STATE OF MAINE.

EDUCATIONAL DEPARTMENT, }
Augusta, Dec. 15, 1879. }

To Governor ALONZO GARCELON,
and the Honorable Executive Council:

GENTLEMEN:—Agreeably to the provisions of the statute of the State, I herewith respectfully submit the following report upon the Common Schools of Maine, for the current year.

Respectfully,

Your obedient servant,

EDWARD S. MORRIS,

Sup't of Common Schools.

REPORT.

The present incumbent of the office of State Superintendent received his appointment and entered upon the duties of his office several days past the middle of April, 1879; therefore to the date of this report he has been in office a little less than eight months. In this short time, a large proportion of which has been necessarily devoted to the clerical work of the office, it cannot be supposed that so intimate a knowledge of the workings of our common school system could be gained, or that the wants, and *how to remedy them* should be learned so well, as would have been under different circumstances. The annual returns of the municipal officers and superintending school committees or supervisors of the different cities, towns and plantations required to be made on or before the first day of May of each year, had just begun to be returned. Many of these returns were imperfect in form, and not in accordance with facts as was apparent from inspection. These were returned for correction, and in many instances long letters of explanation and instruction were written and enclosed for the benefit of the parties who were in error. This work of verifying the returns was not committed to another but was attended to personally by the Superintendent.

It is the duty of the State to establish at public cost asylums for the insane, to provide in some measure for the instruction of the blind and deaf, and for the safe keeping and punishment of those who have broken the laws, and are dangerous to the peace and welfare of the community. It is her further duty to provide for the comfortable care and maintenance of the poor within its borders, whether made so by misfortune or vicious habits. How much more is it the duty of the State to provide for the education of its children. In a government like ours, where all political power resides in the people, where the "government is *of* the people, *for* the people, and *by* the people," nothing can be of greater importance than the intellectual and moral education of the children. "Virtue and intelligence are essential to the per-

petuity of the republic." This has so often been asserted, and the importance of our public school system has been so often advocated, the further discussion would have been abandoned long ago were it not for the firm belief that the public has in the truth of the above quotation. Our public school system has its imperfections and it is one of the duties incumbent upon the Superintendent, "to make a report to the Governor and Council of the result of his inquiries and investigations, and the facts obtained from the school returns with suggestions and recommendations as in his judgment will best promote the "improvement of common schools." "The facts obtained from the school returns," may be found properly arranged by towns and counties and printed in an appendix to this report. A comparative statement of the year 1879, and 1878 is exhibited below :

COMPARATIVE STATEMENT.

ITEMS.	1879.	1878.	Increase.
1 Whole number of scholars between four and twenty-one.....	215,724	214,797	927
2 Number registered in summer schools.....	125,640	127,087	dec. 1,447
3 Average attendance.....	101,443	102,805	dec. 1,362
4 Number registered in winter schools.....	129,880	132,692	dec. 2,812
5 Average attendance.....	105,302	108,940	dec. 3,538

39	Amount contributed to prolong schools in money, fuel, &c.....	8,565	8,964	dec. 399
40	Amount paid for school supervision.....	28,407	30,339	dec. 1,932

As a result of the persistent work of the Superintendent, fiscal returns have been received from every city in the State, from every town except the town of Mayfield, and from every plantation except Connor and Sheridan in Aroostook county. Mayfield has made no return for several years, has paid no State tax or received any money from the State for school purposes. Connor and Sheridan plantations made returns for the year 1877, only. Neither made returns last year, and both have lost their organization for school purposes.

Unless the returns required are made and the answers to the questions, asked in the blanks furnished, are accurately given, any comparison made between the returns of different years can be of little use. No action based upon the returns can be judi-

cious unless they are full and accurate. For that reason extra effort has been made to obtain as complete and accurate returns as possible.

NUMBER OF SCHOLARS RETURNED.

1879. Number of scholars.....	215,724
1878. " "	214,797
	<hr/>
Increase in one year as per returns.....	927

This is not quite correct. Deduct from the number of scholars returned this year the number returned from the towns that made no report last year, and the true gain will be 513. This increase though small is encouraging, for for many years prior to this the school population has been gradually diminishing.

1869. Number of scholars.....	226,143
1879. " "	215,724
	<hr/>
Decrease in ten years.....	10,419

REGISTERED PUPILS.

1879. Average whole number registered.....	127,760
1878. " " " "	129,889
	<hr/>
Decrease in one year.....	2,129
1879. Average whole number registered.....	127,760
1869. " " " "	127,776
	<hr/>
Decrease in ten years.....	16

While the whole number of pupils returned in 1879 is 10,419 less than in 1869, the decrease in the average whole number registered is only 16 for the ten years. On the other hand while the whole number returned for the year 1879 is 513 more than in 1878, the decrease in the average whole number registered has diminished 2,129.

1879. Average attendance.....	103,373
1878. " "	105,873
	<hr/>
Decrease in one year.....	2,500

1879. Average attendance.....	103,373
1869. " "	101,274
	<hr/>
Increase in ten years.....	2,099

It will be seen that the decrease of average attendance from 1878 to 1879 is quite large, 2,500, very nearly the same decrease as the decrease in the average whole number registered.

It is not an encouraging sign that while the whole number of scholars returned is slightly on the increase, the attendance is on the decrease. The reports of the few years prior to 1879 have shown an increase in attendance. It is to be hoped that this increase in attendance will continue and that the decrease noticed this year is only accidental. One of the causes that has contributed to the increase in attendance for five years past has been, no doubt, the establishment and continuation of free high schools in very many of the towns throughout the State. By the report of 1878, it appears that about 160 of these schools were in operation for the year ending December 1, 1878, while for the year ending December 1, 1879, only 66 were maintained. At these schools a class of scholars was in attendance that would not have been enrolled in any school if the free high schools had not been in operation.

According to the returns furnished, the schools throughout the State have continued a very little longer than in 1878.

1879. Average length of summer schools.....	10w. 3d.
1878. " " " "	10w. 2d.

Increase from 1878.....	1d.
-------------------------	-----

1879. Average length of winter schools.....	11w. 3d.
1878. " " " "	11w.

Increase from 1878.....	3d.
-------------------------	-----

Increase in average length of schools for the year ending April 1, 1879, 4 days.

How is this extra length of schools paid for?

The item No. 35 "Total School Resources" shows an increase of school money for the year of \$58,152 over 1878. This is not correct. Assuming that the amount raised by the towns, cities and plantations whose fiscal returns were not included in the report of 1878 to have been the same as returned this year, the

total school resources of the year 1878 would have been \$1,147,631 instead of \$1,017,160 as reported, showing a decrease this year of \$74,840. This must be very nearly correct, for the school fund apportioned by the State for 1879 is \$21,165.01 less than last year and almost every town raised less money for school purposes than in 1878.

Items 26, 27 and 28 will show how the schools could be increased in length with less money. Male teachers received on the average \$3.06 per month less for their services, and female 15 cents per week less, and the amount paid for board was diminished 13 cents per week.

FREE HIGH SCHOOLS.

The eighth article of the constitution of the State of Maine reads as follows :

“A general diffusion of the advantages of education being essential to the preservation of the rights and liberties of the people ; to promote this important object, the Legislature are authorized, and it shall be their duty to require the several towns to make suitable provision at their own expense, for the support and maintenance of public schools ; and it shall further be their duty to encourage and suitably endow, from time to time, as the circumstances of the people may authorize, all academies, colleges and seminaries of learning within the State,” provided, &c.

Under this provision of the constitution, laws relating to the education of youth, have been enacted, and our public school system has grown up. It is made the duty of the State to educate her children. It is no longer an open question whether the State has a *right* to educate the poor man's child upon the rich man's money, or to take one man's money, collected as taxes, and apply the same to the education of another man's child as well as his own. Occasionally the contrary doctrine is maintained ; but to use the words of Prof. Newell : “The public school has so interwoven itself into the framework of our laws, and into the social life of our people, that the abstract question of its right to exist cannot now be made an issue.” To what extent shall this education be carried? Our statutes, passed under the above provision of the constitution, makes the school life of our children from four to twenty-one years. Full seventeen years of childhood and youth may be spent at our common schools according to the law.

