from one, owes his success and reputation to normal methods of work, so general has been the influence of these institutions.

The annexed reports of the Secretary of the Board of Trustees, and of the principals of these schools, give full details of their condition, work and wants. In most, if not all the views therein expressed, I heartily concur. Especially do I concur in the suggestion that their courses of study be so modified that pupils having the proper literary qualifications, may graduate from them at the end of one year. In order to do this there should be two courses, each complete in itself, and yet so related that the longer shall be the supplement of the shorter.

This or some similar modification is rendered necessary by the opening of the new school at Gorham with a one year's course, and the consequent liability of that school to trespass on the ground now occupied by the other two. Whether the modified courses shall be general to the three schools, or shall affect only the two older ones, time and experience will show.

Since the annexed report of the Secretary was made, the Gorham school has begun its work under auspices more flattering than even its most hopeful friends anticipated for it. At this writing about eighty pupils are in attendance, with

prospects that the full number for the present term, will reach nearly or quite a full hundred. Started on the two-term plan, so that, when fully established, two classes shall enter and two graduate each year, the number thus entering this first term indicates for the school a career of usefulness that shall fully prove the wisdom of its establishment. And to such a career every circumstance of situation and organization is favorable. It is easy of access, and in a community whose zeal for its success is indicated in the magnificent endowment which it has bestowed upon it; is in the very heart of the most populous and wealthy section of the State; is thoroughly equipped for its work; has connected with it a large and commodious boarding-house, so managed as to furnish board at much less than the average rates; and is under the charge of a principal whose reputation for culture, and as an educator, is more than State wide, and who has under him a carefully selected corps of assistants of proved fitness, and of experience in their several departments.

Besides the schools for professional training here reported, another of far more modest pretensions, but destined to do a very important work, has been inaugurated and is now in successful operation. By an act approved February 21, 1878, the Legislature provided for establishing a training school for teachers in the Madawaska territory, so called, and further provided that, for its support, the sum of \$1,000 should be deducted and set aside as a fund in the State Treasury, from the school funds appropriated to the several municipalities included in that territory, and enumerated in the act. The reasons for establishing and maintaining, for a time at least, such a school are to be found in the peculiar character of the people of this section. They are almost wholly French and French speaking. To Americanize them, to bring them out of their isolation in character, modes of life and of thinking, and make them, as far as possible, homogeneous with the population surrounding them, has been the purpose of various educational experiments since 1857. To teach these people, with other necessary things, to speak and read English, and

thus break down the barriers between them and the "outside," has been found a difficult thing to do. Such work requires teachers versed in the ordinary branches to be taught, and also able to speak and read both languages. To secure such teachers in sufficient number, who could afford to work for the small pay made necessary by the comparative poverty of the section, has hitherto been practically impossible. Hence the educational progress of the section, while, perhaps, as great as could have been expected under the circumstances, has not been commensurate with the expenditures made. In view of all the circumstances of the case, and after a somewhat careful personal examination of the schools in most of the towns and plantations comprised in the section, the one thing needed seemed to be some special agency for training up a special body of teachers from the native population. Hence the Madawaska training school.

The school was opened September 30, at Fort Kent, under the charge of Mr. Vetal Cyr, assisted by Miss Mae B. Morrill. Mr. Cyr is a native of that section, was educated at Houlton Academy and the State College, and has had a successful experience as teacher in some of the best schools of Aroostook county. Miss Morrill is a graduate of the Farmington Normal School. Both teachers are well fitted for their work. During the first term, ending December 20, forty-six pupils were in attendance, and so thoroughly interested in their work that the daily attendance for the term reached the very high average of forty-four. All pursued the common school studies named in the statutes, with the exception of Physiology and Book-keeping, using English text-books; and special attention was given to training them to speak and think in good English. After the close of the present term of twelve weeks, the school will be transferred to Van Buren, where two similar terms will be had under the same teachers. It is doing so promising a work that I most strongly advise its continuance for at least two consecutive years longer, and after that on alternate years. I would further advise that, as

a matter of equity, it be placed, as to the funds for its support, on the same basis as the other Normal schools.

For further information attention is called to the following reports of the Secretary of the Board of Trustees, and of the principals of the several schools :

FARMINGTON, Dec. 1, 1878.

To HON. W. J. CORTHELL,

*State Superintendent of Common Schools:*

The annual report of the condition of the State Normal Schools is herewith respectfully submitted by the Secretary of the Board of Trustees :

The attendance during the school year has been as follows :

Western Normal School—Fall Term, 106; Spring, 148.

Eastern Normal School—Fall Term, 85; Winter, 59; Spring, 137.

After a careful inspection of the building at Castine by a competent architect, the safety of pupils and teachers, as well as the preservation of the building itself, demanded extensive repairs, which have been completed during the year. The building is now in good order, and it is hoped no further repairs will be found necessary for several years.

The school building at Farmington is in good order. The present season a new fence has been built on two sides of the ground, and all the rooms and halls have been newly varnished.

In each school additions have been made to library and apparatus, and both are in good condition in these respects.

In accordance with the act passed by the last legislature, establishing "an additional normal school," the Trustees early last spring met at Portland, and thence proceeded to Gorham. After a careful inspection of land and buildings belonging to the Gorham Seminary Trustees, and listening to the proposals made by the Gorham people, it was voted "to locate the new normal school in Gorham, on the McLellan lot." A committee, consisting of Governor Connor, Supt. Cortell and S. T. Pullen, was created to represent the Board of Trustees in all matters connected with location and construction. The new building is now nearly completed and ready for occupancy, and early in the new year the Gorham Normal School will be put in operation, with a first-class corps of teachers. In justice to the Gorham people, it should be stated that they have from the outset shown a desire to follow strictly the wishes of the Trustees, in all matters pertaining to the location and erection of the new building, and, also, in the repairing of the old seminary building. Their munificent gift, whereby the State receives for educational purposes buildings and grounds valued at no less than *forty thousand dollars*, has established and richly endowed an institution which we believe will be no less the pride of Gorham in the future than the old academy and seminary have been in the past. This school, located in a town noted alike

for its culture and hospitality, in the wealthiest and most populous section of the State, is destined to become in our educational system all that its benefactors and friends have anticipated.

By the liberality of the people of Gorham a magnificent edifice has been erected for school purposes, and a large boarding-house fitted up for the use of young ladies attending the school. The two lots of land on which the buildings are situated, contain eight acres. The town of Gorham raised by vote for the school the sum of \$15,000; private individuals residing in town contributed \$8,000; the Trustees of the seminary gave their fund, amounting to \$5,000, also the real estate and other property belonging to the Gorham Seminary, valued at \$12,000,—making in all a total of \$40,600, which in due time will be formally conveyed to the State.

D. H. KNOWLTON, *Secretary.*

STATE NORMAL SCHOOL, }  
Farmington, Me., Nov. 1, 1878. }

To MR. D. H. KNOWLTON,

*Secretary of Board of Trustees of Normal Schools:*

I herewith submit the annual report of this school for the school year 1877-8.

The number of pupils for the fall term was 106; for the spring term, 148.

The following text-books were used during the year: Walter Smith's Drawing Books, Hillard's and Sargent's Readers, Hutchinson's Physiology, Harper's Geography, Maury's Physical Geography, Dana P. Colburn's Common School Arithmetic, Greenleaf's Elementary Algebra, Evans's Geometry, Bryant and Stratton's Book-keeping, Whitney's Essentials of English Grammar, Eliot's United States History, Gray's Botany, (How Plants Grow,) Norton's Physics, Steele's Physics, Hooker's Chemistry, Jardine's Psychology, Wickersham's School Economy, Herbert Spencer on Education, Currie's Infant School Education, Currie's Common School Education.