This the length. The breadth and height are to be inferred from the studies in that section of the statute treating of the examination of teachers. The teacher *must* be examined in reading, spelling, English grammar, geography, history, arithmetic, book-keeping and physiology, and he *may* be examined in the entire curriculum of the college or university, if the superintending school committee desire to introduce the branches constituting such a course into our public schools. Cities and the larger towns and villages in the State have sustained Free High Schools at the public cost; and however penurious men may be, there is not a case in our State's history where the payment of taxes has been resisted, for the reason that a part of the money has been apportioned for the support of high schools.

Blanks were sent from the State Superintendent's office to the cities and towns, supporting a high school as a part of the common school system, asking for answers to the following questions:

1. How many pupils graduated from your high school at the last graduation?
2. How many of that number whose parents pay *no property tax*?
3. How many whose parents pay tax upon less than \$1,000?
4. How many upon more than \$1,000 and less than \$5,000?
5. How many upon more than \$5,000?
6. How many were orphans or children of widows?
7. How many the children of working-men?
8. How many the children of professional men?
9. How many the children of clerks, agents or salaried men, (not professional)?

From the answers received, it appears that 21 per cent. of the parents of the graduates paid no property tax, 28 per cent. paid tax on less than \$1,000 property, 40 per cent. between \$1,000 and \$5,000, and only 11 per cent. on over \$5,000.

From the same returns it appears that 20 per cent. were orphans or children of widows, 61 per cent. children of working men, 8 per cent. children of professional men, and 11 per cent. children of clerks, agents or salaried men, (not professional.)

From these returns, it is conclusively shown that the city and village high schools are not patronized by the wealthy entirely, but largely by those in moderate circumstances.

The State has in times past given material aid to various academies and seminaries, but in 1873 the "Free High School" Act was passed, while further aid was withdrawn from academies and

seminaries. They were not free but tuition schools. They were not numerous nor well patronized, for to enjoy the privileges of these schools not only tuition must be paid, but from necessity the added charges of board, by all except by a few, who lived in the immediate vicinity of these schools. The Legislature of 1879 suspended the operation of the act of 1873. The question therefore will come before the Legislature of 1880 whether the act of 1873 shall be repealed, further suspended, or permitted to remain in full force. One of my predecessors in his report for 1875 used the following language :

“Our Free High School System has now been three years on trial, and has conclusively demonstrated the wisdom of the State in establishing it. The influence of this grade of schools cannot be easily estimated. They have exerted that influence in a three-fold direction. Besides opening to large numbers of our youth, sources of culture not otherwise attainable, they have had, in the localities where they have been established, a marked influence upon the common schools in giving them better teachers, and inspiring their pupils with new incentives to work in the desire to qualify themselves for admission to the High Schools. In my opinion no portion of our school expenditures has been more profitable than that for the Free High Schools.”

The testimony of the Principals of the normal schools is, that many of their pupils would not have attended the normal schools, had it not been for the privileges enjoyed at the free high schools. The advantages of these schools enabled them to fit themselves for the normal schools, and the prospect of being fitted to teach in the free high schools was a very powerful incentive to do good work and complete the full course. It is hoped that the Legislature in its wisdom will continue the system.

The President of the French Commission to examine into the school system of the United States, speaking of the high schools in this country, made a full report of the Educational Exhibit at Philadelphia, and the result of his personal visits to many of the schools of the United States. A portion of the report has been translated by President Pickard of the Iowa University. I quote liberally from this translation :

“We have often spoken in this report of high schools and of their work. It is proper that we speak of their peculiar features. No part of the American school system is more essentially national—none presents a character more original—none is further removed in some respects from European ideas—none more worthy of profound study.

“Let one read the programmes of these high schools, and note the attendance of the children of the poor passing four full years in adorning, strengthening and cultivating their minds by studies elsewhere reserved exclusively for the children of people of means—and then let him say whether this is not the seal of American civilization. Can one wonder at the frank pride with which the citizens of the United States speak of their high schools? Have they not the right to be proud when they show us irrefutable evidence of the fact that the son and daughter of the poorest laborer are so educated that one cannot detect the difference between them and the children of those most favored of fortune? Between them there can be found no difference of culture, no trace of intellectual inferiority. If it is pleasant to see society give liberally the benefits of primary education to the poor, what more extraordinary spectacle can be witnessed than that of a country which feels itself conscious of wrong if it furnishes not the means for a free and a full diffusion of intelligence?

“Here is a country where many hundreds of high schools exist as public and as free and upon the same footing as the lower schools. They are part of the same system, administered by the same officers, supported from the same funds—designed for the same population. Still, instead of limiting themselves to that which is strictly necessary, the minimum of attainments which will keep their pupils out of the category of illiterates—these high schools are based upon what one might call high national instruction.

“They are not professional schools, nor are they bastard imitations of classical colleges, nor universities of a low grade; they are truly popular schools so ordered as to give to the people whatever is best, purest, and most refining in liberal education. They open to no special pursuit—they lead to all without exception and without distinction.

“They make neither an engineer, an architect, nor a physician—nor do they make an artisan or merchant, but they do produce bright and intelligent youths disciplined to all studies—ready to choose between diverse professions, and capable of success in whatever they choose. This one will go to the university—that one into business; there will be a difference of occupation, but no inequality in preparation.

“So far as social equality can be reached in this world, it is attainable through the American high school. In other countries it is to be feared that the children of different classes of society, although they may for a time be brought together in the public school, will very soon be found separated as widely as are their families in the social scale. It cannot be otherwise, for one will enter upon apprenticeship and arrest his intellectual development at the point where the other but fairly commences his growth. But in America everything is done to retard, and to reduce the degree of this separation by carrying as far and as high as possible

that common instruction which effaces all distinctions between the rich and the poor.”

These remarks were written in reference to the high schools of the larger places visited by the French Commission. The object of the free high school is to carry as far as possible “that common instruction which effaces all distinctions between the rich and the poor.” The law of 1873 may be imperfect, and if so should be amended, but it is hoped that no retrograde steps will be taken in matters pertaining to the education of our children.

The free high school year of 1878 ended Dec. 1st, therefore schools were in operation from Dec. 1, 1878, to Feb. 27, 1879, before the operation of the law was suspended. For information regarding these schools, see the following abstract of returns :

FREE HIGH SCHOOL STATISTICS.

DISTRICT SCHOOLS.

How can our country district schools be improved ?

First. We must have fewer and larger schools.

From returns received at the Superintendent's office from 292 towns in the State, it appears that 702 school districts in these towns had terms of summer school with an average attendance ranging from two to twelve pupils. If the towns that have not reported should make returns in the same proportion, the number of districts would be increased to about twelve hundred. In addition to the 702 districts reported, 81 districts had no summer school. Many of these districts have so very few scholars, it is not thought best to have any summer or winter school, but use all the money apportioned to the district for one short term in the fall. The inevitable result is a very short and poor school for the year.

By chapter 11, section 3 of the revised statutes, as amended by chapter 14 of the public laws of 1875, towns can abolish school districts and adopt the township system. A few of the towns in the State have done this, and the testimony of the officers of these towns is, that the schools have been very much benefited. The schools have been re-arranged and made larger, longer and better by the change. Several years ago a law was passed in Massachusetts, similar to the law in this State, permitting the adoption of the township system. About forty towns have not yet adopted the township system, but it is thought that the Legislature of 1880 will pass a law compelling every town in the State to abolish the district and adopt the township system.

Hon. John Eaton, the U. S. Commissioner of Education, in his report of 1877, of the district system, as it exists in many States, says :

“The present district system involves almost necessarily numerous poor school houses, because the few people in a district cannot generally afford a good one. The population being scanty, schools are small, with imperfect classification of the pupils and recitations too numerous and too short for fair results. Poor teaching is inevitable, from the need of getting for each little school the cheapest teacher to be had ; and yet a great proportionate expense is incurred on the whole, since in the case of every two school-houses, where one would satisfy all real wants, there must be two teachers, two fires, two sets of furniture, besides the cost of the unnecessary building.”