The apparatus is in good condition. Some additions have been made by purchase, and some most useful pieces of apparatus have this year been made at home. Some further very desirable additions will be made this term.

Our library has been increased to a small extent. Although it contains only about one thousand volumes, these are so carefully selected that it proves invaluable, not only in the daily work of the school, but as a means of cultivating the taste of the pupils and giving them that practical acquaintance with books and with authors which will enable them in after life to choose and to read wisely. It would be greatly to the advantage of the school to require each term the payment of a small library fee, to be devoted to the purchase of new books. The library would then be in constant growth, and would thus, better than in any other way, be adapted to the developing wants of the school.

The school-house is in good condition. It has this term—fall term, 1878—been re-varnished throughout.

In several successive annual reports I have recommended the addition of an optional advanced course of one year. A portion of our pupils desire this very much, and, quoting from my report of last year, "I can only renew the repeated expressions of former years that such a course is greatly needed as a relief to our present crowded course of study, as a means of training some of our pupils to a higher degree of culture and efficiency, and also as a means of furnishing to all our pupils additional facilities for distinctive professional training."

The Board of Trustees, at their annual meeting last July, ordered that the Model and Training School be re-established in the building of the Normal School and under its control. It was very difficult to find a suitable teacher, and the school did not open till the Normal School had been in session several weeks. Arrangements were finally made with Miss Olive Hambly, a graduate of the Normal School of Washington, D. C., and a teacher in the public schools of that city, to take the position. The public school authorities of Washington declined to accept Miss Hambly's resignation, but gave her leave of absence for one year on condition that we send a first-class teacher to take her place. The Training School is now in highly successful operation under Miss Hambly's instruction, and our pupils are once more gaining a practical acquaintance with the best methods of teaching a primary school. I take pleasure in stating that Miss Hambly's former position in Washington is now successfully filled by Miss Clara M. Woodward, a member of the last class graduating from this school.

We have been fortunate throughout the year in the general good health of teachers and pupils, and in the earnest and successful work of the school.

Respectfully submitted.

CHARLES C. ROUNDS.

STATE NORMAL SCHOOL, }  
Farmington, Me., Dec., 1878. }

To HON. W. J. CORTHELL,

*State Superintendent of Common Schools:*

I herewith present my annual report of the Western Normal School, in accordance with the requirements of law.

For most statements in regard to the condition of the school, I would refer to my report to the Secretary of the Board of Trustees.

The numbers in attendance during the past year were, in the Fall Term, 106; in the Spring Term, 148. At the close of the Fall Term a class of 12 was graduated from the school, and at the close of the Spring Term a class of 27. Nearly all pupils come to the Normal School with the well defined purpose of fitting themselves for teaching, and for some years such has been the regularity of attendance that nearly all are present at the opening of the term and but few leave before its close.

Our school year consists of thirty-eight weeks, divided into two terms. The entire course is two years. Most of our pupils come from the common schools of the State, and their previous educational advantages vary widely. Many of them, upon the completion of their course, exceedingly desire the privilege of further study for one year in the Normal School. To the young men this is a matter of vital importance, as without this further study very few of them can teach high school, and only by teaching these schools for a part of the year can they in any proper sense of the word devote themselves to teaching. Those graduating from the Normal School, prepared to teach high schools, usually obtain employment for at least three terms in the year, and thus make teaching a business; those not thus prepared can teach only winter schools, and soon leave teaching, of necessity, for some other calling. I believe it would be greatly to the advantage of the Normal School and of the State to establish an optional advanced course of one year, to enable us to meet the demand made upon us by the passage of the Free High School bill.

In the establishment of the Normal School the State declares special preparation for the duties of the teacher to be necessary. In consequence of the failure to take next the logically inevitable step that the teacher shall *in some way* obtain special preparation for his work, the cause of education in this State suffers grievous wrong. It is not to the credit of the State that the diploma of a Maine normal school is to-day worth more to one of its graduates in California than in Maine; that for want of any system of examination for admission to the business of teaching, there is now in our State no standard of qualification for teachers, and that those most carefully trained are so often lost in a mob of incapables who attempt to teach because they are fit for nothing else, and who find employment because they underbid all others.