The people of the State do not favor the abolition of the district system, and until public sentiment is changed, we can hardly expect this change in our school system to be made. It is argued by some that if the district system was abolished, it would be impossible to re-arrange the schools in many places, so as to make them larger than at present. To a certain extent this is true, on account of the sparseness of population and the distance the children would be obliged to travel to and from school. Can any other plan be devised to bring about the required results?

The entire school money raised by the country towns in which the small schools are found, together with the money received from the State for school purposes, will give to each pupil as per average attendance in these towns about seven dollars and sixty-eight cents. For districts that have an average attendance of from two to twelve pupils, the amounts received are very small. It would be advisable to authorize these small districts to expend their money in neighboring districts—with the right of reserving a part of the money of the district to transport to and from school those children who are too far away to walk—this money to be expended at the discretion of the municipal officers and school board. The State of Massachusetts by law has authorized towns to raise money to be expended for the conveyance of the distant children to and from school. Under the provisions of this act, the school committee of the town of Quincy provide for the conveyance of the distant children to and from school. If the densely populated State of Massachusetts finds it good policy to provide for the conveyance of its distant children, how much stronger reasons exist that such provision should be made for the scattered children in many parts of Maine.

Second. Better teachers are needed.

If we have fewer and larger schools, the consequence is fewer teachers will be required, larger schools will be maintained and a greater inducement held out for the better teachers to continue in the work. The need of better trained teachers has been suggested in the reports of former superintendents.

Prof. George B. Emerson, in speaking of education, has said :

“The prevailing opinions in regard to this art are such as the common sense of mankind and the experience of centuries have shown to be absurd as to every other art and pursuit of civilized life. To be qualified to discourse upon our moral and religious duties, a man must be educated by years of study; to be able to administer to the body in disease, he must be educated by a care-

ful examination of the body in health and in disease, and of the effects produced on it by external agents; to be able to make out a conveyance of property, or to draw a writ, he must be educated; to navigate a ship, he must be educated by years of service before the mast or on the quarter deck; to transfer the products of the earth or of arts from the producer to the consumer, he must be educated; to make a hat, or a coat, he must be educated by years of apprenticeship; to make a plough, he must be educated; to make a nail, or a shoe for a horse or an ox, he must be educated; but to prepare a man to do all these things, to train the body in its most tender years, according to the laws of health, so that it should be strong to resist disease, to fill the mind with useful knowledge, to educate it to comprehend all the relations of society, to bring out all its powers into full and harmonious action, to educate the moral nature, in which the very sentiment of duty resides, that it may be fitted for an honorable and worthy fulfilment of the public and private offices of life—to do all this is supposed to require no study, no apprenticeship, no preparation!"

The untrained teacher cannot do good work, for until he becomes trained, either in schools established for that purpose, or by a series of experiments in teaching, his work will be unsystematic and not progressive. His classification will be imperfect, he will have no definite object in view towards which to direct his own efforts and the efforts of his pupils. Every State Superintendent in our own State, as well as every prominent educator in other states, has urged the necessity of better qualified and better trained teachers. "As the teacher is so is the school." We are too apt to laud and magnify the excellencies of our school system, and pass over grave deficiencies that exist. Recognizing the importance of having teachers thoroughly trained for our district schools, the State has established and is now maintaining various schools for training teachers.

NORMAL SCHOOLS.

The State of Maine by different acts of the legislature has established and is now sustaining three Normal Schools, one at Farmington, one at Castine and one at Gorham. The schools at Farmington and Castine have been in operation for several years and have graduated many excellent teachers. The one at Gorham was established in January 1879. The State also aids the Maine Central Institute at Pittsfield, and the Oak Grove Seminary at Vassalboro. These institutions graduate a class annually from a Normal department.

“The object of Normal Schools is to render the pupils efficient workmen in the education of children and youth. The instruction is designed to give the pupil a definite understanding of the object, principles and methods of education, and a thorough knowledge of the subjects which he will be called to teach.”

The act establishing these schools prescribes that “they shall be thoroughly devoted to the work of training teachers for their professional labors; that the course of study shall include the common English branches in thorough reviews, and such higher branches as are especially adapted to prepare teachers to conduct the mental, moral and physical education of their pupils; that the art of school management, including the best methods of government and instruction, shall have a prominent place in the daily exercises of the school; that, while teaching the fundamental truths of Christianity, and the great principles of morality recognized by statute, they shall be free from all denominational teachings, and open to persons of different religious connections, on terms of perfect equality.”

The theory, announced by the statutes establishing these schools, is a good one. An annual appropriation is made for the support of these schools, the tax is paid willingly, but when the teachers have enjoyed the privileges of the schools, and have been trained at the State's expense, the State does not receive the benefit of this training. Out of the whole number of graduates from these schools, educated and trained at the public expense, three hundred and eighty-five are reported as having taught the past year. Many of these have been reported twice, and some perhaps three times. It is fair to presume that not more than two hundred and seventy-five different graduates have been employed for the year.

Our district agent system of employing teachers is not favorable to the employment of the best teachers to be found. Agents are selected frequently from not very commendable motives. Fitness for the position or interest in the welfare of the young is not thought of. In the routine of district election, it may be “the turn” of a candidate to receive the election, and when elected, he fulfils his duty by selecting some relative or friend, with no thought of fitness for the responsible office of teacher. It is true that many of our normal graduates have found permanent situations in this State in the larger villages and cities. Some, after fulfilling their obligations to the State, have gone into other States, and

have found employment there; others have gone into other business, while many of the lady graduates have formed life engagements, and have left the ranks of *public* teachers. The State *defrauds* itself by committing to the thousands of district agents the right to select the teachers, and until the selection and employment of teachers is placed in different hands, and the examination and certificating of teachers is placed upon a different basis, the trained normal graduates can have but little encouragement to continue in the ranks. Cultivated, trained and experienced teachers are too often passed by, and young, immature and inexperienced ones are put into the school-room. The demand not being up to the present supply, the attendance upon these training schools will not increase, but gradually grow smaller. All of these schools have been fairly patronized for the year, but neither of them have been taxed to one-half their capacity. If each of the schools had twice the number of pupils they have had the last year, the teaching force employed and conveniences of the buildings would not have been overtaxed. In addition to these three Normal Schools, the State has supported a training school for teachers in the Madawaska territory. Oak Grove Seminary at Vassalboro, and the Maine Central Institute at Pittsfield, have each of them a Normal Department, and the State pays to these institutions \$600 each. The reports of the principals of these schools and of the secretary of the board of Normal trustees will give particular information as to the work for the year.

FARMINGTON, December 25, 1879.

To Hon. E. S. Morris, State Superintendent of Common Schools:

The annual report required by the By-Laws of the Board of Trustees of the Normal Schools, is, by the Secretary of the Board, hereby respectfully submitted. So far as is known, all the Normal Schools of the State have had uninterrupted sessions in all their departments during the year. The vacancy in the Model School at Farmington, occasioned by the resignation of Miss Hambly, has been temporarily filled by the appointment of Miss E. Burt Holt of New Sharon, Me., a graduate of the Farmington School, at the last term. And the character of her work would seem to demand that the appointment be made permanent. On

the roof of the building in Farmington repairs are urgently demanded to protect the building from serious damage by leakage.

The old desks, taken from the school-room, are still on hand, the resident trustee not having been able to dispose of them at a satisfactory price.

The brick-work of the heating apparatus is parting, and it may be found necessary to re-build it next summer.

The vacancy occasioned by the resignation of Mr. Fletcher, principal of the school at Castine, was filled, as you are aware, by the election of Mr. Woodbury, first assistant in the Farmington School, who has entered upon his new field of labor with his usual energy and devotion, giving promise of success. The necessary repairs on the steam pipes of the heating apparatus have been made, at an expense of \$167.27.

The school at Gorham has been in operation less than one year; and I am not aware that any statistics of that school have yet been published; and as no report from the principal has reached your secretary, he is unable to embrace in this report any material facts relative to that school.

On the occasion of the regular meeting of the Board of Trustees at Gorham, last June, on inspection, the building was found in good condition; its appointments, with a single exception, suitable and convenient. The extensive grounds afford ample scope for a judicious outlay of money.

The library and extensive mineral cabinet, embraced in the generous gift to the State by the people of Gorham, might be arranged in one of the rooms of the Normal School building, with great advantages to the school. While the Gorham school is established on a course of but one year, at the same time it will be seen by the reports made by the principals of the other two schools, that the principal of the Farmington school recommends "an advanced course of one year, (optional with the pupil,)" making three years in all; while the principal of the Castine school advocates "a special shorter course of one year," for the purpose of securing "uniformity with Gorham, in Normal School work."

In view of these facts, and others which may be gained from a knowledge of the workings of the Gorham plan, as to the ability of pupils to merit the diploma of the State in a one year's course, the Board may possibly be led to inquire into the propriety and

desirability of an entire uniformity in the three schools of the State, both in the number of terms each year, and the length of the course, as well as in the curriculum laid out. The latter seems to have been, several times, under advisement of the Board, but so far as the records show, no conclusion has ever been reached.

The reduction of expenses in the department of instruction, amounting to some \$4,500 per annum, being cheerfully acquiesced in by the teachers, is not likely to interfere in any way with the usefulness of the school.

For other valuable information, as to "amount and condition of apparatus and furniture, number in attendance, condition of the library, text-books, etc.," so far as relates to the two schools from whose principals reports have been received, you are referred to those reports herewith respectfully submitted.

DAVID H. CHANDLER, *Secretary*.

STATE NORMAL SCHOOL, }
Farmington, Me., Nov. 19, 1879. }

To Mr. D. H. Chandler, Secretary of Board of Trustees of Normal Schools:—

I submit the annual report of this school for the school year 1878-9.

The numbers in attendance were as follows :

Fall term : A class, 19 ; B class, 18 ; C class, 28 ; D class, 31.

Spring term : A class, 24 ; B class, 21 ; C class, 37 ; D class, 24. Total, 202.

The course of study consists of two years of two terms each. A class is admitted at the beginning of each term, and at the close of each term a class is graduated.

The text books used, not naming books used mainly for reference, were the following : Arithmetic, Dana P. Colburn ; Geometry, Evans ; Geography, Maury, Harper ; Algebra, Todhunter ; Book-keeping, Bryant & Stratton's Elementary ; Natural Philosophy, Steele ; Botany, Gray's How Plants Grow ; Chemistry, Hooper, Steele ; U. S. History, Eliot ; Physiology, Hutchison ; Civil Government, Andrews ; School Economy, Wickersham ; Didactics, Currie's Infant School Education, Currie's Common School Education, Spencer's Essays on Education, Rosenkroutz's Pedagogics.

The apparatus and furniture is in good order, as is also the school building. The fence around the grounds should be completed.

The course of study in the school has been settled by years of trial, and it does not seem politic to shorten it; yet the work is severe, and the interests of the school would be advanced by the organization of an advanced course of one year, to be taken at the option of graduates from the first course of two years. Some work from our present course could then be put over into the advanced course much to the advantage of the present course, and some higher studies could be added in the advanced course, studies needed, but for which there is now no room. I trust the board will consider this matter.

Respectfully submitted,

C. C. ROUNDS.

STATE NORMAL SCHOOL, }
Farmington, Me., Nov. 19, 1879. }

To Hon. E. S. Morris, State Superintendent of Common Schools:—

I submit the annual report of this school for the school year 1878-9.

Our school year is divided into two terms, of eighteen and of twenty weeks respectively.

For a list of text books used during the year, I would refer to my report to the Secretary of the Board of Trustees. I would refer to the same report for some reasons for the establishment of an advanced course of study of one year. Such an extension of the course is desired by our graduates, and is demanded by the interests of the school.

The interests of the Normal Schools and of the public school system of the State are one, and both alike demand some changes in the system. There should be a uniform system of State examinations of teachers. In no other way can the State effectually protect the children in its schools from incompetent teachers and be sure that the money which it distributes is profitably expended. The employment of teachers should be in the hands of the school committee. This question has been argued over and over, if that can be called argument in which the reason is all on one side. The town should be in all respects the legally recognized unit in school

administration. The district system is an inexcusable blunder and should be abolished by law. In the establishment of the Normal School the State declared that the teacher *needs* special preparation for his work ; it has never taken the other and inevitable logical step of declaring that the teacher shall *have* special preparation, and as a result teachers are examined only as to scholarship, and in most cases this examination is a farce. "As is the teacher so is the school," and teacher and school can never be what they should be until we make sure that the teacher has added to good scholarship such thoughtful study of principles and methods of education, and of modes of school organization and management, as will furnish him with the necessary conditions of success. And then the selection and employment of this teacher should be in the hands of those who examine him, direct him, inspect his work, control him in regard to the performance of his duties, and discharge him if he prove incompetent, i. e., of the committee. These changes in our school system would increase the effectiveness of the Normal Schools many fold, and in the same degree advance the cause of public education and raise our State from her present disgraceful position among those states of the union which stands lowest in the essentials of a good free school system, to a place of honor among the first.

At the beginning of the year the Primary Training School, which had been suspended for several years, was reopened under the instruction of Miss Olive Hambly of Washington, D. C. At the close of the year Miss Hambly resigned, to return to Washington, and the school is successfully continued under the instruction of Miss E. Burt Holt. This school proves again, as it proved before, an indispensable aid in the work of the Normal School.

At the close of the year Mr. R. Woodbury, for many years a highly esteemed teacher in the school, was favored by a promotion to the position of Principal of the Normal School at Castine. His place has not yet been filled.

The great good effected by the working of the Free High School law has been increasingly apparent in the improved scholarship of students entering the Normal School. It is to be hoped that this law will again be put in operation. Boys and girls are not to blame for being born in the country, and should no longer be punished for it by being denied fair school privileges. As the condition of the common school is improved, the standard of admission to the Normal School can be raised, and its work be

made more exclusively professional. Its students mainly come from the common school, and what this lacks in thorough training the Normal School must supply.

With a good high school system, an efficient and uniform system of professional examination of teachers, and the adoption of the township system in place of the present district no-system in school management, we should surely see a steady growth in excellence of the schools of our State within the next five years such as our present rate of progress will not give in a century.

Respectfully submitted,

C. C. ROUNDS.

STATE NORMAL SCHOOL, }
Castine, Me., June 1, 1879. }

Secretary of Board of Trustees:

DEAR SIR: I herewith submit my report for the school year ending May 29, 1879. The number of pupils attending the fall term was eighty-six; winter term, fifty-five; spring term, eighty.

Three terms comprise the school year. From third Tuesday of August, fourteen weeks; from second Tuesday of December, ten weeks; from third Tuesday of February, fourteen weeks. The terms for the next school year will be more nearly of equal length. Fall term, thirteen weeks; winter term, twelve weeks; spring term, thirteen weeks. Students are graduated at the close of any term when they have completed their course, though the annual exercises of graduation occur at the close of the spring term.

The following text-books have been used: French's and Hagar's Arithmetics, Robinson's and Greenleaf's Algebras, Brooks' Geometry, Kerl's and Whitney's Grammars, Quackenbos' Rhetoric, Collier's English Literature, Franklin Sixth Reader, Harper's and Monteith's Common School Geographies, Guyot's Physical Geography, Tenny's Geology, Dalton's Physiology, Norton's Physics and Chemistry, Gray's Botany, Lockyer's Astronomy, Andrews' Science of Government, Porter's Mental Science, Wickersham's School Economy and Methods of Instruction, Page's Theory and Practice of Teaching, Jewel's School Government, History of Education, Barnes' History of the United States, Swinton's General History, Smith's Free-hand Drawing, Bryant's Book Keeping.