There is urgent need of an entirely different mode of certificating teachers, and no great improvement in the condition of the common school seems possible till it is adopted. But this subject I consider quite fully in my last year's report, and need not repeat in this. A wise

economy, an enlightened self-interest, will certainly dictate that some means should speedily be taken to give the profession such recognition and remuneration at home as will stop the exodus of our best teachers to other States.

Respectfully submitted.

CHARLES C. ROUNDS.

STATE NORMAL SCHOOL,  
Castine, Me., November 1st, 1878. }

DAVID H. KNOWLTON Esq.,

*Secretary of Board of Trustees:*

DEAR SIR:—I submit my report of the school year ending June 12th. The number of pupils attending the fall term was eighty-five; winter term, fifty-nine; spring term, one hundred and thirty-seven. Three terms comprise the school year: From third Tuesday of August, 14 weeks; from second Tuesday of December, 10 weeks; from last Tuesday of February, 14 weeks. Students are graduated at the close of any term when their work is finished.

In order that the Normal Schools may be of the highest value to the State, it is necessary that pupils be induced to take a full course, through the influence of a prospect of remunerative employment in the public schools after graduation. A more thorough system of examination of teachers will tend to produce this result.

As it is very desirable that pupils be connected with the Normal School at least one year, I suggest to the Board for consideration the desirability of a short course of one year, including the branches taught in common schools, with a thorough drill in the theory and practice of teaching. Advantages: Many pupils who now take but one or two terms will complete a year; many who complete the short course with high rank will take the full course. More pupils will enter the Normal School and more good teachers will go from it.

The school has an excellent library for general and professional reading, and many of the text-books used in the school are loaned to the pupils. The philosophical apparatus is in good condition. The chemical laboratory has a large table covered with lead, furnished with tanks, drawers, water, pipes and chemicals. After the students have received some instruction in theoretical chemistry, they are given practical work at the table in experimenting. As improvements are constantly being made in school apparatus, and valuable books are published from time to time, a small yearly appropriation for books and apparatus is more to be desired than larger appropriations made at long intervals of time. The supply of maps and charts is ample.

The building has been most thoroughly repaired and strengthened. The slate was taken from the roof, which leaked badly, and first quality shingles put on. The walls have been painted. The house now is very substantial and further expenditure will not be required for many years. The steam-heating apparatus has been kept in good condition, and by the

constant care of an efficient janitor, the building can generally be kept comfortable; but the boiler has very little capacity for surplus steam, and much extra coal and care are required to keep up the requisite pressure in cold weather. A wrought iron tubular boiler can be obtained at a small cost, and the saving in coal and care would pay the expense in a few years. The attention of the Board is called to this subject.

The following text-books have been used: French's and Hagar's Arithmetics, Robinson's and Greenleaf's Algebras, Brooks' Geometry, Kerl's and Whitney's Grammars, Quackenbos' Rhetoric, Collier's English Literature, Franklin Sixth Reader, Harper's Common School Geography, Guyot's Physical Geography, Tenny's Geology, Dalton's Physiology, Norton's Physics and Chemistry, Gray's Botany, Lockyer's Astronomy, Andrews' Science of Government, Porter's Mental Science, Wickersham's School Economy and Methods of Instruction, Page's Theory and Practice of Teaching, Jewel's School Government, History of Education, Barnes' History of the United States, Swinton's General History, Smith's Free-hand Drawing, Bryant's Book Keeping.

Respectfully submitted.

G. T. FLETCHER.

STATE NORMAL SCHOOL,  
Castine, December 1, 1878. }

HON. W. J. CORTHELL.