The apparatus is in good condition, some valuable additions have been made during the year. The chemical laboratory is admirably suited to the purposes of recitation and experiments. The reference library is not large, but the books have been selected with great care, furnishing such reading matter as the pupils most need.

The cabinet of minerals and other valuable specimens, illustrating the department of Natural History, is quite large. The reference in my last report to the defects in the steam heating apparatus has received attention from the Board and needed repairs have been ordered.

The school building has been kept in excellent condition. No provision was made in its construction for ventilation, but by the use of window ventilators and the exercise of *constant care*, the air of the rooms is kept in very healthful condition. The arrangement of water closets has proved very satisfactory; when properly managed no offensive odors escape into the building.

The lot improves in appearance every year; trees have been set out and are doing well, and the gravel walks have been improved. The State should fence the front border of the lot and expend a small sum in grading.

Attention is respectfully called to the recommendation in my last report, urging the Board to arrange for a special shorter course of study and practice, to be completed in one year. The one year course at Gorham renders this plan necessary for uniformity in normal school work. The short terms in our district schools and the low wages offered to teachers do not present sufficient inducements for young men and women to take a two years' course.

For further particulars with regard to the work of the school, I refer to the report made to the State Superintendent of Schools.

Respectfully,

G. T. FLETCHER.

STATE NORMAL SCHOOL, }
 Castine, June 1, 1879. }

Hon. E. S. Morris, State Superintendent of Common Schools :

I submit my report for the school year ending May 29, 1879. For details with regard to books, house, apparatus, etc., I refer to the report made to the Secretary of the Board of Trustees.

As regards the ability, work and health of the pupils, the year just closed has been a successful one. The three assistant teachers who have been connected with the school several years, have labored with that faithfulness and efficiency which has always characterized their work. The new teachers, Mr. Potter and Mr. Frost, have proved to be most valuable instructors, bringing to their work excellent scholarship and performing their duties with marked fidelity. The Model School suffered much from the resignation of its teacher, Miss Perkins, at the close of the winter term.

Miss Gardner took charge of the school at the beginning of the spring term. She labored under some disadvantage, not having had experience in that grade of instruction, but she made constant improvement and succeeded in doing much good work.

The pupils of the Normal School, especially members of the senior class, have spent considerable time during the year in observation and practice teaching.

During the last month of the school year, the Model School was moved to a room in the Normal building. Many advantages were secured by the "change of base."

It was Superintendent Johnson's plan to have a town school for a model department, but the disadvantages in this case are obvious.

The distance between the two schools is too great, and the mixed control of State and town begets trouble.

A small number of pupils, comprising several grades, can readily be obtained and a place should be arranged for them in the Normal school building.

Pupils were graduated this past year at the close of the fall and winter terms, several pupils were not able to return to complete the course this spring, hence the class graduating at the time of the annual examination in May, was smaller than usual, though of excellent material. A larger class will complete the course next spring.

The financial stress which has so generally affected school attendance unfavorably, has been especially severe in eastern Maine, where so many are engaged in navigation. The general improvement in business, and the indications of mineral resources in this section of the State will in time prove to be an element of prosperity to our Normal and town schools.

The tendency of students to leave the school before the close of a term to teach has been largely counteracted by the following wise provision recently enacted by the Board of Trustees.

“No pupils will be received into the entering class without expressing an intention to remain a full term. Any pupil leaving school before the close of a term without giving a reason satisfactory to the principal, and being excused by him, will forfeit his right to return.”

The good of the school and of the students imperatively demands that a term's work shall be completed.

The enforcement of this regulation materially diminished the attendance but largely increased the percentage present at the close of the sessions as compared with previous years.

Names of pupils who left without being excused were not entered in the catalogue, hence the number registered does not indicate the whole number present parts of terms.

During the twelve years this school has been in operation more than twelve hundred pupils have been connected with it for an average time of nearly one year, and more than ninety per cent. of them have engaged in teaching.

The wisdom of the State in establishing Normal Schools is evident to all thoughtful observers, but additional legislation is necessary that the schools may be filled and the benefits of a complete Normal School training be realized by the State.

Attention is called to the following facts as having a bearing on this subject: The State makes the following reasonable demands: “Pupils entering the Normal Schools shall be at least sixteen years of age, if females, and seventeen years of age, if males, and they must pass a satisfactory examination in the common school branches, and pledge themselves to teach in the public schools of the State for a time as long as they shall have been connected with the Normal School.” If these pupils complete the two years' course, they must be at least eighteen or nineteen years of age at graduation, and the fact is, they are upon an average more than twenty years of age. What provision does the State make

to utilize this maturity of age, excellence of scholarship and completeness of professional training ?

The State diploma has no value as a certificate to teach in a common school. District agents may employ boys and girls, hardly in their "teens," to teach, and town committees will generally grant certificates though the applicant cannot pass an examination required for entrance into the Normal Schools. With the suspension of the free high school law, lack of system, examination and supervision in the State, what inducements are there for our able young men and women to take a Normal course or to teach after graduation in Maine?

We hope your knowledge of the work done in our Normal Schools, and of the condition of our common schools, will enable you to secure such legislation as is needed to render our public schools more efficient.

Respectfully,

G. T. FLETCHER.

STATE NORMAL AND TRAINING SCHOOL, }
Gorham, Maine. }

To Hon. E. S. Morris, State Superintendent of Schools.

DEAR SIR: In accordance with the law, I have the pleasure to submit the following report of the first year's work of the Normal and Training School at Gorham. This institution was established by the State for training teachers by the following act:

STATE OF MAINE.

In the year of our Lord one thousand eight hundred and seventy-eight.

An Act to establish an additional Normal School.

Be it enacted by the Senate and House of Representatives in Legislature assembled, as follows:

SECTION 1. There is hereby established another Normal School upon such plan as the Board of Trustees of Normal Schools may direct.

SECTION 2. Said Normal School shall be located at Gorham, in the county of Cumberland, provided and upon condition that there be conveyed to the State by the proper authorities, for the use and purposes of such a school, land and buildings thereon, situated in said town, such as shall be, in the judgment of the

Trustees of the Normal Schools, of sufficient capacity and in such condition as to meet fully the demands of said school. And said Trustees, upon such conveyance, are authorized to procure teachers and put in operation such school, and cause the same to be conducted at a cost per year not greater than that of either of the present Normal Schools, such cost to be deducted and paid from the public school fund.

In accordance with the provisions of the above act, the people of Gorham raised by loan and private subscription twenty-seven thousand five hundred eleven dollars and seventy-one cents, to carry out the purposes set forth in the above act, and the plans of the Trustees of the Normal Schools.

The town appointed a building committee, who purchased a beautifully located lot of five acres, and proceeded to build thereon a school building, of which the following is a description: The style of the building is modern Gothic. The entire edifice rests on a solid ledge. The foundations are two feet thick, and laid in cement mortar. The underpinning, outside steps and buttresses are of granite. All of the exterior walls and main partitions are of brick, fourteen inches in thickness. The outside course of the exterior walls is of face brick. All the window and door trimmings, belt and string courses are of Nova Scotia freestone. The general ground plan of the building is in the form of a cross, the vestibule and dressing rooms forming the head, the main building making the two arms, and the two model school-rooms the foot. The principal entrance opens into a vestibule 33x19 feet, in which are two flights of wide stairs leading to the second and third stories. On the right and left of the vestibule are the dressing rooms, each 10x19 feet. From the vestibule there is a corridor 10 feet wide, running through the main building, and communicating with the entrances to the model school rooms. On the right of the corridor is a class room, 24x27 feet, and a laboratory also 24x27 feet. On the left of the corridor are three class rooms, one 17x34 feet, and the other two 12x27 feet each. All can be thrown into one room by sliding partitions.

Each of the model rooms is 22x26 feet. Each has an outside entrance opening into a corridor 9 feet wide, running at right angles with the main corridor and connecting with it, thereby giving three spacious entrances to the building on the ground floor.

The second floor contains a staircase, hall 33x17 feet, the main hall and schoolroom 48x70 feet. In the rear, over the model

school-rooms, are a class room, 34x22 feet, teachers' room, 17x22 feet, and library 17x22 feet.

The first floor is 14 feet high in the clear, the second 16 feet. In the basement are located the steam boiler, cisterns, water tanks and water closets. The third story is unfinished.

All the interior finish is of Michigan pine, oiled and varnished. The floors throughout are Georgia pine. The whole building is thoroughly heated by steam.

The school-rooms are furnished with the "Hartford" desks and seats, and with settees, teachers' tables and desks. The building, so finished and furnished, together with the school boarding house, a brick building containing forty rooms for students, the same newly painted, papered and repaired, and furnished with a steam heating apparatus, with some five acres of ground around said boarding house, was conveyed to the State by deeds from the town of Gorham and citizens thereof. The Trustees, in behalf of the State accepted the same, and having furnished the school with maps, charts, books of reference and other needed appliances, elected a board of teachers and opened the first term of school on January 29, 1879. Eighty-five pupils were accepted after examination, at the beginning of the first term.

At the close of the year, diplomas were conferred on forty-five young ladies and gentlemen. This school, as you are well aware, is an experiment. Its prime purpose is to improve the teaching force in the ungraded schools. With this object in view the trustees fixed on a course of one year. The examination at the entrance is at least equal in grade to that to which applicants are now subjected in examination for places as teachers in the common ungraded schools of New England.

After passing such an examination, the pupils have a thorough review of one year in elementary English studies, with constant practice in teaching in their own classes, as well as in the model schools.

Their temper and disposition, their power to govern and their ability to teach are thus fairly tested. They also have instruction during the year in the theory of teaching and managing schools, and the two excellent model schools connected with the institution afford a good opportunity to put such theoretical instruction into practice, and thus secure both the theory and the practice of teaching.

The graduates have shown such attainment during their year's course in the school, that all who have witnessed their work have high hopes of their success as teachers and feel justified in saying that the experiment so far seems to promise very great good to the common schools.

The class offering themselves for admission at the beginning of the first term were examined on the following named subjects, being required to answer the following questions :

READING.

1. Define articulation. Name the consonants.
2. What is inflection? Define rising and falling inflections.
3. Write a sentence in which the circumflex is proper.
4. What are meant by tone, pitch and rate in reading?
5. Define emphasis.
6. "On a bridge I was standing, one morning,
And watching the current roll by,
When suddenly into the water
There fell an unfortunate fly."

Mark the emphatic words.

NOTE.—In all these exercises deductions to be made for bad spelling and writing.

GEOGRAPHY.

1. What is meant by the axis of the earth? If produced, where would it meet the northern heavens? How would you teach a child to find the north star? Mention any groups of stars which never set in this latitude. Around what star do they seem to revolve, and in what direction?

2. Name the five systems into which the rivers in North America may be grouped, and the principal river in each.

3. Name the countries of Europe with their capitals.

4. Trace the water route from San Francisco to New York, thence to the largest city in Europe.

5. Give the boundaries and width of each zone. What determines the place of these boundaries?

6. Draw a map of North America, putting in boundaries of countries, location of capitals, chief rivers and mountains.

7. Draw map of Maine. Put in chief towns, rivers and highest mountains.

ARITHMETIC.

1. Define abstract and concrete numbers; prime and composite numbers; prime factors.
2. Write in Roman numerals, 1818, 69, 1013, and give the law of increase and decrease in Roman numerals.
3. What factors make up the least common multiple of several numbers, and what factors make the greatest common divisor of several numbers.
4. Multiply $2\text{-}3 \times 3\text{-}5$, and explain in full.
5. Multiply four hundredths by four millionths. Give the explanation of the pointing. Divide the four hundredths by four millionths. Give the explanation of the pointing.
6. What is the difference in the products of $3\ 1\text{-}10$ by $2\ 1\text{-}9$, and $2\ 1\text{-}10$ by $3\ 1\text{-}9$?
7. What difference in time does a difference of one degree of longitude make and why?
8. Analyze fully: If $\$7\ 3\text{-}4$ pay for $2\ 2\text{-}3$ yards, how many yards can be bought for $\$4\ 5\text{-}8$?
9. A man bought 320 acres of land for $\$16.37\ 1\text{-}2$ per acre. He kept it a year and sold it for $\$6,172.72$. What per cent did he make?
10. Interest of $\$1,728$ for two years, 7 months, at $7\ 3\text{-}10$ per cent.?

GRAMMAR AND ANALYSIS.

1. Give the analysis of the following:

*"All worldly shapes shall melt in gloom,
The sun himself must die,
Before this mortal shall assume
Its immortality."*
2. Parse the italicized words.
3. Classify the words light, round, square, die, use, farther, so.
4. Write the plural of lady, man, ox, pea, chimney, roof, genius, axis.
5. Give the past indicative, and past participle of lay, choose, hang, lie, set, be.
6. Inflect the personal pronouns of the 1st and 2d persons and the 3d person feminine.
7. When several possessives are connected, to how many of them must the sign be annexed? Illustrate.

8. Correct or justify the following expressions :
- a. "Peace of mind is easier lost than gained."
 - b. "His brother's offense is not his."
 - c. "The work has been finished last week."
 - d. "He laid down to rest."
 - e. "There remain two points to be settled."
 - f. "Those sort of people should be avoided."
 - g. "The committee were divided in their opinions."

9. Write a brief, but complete composition on the following outline: Two boys walking in woods. A squirrel runs into his nest. Boys dig it out. Take his winter store of nuts. Despair of the old squirrel. Sufferings of the young squirrels.

10. Separate into syllables ten of the words used in your composition; mark the accented syllables and mark each vowel with its proper sign.

MENTAL ARITHMETIC.

1. A ship in four hours sails 24 miles. How long will it take her to sail 150 miles?
2. How many times is $3-7$ contained in $2-3$?
3. What number increased by its half, its fourth and 18, will be doubled?
4. One man builds 10 rods of wall while another builds $3\frac{1}{2}$ rods. How many rods can the first build while the second builds 60 rods?
5. John can do a piece of work in two days; James in four days. In what time can both do it?
6. If \$40 worth of provisions lasts 10 men 12 days, how long will \$50 worth last 15 men?
7. What cost 20 pears at two for three cents?
8. 20 is $\frac{5}{100}$ per cent. of what number?
9. Interest of \$125 for seven years, at 7 per cent.
10. $4-5$ of a post is above and 12 feet below the ground. What is the length?

HISTORY.

1. State the difference in the first colonists of Virginia and New England.
2. Some account of the causes of the French and Indian War.
3. Some account of the battles of Bunker Hill and Yorktown.
4. What was the "Stamp Act," "Right of Search," "Missouri Compromise," "Monroe Doctrine?"

5. Of what was the "Right of Search" one of the principal causes? Describe the last battle of that war.
6. Name causes of Mexican war.
7. Name causes of the Rebellion. Name five leading generals of the rebels. Five of the loyal troops.
8. Name some results of the rebellion.
9. What were the "Alabama Claims," and how settled?
10. What is meant by the "Resumption Act?"

PHYSIOLOGY.

1. Define the terms absorption, secretion, nutrition and respiration.
2. What gives color to the blood?
3. What are voluntary and involuntary muscles? How do the teeth differ from the other bones?
4. State the position and use of the liver. What is the epiglottis, and what its use?
5. What fluids must be mixed with food before it can nourish the body? Where are these fluids secreted?
6. Why is more food needed in winter than in summer?
7. Describe the mechanism by which the blood is returned to the heart through the veins.
8. By what means is the chest enlarged and contracted in breathing? Trace the change in the air inhaled in the act of breathing.
9. By what means is animal heat generated and maintained?
10. Name the organs concerned in the process of digestion.

BOOK-KEEPING.