*State Superintendent of Common Schools:*

I submit my annual report; details with regard to the school will be found in my report to the Secretary of the Board of Trustees. The total attendance during the year has been larger than was expected, considering the "hard times," and the low wages paid to teachers.

In order to secure a larger attendance of earnest able young men for a full normal course, there must be a higher standard of qualifications demanded of teachers. The fruits of wise training can be secured only by the employment of those who have acquired knowledge and skill through such training.

Better preparation of pupils to enter our Normal Schools, and inducements to retain them there for a full course of study, are results much to be desired, but which can be obtained only through an improvement of our common school system. The Normal course of study is admirably adapted to the end for which it was designed—the preparation of teachers for their work in and out of the school room. Though the merits of a school are to be determined by the success of its graduates, the amount of teaching secured by the State as the result of normal training in this institution is not indicated by the service of graduates alone. About one thousand pupils have taught in the schools of the State after taking a partial course. The best results cannot be expected from this class of teachers, but much valuable work has been performed by them. As it is possible that a course of one year might prove of advantage to pupils

and State, your attention is called to the report made to the Secretary of the Board.

The pressing need of the time, especially in our State, is a strong public sentiment which shall appreciate and demand better school instruction. The best governments of the world are being driven, by the force of events, to the conclusion that neither in material resources nor in powerful armies is there safety and security for life and property. The only hope of the nations is through right education, that which will render the people intelligent and virtuous.

No material changes have been made in the course of study, though the number of branches taken during the two years might be profitably reduced.

It is the aim of the teachers to combine professional with academic work throughout the course. Each recitation is conducted with special reference to the best methods of teaching the subject considered. General exercises in school economy are given several times per week, and the pupils are required to teach normal classes and to spend considerable time in observation or practice teaching in the Model School. This school has been re-graded and much improved during the past year. The studies pursued and the method of teaching afford an example in classification and work which is of value to the Normal student. The advantages of the school could be better utilized were the pupils in the Normal School building.

Two teachers were employed at the beginning of the fall term, to fill the vacancies made by the resignation of Miss Lufkin and Mr. Philbrook, Mr. Potter, a graduate of Brown University, recently a teacher in Vermont Academy, and Mr. Frost, a graduate of this school, a teacher of successful experience, have very acceptably filled the positions.

Miss Lufkin was connected with the school seven years, and by her ability, earnestness and faithfulness won the high regard of her associate teachers and the pupils. Mr. Philbrook was connected with the school two years, manifesting good abilities in his class work.

Now that Normal Schools have become established facts, and are coming to be recognized as a necessary part of our common school system, it is of vital importance that they be generously supported by the Legislature and patronized by the people. The good results of professional training for teachers will be so manifest during the next decade of years, if the schools are well supported and the pupils generally employed to teach our schools, that any present doubts of their efficiency and opposition to their work will entirely disappear. The schools and the people must become more intimately acquainted.

Respectfully.

G. T. FLETCHER.

OAK GROVE SEMINARY,  
Vassalboro', Dec. 23, 1878. }

Hon. W. J. CORTHELL,

*State Superintendent of Common Schools:*

DEAR SIR:—I herewith submit the annual report of the Normal Department of Oak Grove Seminary for the school year beginning November 13, 1877, and ending November 1st, 1878. This department has been in successful operation thirty-three weeks.

The following is the list of students in attendance, with age, date of entering, and weeks present:

NAMES.	Age.	Date of entering.	Date of leaving.	Weeks present.
J. Frank Hammond † .....	21	Aug. 20, 1878,	—	11

E. H. COOK, *Principal.*

MAINE CENTRAL INSTITUTE, }  
Pittsfield, Nov. 1, 1878. }

HON. W. J. CORTHELL,

*State Superintendent of Common Schools:*

Herewith I submit the annual report of the Normal Department of Maine Central Institute.

The school year consists of four terms of ten weeks each. The winter term began November 5, 1877, and the fall term closed October 25, 1878.

The number of pupils in attendance during the winter term was 10; during the spring term, 27; during the summer term, 14; and during the fall term, 31; making a total of 82 for the four terms, consisting of 53 different pupils. In addition to the regular classes, a teachers' class of more than fifty, outside of the Normal classes, was sustained, by the Normal teachers, in the fall term.

When any pupil under sixteen years of age is received, it is with the understanding that two years shall be spent on the first year's course.

The following is a list of text-books used during the year: Webster's and Worcester's Dictionaries, Franklin Sixth Reader, Martin's Civil Gov-

ernment, Lockyer's Astronomy, Thalheimer's General History, Barnes' and Higginson's U. S. Histories, Dana's Geological Story, Hopkins' Outline Study of Man, Underwood's American Authors, Shaw's English Literature, Greenleaf's Practical Arithmetic and Elementary Algebra, Loomis' Geometry, Whitney's Essentials of English Grammar, Norton's Physics, Youman's Chemistry, Wood's Botany, Hart's Rhetoric, Hutchinson's Physiology, Smith's Free-hand Drawing, Meservey's Book-keeping, Wickersham, Hart, Johonnot and others in Didactics: Many other books for reference are kept on the tables of the teachers.

Respectfully submitted.

CYRUS JORDAN,  
*Principal of the Normal Department.*

## CONCLUSION.

As a summary of the conclusions reached in the foregoing pages, I would make the following

## SUGGESTIONS :

1. *General.* First, That school officers, teachers, parents, and all interested, labor earnestly to increase the quantity of common school work, by increasing the general and average attendance.

Second, That like efforts be used by parents and school officers, to better its quality by demanding better teaching, using every means to secure for the schools only those teachers who are thoroughly qualified in knowledge, in professional skill, and in moral character.

Third, That to these ends renewed efforts shall be put forth to enlarge the sphere and quality of Free High School work; and to push into the Normal Schools, from every section of the State, young men and women who manifest peculiar aptness for the work of teaching.

Fourth, That to the same ends the work of the Normal Schools be so modified as to admit of graduation after a course of one year, in order to multiply the number of trained teachers in the common schools.

Fifth, That the friends of common schools, in the interests of economy in expenditure and reform in the system, shall

persistently agitate the abolition, or reorganization of the district system in every town, with a view to better and longer schools at less cost.

2. *Special and Legislative.* First, That the public school system of the State as at present organized, shall, for this year at least, be severely let alone so far as concerns the abolition or material modification of any of its departments or features, and especially as regards the system of taxation for its support.

Second, That if any change must be made in the laws regarding taxation for common school purposes, such change shall be a reduction in the amounts towns are required to raise by local taxation.