1. Write a negotiable note on demand.
2. Write a negotiable note due in six months.
3. Write a receipt for money, on wages.
4. Make a bill for services as teacher.
5. Write an order on a person for money.
6. Make a bill for goods and receipt it properly.
7. Enter on day book the following account of transaction: I bought of Joe Smith, 14 yds. prints at 12 cents; 41 lbs. sugar at 10 1-2 cents; 1 pair shoes at \$2.25. Sold him 3 cords wood at \$5.00.
8. Post the same into Ledger.
9. Write a note for balance.
10. Close up the account in the books.

Maintaining a fair rank on the above questions, eighty-five were admitted. Many dropped out by the way. Some were sick, some could not get the means to pay their expenses, some had no qualities which would make them passable teachers and so were advised to leave. Many left to teach, most of whom will return to complete the course. The teachers thought that forty-five were entitled to diplomas. Their names and post office address are given below.

The diplomas were all alike. The teachers of the school gave to the young ladies and gentlemen certificates of three grades, first, second or third, expressing the teachers' view of the present standing of the graduate in knowledge, temper and disposition suitable to teach; power to govern shown by actual teaching in the model schools, and power to teach shown in the same way. These certificates are the private property of the holders. But it seemed to those graduating, as well as to the school and to the State, fair and desirable, that some distinction should be made in the standing of the graduates.

It is respectfully submitted, that the examination at the entrance of the school, the year's constant work, the actual practice in teaching in the model rooms, afford a better test of fitness to teach, than any mere examination can possibly do, and therefore the diploma, or the diploma and certificate of the Normal School should be made, by law, a valid certificate, entitling the holder thereof to teach, without other certificate, in any school in the State.

W. J. CORTHELL, *Principal.*

MAINE CENTRAL INSTITUTE, }
Pittsfield, Dec. 6, 1879. }

Hon. Edward S. Morris, State Superintendent of Common Schools.

I submit the annual report of the Normal Department of the Maine Central Institute. The school year, containing forty weeks, began November 4, 1878, and closed October 24, 1879. The number of pupils in attendance in the winter term was 15; in the spring term, 22; in the summer term, 16; and in the fall term, 27, making a total of 80 for the year. Besides, there was a teachers' class in the fall term open to the other students of the Institute.

Those of mature age or advancement can complete our course of study in two years; some younger than the prescribed ages are allowed to enter, giving three years to the course.

The following is a list of text-books used during the year:

White's Practical Arithmetic and Greenleaf's Elementary Algebra, Loomis's Geometry, Whitney's Essentials of English Grammar, Norton's Physics, Youman's Chemistry, Hutchison's Physiology, Wood's Botany, Smith's Free-hand Drawing, Meservey's Book-Keeping, Hart's Rhetoric, Franklin Sixth Reader, Martin's Civil Government, Lockyer's Astronomy, Thalheimer's General History, Higginson's History of the United States, Dana's Geological Story, Hopkins' Outline Study of Man, Fairchild's Moral Philosophy, Shaw's English Literature in connection with selections from authors, Jhonnot's Didactics.

Some of the reference books are:

Webster's and Worcester's Dictionaries; Johnson's and Chamber's Cyclopaedias, Wickersham, Hart, Currie, in Didactics.

Three graduated last June, and five are to graduate the next June.

The proportion of graduates to our number is less than in exclusively Normal Schools, from the fact that students after pursuing the Normal course here for a year or more enter a longer course of study and graduate from the higher course of the Institute.

Respectfully submitted,

CYRUS JORDAN, *Principal.*

OAK GROVE SEMINARY, }
Vassalboro, Jan. 24, 1880. }

Hon. E. S. Morris, State Superintendent of Common Schools.

DEAR SIR: I herewith submit the Annual Report of the Normal Department of Oak Grove Seminary for the school year beginning Nov. 19th, 1878, and ending Nov. 7th, 1879. This department has been in successful operation thirty-three weeks.

The following is a list of students in attendance, with age, date of entering, leaving and weeks present.

Thirty-four of the above have engaged in teaching; nine have completed the course. The following is a list of text-books used:

ENGLISH DEPARTMENT. Mathematics, Greenleaf's; Grammar, Harvey; U. S. History, Barnes; History of Greece, Goodrich; History of Rome, Goodrich; Natural History, Hooker; Evidences of Christianity, Whately; Political Economy, Champlin; Analysis, Welch; Reader, Hillard; Geography, Physical and Political, Monteith; Speller, Worcester; Ancient Geography, Mitchell; First Lessons in Composition, Hart; Rhetoric, Hart; Science of Government, Alden; Mental Philosophy, Haven; American Literature, Hart; Dictionaries, Webster and Worcester.

Very respectfully.

EDWARD H. COOK, A. B., *Prin.*

MADAWASKA TRAINING SCHOOL.

Under the act of 1878, the trustees of normal schools established a school at Fort Kent with Vetal Cyr, B. S., a graduate of the class of 1876, of the State College of Agriculture and the Mechanic Arts, Principal, and Miss May B. Morrell, a graduate of the normal school at Farmington, Assistant. The course of study adopted in these schools was a thorough review of the elementary branches usually taught in our common schools. Quite a percentage of the pupils of these schools had but little knowledge of the English language. Some of them could not speak the language to any great extent when they joined the school, therefore the instruction for that class must needs be very elementary and even primary in its character. The design of the Madawaska Training School is to educate a class of teachers, to teach the common district schools in the French districts. The instruction in this training school is to be in English, it being the design and intention of the State to educate the citizens of this region in the English language.

This school is not a High School or an Academy, but, as its name indicates, will be particularly devoted to the training of teachers.

It continued in operation twenty-two weeks at Fort Kent, when it was removed to Van Buren, forty-five miles below, upon the river St. John. The school population of this interesting portion of our State numbers nearly thirty-five hundred. The State wishes to educate all its children in the language of the State and Nation, and to make them an English-speaking people. The laws are printed in English, the business of the courts is transacted in the same language, the deeds under which this people hold their farms are written in, to some of them, a foreign language. The instruction given in the training school is entirely in the English language. Many of the pupils attending this school have taught, but perhaps the larger part have not yet been engaged in teaching, but are preparing themselves to teach in the near future. Those employed to teach in this region must almost of necessity be able to talk the French language, for as yet many of their pupils understand no other. These teachers have had no opportunity to prepare themselves to teach English. This training school supplies the want, and while the pupil-teachers are getting a knowledge of the language, they are receiving instruc-

tion in the best methods of teaching. They are not only being instructed in *what* to teach but *how* teach.

The Superintendent visited this school in the month of June, while it was in operation at Van Buren, and he can cheerfully bear testimony to the faithfulness of both teachers and pupils.

Since that visit, the assistant teacher, Miss Morrell, has died, and her place has been supplied by Miss L. Maria Knight, who is also a graduate of Farmington Normal school. From reports received, the school is doing good work, and as it continues from year to year the standard will be raised in the school, the standard for teachers in the Madawaska district will be raised, and the education of this interesting people will become more general and of a higher grade. It is to be hoped that the State will take no backward steps, but continue to appropriate a sum sufficient for the expenditures of the school. The report of the principal is referred to for further information.

MADAWASKA TRAINING SCHOOL, }
Fort Kent, Dec. 10, 1879. }

Hon. E. S. Morris, State Superintendent of Common Schools.

I have the honor of submitting the first annual report of this school for the year ending September 5, 1879.

The school year consisted of forty-four weeks, divided into four terms, two of which were held at Fort Kent and two at Van Buren. The first two terms were held at Fort Kent with an attendance as follows: Fall term, 46, winter, 49; the last two terms were held at Van Buren with an attendance of 32 during the spring term and 34 during the summer term. The following text-books were in use: French and English Royal Reader, Harper's and Swinton's Geographies, Hagar's and Robinson's Arithmetics, Quackenbos' Grammar and Language Lessons, Harper's Smaller United States History, Payson and Dunton's Book-Keeping, Kinsi's Free-Hand Drawing, the Spencerian Copy-books, Webster's Dictionary and the French *Neuveau Traité*. Many books were kept on the teachers' tables for references, to which pupils had free access. The instruction was not confined to the line of any text-book, although the best were in use, but the design was to make the school in a true sense *practical*, adapting it to the advancement of the pupils.