## COMPARATIVE STATEMENT—I.

ITEMS.	1878.	1877.	Increase.
Whole number of scholars between four and twenty-one .....	214,797	217,417	dec. 2,620
Number registered in summer schools .....	127,087	125,455	1,632
Average attendance .....	102,805	100,982	1,823
Number registered in winter schools .....	132,692	132,865	dec. 173
Average attendance .....	108,940	107,653	1,287
Percentage of average attendance to whole number of scholars .....	.52	.51	.01
Percentage of average attendance to number registered in summer schools .....	.81	.80	.01
Percentage of average attendance to number registered in winter schools .....	.82	.81	.01
Percentage of average attendance to number registered during year .....	.82	.80	.02
Whole number of different scholars registered in schools during year .....	155,150	155,428	dec. 378
Average length of summer schools in weeks and days, $5\frac{1}{2}$ days per week .....	10w. 2d.	10w. 2d.	—
Average length of winter schools .....	11w.	11w.	—
Average length of schools for year .....	21w. 2d.	21w. 2d.	—
Number of districts in State .....	4,005	4,039	dec. 34
Number of parts of districts .....	344	354	dec. 10
Number of school-houses .....	4,215	4,222	dec. 7
Number reported in good condition .....	2,943	3,014	dec. 71
Number built during year .....	82	86	dec. 4
Cost of same .....	\$92,746	\$62,766	\$29,980
Estimated value of all school property .....	3,063,418	3,022,722	40,696
Number of male teachers employed in summer .....	274	228	46
Number employed in winter .....	2,280	2,233	27
Number of female teachers employed in summer .....	4,540	4,543	dec. 3
Number employed in winter .....	2,389	2,361	28
Number of teachers graduates of normal schools .....	334	314	20
Average wages of male teachers per month, excluding board .....	\$32 63	\$32 76	dec. 0.13
Average wages of female teachers per week, excluding board .....	3 98	4 14	dec. 0.16
Average cost per week of teachers' board .....	2 20	2 27	dec. 0.07
Amount of money voted by towns for common schools .....	595,173	648,584	dec. \$53,411
Excess above amount required by law .....	105,194	152,195	dec. 47,001
Average amount per scholar .....	2 58	2 53	0.05
Amount available from town treasuries for year ending April 1 .....	660,086	671,157	dec. 11,071
Amount available from State treasury .....	337,202	347,475	dec. 10,273
Amount derived from local funds .....	19,872	24,358	dec. 4,486
Amount expended for common schools .....	936,648	951,877	dec. 15,229
Balance unexpended .....	90,205	94,198	dec. 3,993
Amount expended for repairs, insurance, fuel, &c .....	96,994	125,211	dec. 28,217
Amount contributed to prolong schools in money, fuel, &c .....	8,964	7,402	1,562
Amount paid for school supervision .....	30,339	30,814	dec. 475

## COMPARATIVE STATEMENT—II.

ITEMS.	1878.	1868.	Increase.
Number of scholars between four and twenty-one .....	214,797	225,200	dec. 10,403
Number registered in summer schools .....	127,087	111,542	15,535
Average attendance .....	102,805	85,407	17,398
Number registered in winter schools .....	132,692	124,655	8,037
Average attendance .....	108,940	97,790	11,150
Percentage of average attendance to whole number of scholars .....	.52	.42	.10
Average length of summer schools .....	10w. 2d.	9w. 2d.	1w.
Average length of winter schools .....	11w.	9w. 1d.	1w. 4d.
Average length of schools for year .....	21w. 2d.	18w. 3d.	2w. 4d.
Number of school districts in State .....	4,065	3,632	373
Number of parts of districts .....	344	282	62
Number of school-houses in State .....	4,215	3,719	494
Number reported in good condition .....	2,943	1,973	966
Number built last year .....	82	93	dec. 11
Cost of same .....	\$92,746	\$272,774	dec. 180,023
Estimated value of all school property .....	3,063,418	2,163,409	900,000
Number of male teachers employed in summer .....	274	70	204
Number employed in winter .....	2,280	1,815	465
Number of female teachers employed in summer .....	4,540	4,360	180
Number employed in winter .....	2,389	2,012	377
Wages of male teachers per month, excluding board .....	\$32 63	\$29 50	\$3 13
Wages of female teachers per week, excluding board .....	3 98	2 94	1 04
Amount of school money raised by taxation .....	819,753	598,094	221,659
Excess above amount required by law .....	105,194	—	—
Average amount raised per scholar .....	3 86	2 65	1 21
Income of permanent school fund apportioned to common schools .....	25,954	17,719	8,235
Bank tax apportioned to same .....	116,059	—	—
Amount derived from local funds for support of same .....	19,872	12,013	7,859
Amount contributed to prolong same .....	8,964	14,640	dec. 5,676
Amount paid for repairs, fuel, &c .....	69,994	73,478	dec. 3,484
Amount paid for school supervision .....	30,339	18,351	11,988

# STATEMENT

*Showing amount of School Money apportioned by State Treasurer to the several Towns and Plantations in the State, and available for school purposes for the school year ending April 1, 1879.*