Your official visit during the summer term has made you familiar as to the necessity of such a school in this territory and with the general character of its work. The aim of the teachers has

been to assist the pupils in securing a thorough knowledge of the *elements* of the common school studies, and to make them sufficiently familiar with the English language to enable them to teach the same in that tongue. As a very large percentage of the pupils did not speak English, and many could not even understand it when they joined the school, the progress was necessarily very slow, making sure of *one step* before taking another.

It being the first year of the school the methods adopted were as experiments, and the instructions need be very elementary and even primary in their character, owing to the limited previous preparation of the pupils. Nearly all entered the school with the intention of fitting themselves to teach and remained throughout the two terms held in one place.

It had been recommended that professional work by the pupils should accompany every step of the work; and this was practiced to a certain extent, though not as much as desirable on account of the variety of grades and the amount of time necessary to the teachers in giving instruction; also believing that one must *know* before he can apply, the teachers felt content for the present in using the best methods and teaching *what* and *how* to teach.

A primary class of children was formed during the summer term to which one hour daily was given, and here the students had some opportunities for observation and practice in teaching. The results of this experiment were very satisfactory and of a practical benefit to all.

It would be for the advancement of the school and all the common schools were there a grade for admission and a course of studies established.

The *grade for admission* would excite an interest in those who wish to attend to fit themselves at the common schools, and thus better teachers would become necessary and better teachers would be employed.

The *course of studies* would mark out a certain amount of work to be done, and would encourage those attending to persevere till this was accomplished, giving as a result a more intelligent class of teachers.

Very respectfully submitted,

VETAL CYR, *Principal.*

The State makes no separate appropriation to support the normal and training schools. These schools, that are devoted to the training of teachers for the common schools, are sustained out of the *fund* that *belongs* to the common schools. The Legislature of 1879 appropriated \$18,000 for the several normal schools, and \$800 for the Madawaska Training School, but this entire amount was deducted from the common school fund, before the apportionment was made to the cities, towns and plantations, and the balance only was apportioned according to the number of scholars returned. The common schools therefore *pay* for these schools, and *pay* for *better teaching*, (if the normal schools can give better teaching) but they are *defrauded*, for by our present system of hiring and certificating teachers, these teachers, educated by the common schools, are prevented from paying the debt they owe to their benefactors.

If a skilful and wise physician is called to the bedside of a sick patient he is desirous to know the unfavorable as well as the favorable symptoms in his patient's case. He cannot otherwise skilfully prescribe for the case. If we wish to improve our schools, we must look to the unfavorable rather than to the favorable symptoms. The assertion is sometimes made by men of culture and intelligence that our schools are not so good to-day as they were fifty years ago. This is not true, our schools have made a very great advance within that time, but it is very safe to say that the schools of fifty years ago were better adapted to the wants and requirements of that day, than the schools of the present are to the wants and requirements of to-day. In almost everything, wonderful advancement has been made in the last half century. Wonderful inventions have been made in every branch of the mechanic arts. Discoveries in science have been made of a nature to startle mankind. Fifty years ago the mails were carried on horseback to many places that are now supplied by railroads.

These were the days of slow coaches, of ox and horse team freight wagons, of the hand rake, and scythe, and sickle, and wooden plow in agriculture, of burning wood of cord wood length upon the kitchen hearth and covering up the remains of the back log over night from which to kindle the fire in the morning. In those days it was a full month before it was known who was elected President of the United States. Now, the next morning papers *usually* settle the question. Everything is now conducted upon the "high pressure" principle. Time and space are almost

annihilated. Lightning has been pressed into service to carry our messages. Steam has been broken to harness, and now an obedient servant draws our cars, propels our monster ships against wind and tide, and drives, with tireless energy, thousands of manufacturing factories throughout the land.

Our schools have been distanced in the race. While such wonderful progress has been made in almost every branch of human activity, we have been content to see our schools move along with a snail's pace, blinding ourselves to the fact that the schools of the State, and most of New England even, are far behind the younger states of the West. Occasionally a faithful band of teachers meet together in convention and discuss school matters, point out the wants and how to remedy them, pass resolutions, pay their hotel bills and go home to meet again the next quarter and go through with the same routine. The general public, the fathers and mothers of the school children, are not reached and public sentiment is not changed by these meetings. A revival is necessary, the public mind needs to withdraw for a while from the business cares and turn toward the children of the State. How can this be effected ?

In one of the counties of West Virginia a live and energetic man who had been promoted from the school-room to the superintendency of Monongalia county, arranged for a course of studies in the eighty common schools under his charge, and in which the pupils from the schools could graduate, classes were arranged, teachers were encouraged to interest as many as possible to take the full prescribed course, parents became interested, regular examinations were held, good teachers were permanently employed, a spirit of emulation was aroused between neighboring localities, until the whole community was aglow with excitement at the new order of things. At the regular examinations the largest churches in the neighborhood would hardly hold the crowds of interested parents. This revival has extended into the adjoining counties and over the line in phlegmatic Pennsylvania, until the little leaven of Monongalia county bids fair to leaven the whole lump. At the meeting of the National Teachers Association last August in Philadelphia, Mr. Wade the Monongalia Superintendent, was invited to prepare a book upon the subject of graduation in the country district school with the view of making it a feature of the common school system of the several states. This system has been in operation four years in the county in which it was started,

classes have graduated, diplomas have been given, alumni associations have been formed, and the interest continues unabated.

We welcome anything that will raise our schools above the dead level and turn the attention of parents toward the instruction and improvement of their offspring. Public sentiment only needs to be aroused and turned in the right direction and the needed reform would be started. We must cease to consider our school system as faultless, and our schools perfect, or we never shall see the necessity for reform.

IN CONCLUSION.

First. We need the whole community to be alive to the necessity of having better schools for the education of our children. This awakened community will see

Second, That we have larger schools by the abolition or consolidation of school districts.

Third, That these larger schools have better educated and trained teachers, with long terms of service in the same school, and

Fourth, That the schools have better supervision parental as well as official. Until an enlightened public sentiment shall make the demand, the common district school, in which nearly three-fourths of our children get all their education, will not make very great strides in advancement.

APPENDIX.

COMMON SCHOOL STATISTICS,

Compiled from Annual Returns of S. S. Committees and Fiscal Returns of Municipal Officers, for the year ending April 1, 1879.

ANDROSCOGGIN COUNTY.

TOWNS.	No. of children belonging in town between the ages of 4 and 21 years.	Number registered in Summer schools.	Average number attending Summer schools.	Number registered in Winter schools.	Average number attending Winter schools.	Number of different pupils registered.	Percentage of average attendance.		Average length of Winter schools of 5½ days per week.		Number of districts in town.	Number of parts of districts in town.	Number of school houses in town.	Number in good condition.	Number of school houses built this year.	Cost of the same.	Estimated value of all School property in town.	Number of Male Teachers employed in Summer.	Number of Male Teachers employed in Winter.

*These amounts include the State Tax upon wild lands in unorganized places.

ERRATA.

The reader will please make the following corrections :

- On page 3, of the Appendix in the column " Balance unexpended April 1, 1879," opposite Lewiston for \$4,345 read—\$4,345, as the expenditures of that city are greater than the "Total School Resources" by that amount.

In the total for the same column for \$7,272 read—\$1,418.

On page 7, in the same column opposite Amlty for \$38 read—\$38.

Opposite Island Falls for \$6 read—\$6.

Opposite Littleton for \$11 read—\$11.

Opposite Ludlow for \$1 read—\$1.

On page 8, opposite Presque Isle for \$67 read—\$67.

Opposite Smyrna for \$1 read—\$1.

Opposite Chapman Pl., for \$15 read—\$15.

On page 9, opposite Moro Pl., for \$3 read—\$3.

Opposite St. Francis Pl., for \$2 read—\$2.

Opposite Westfield Pl., for \$5 read—\$5.

In the total for same column for \$8,180 read \$7,882.

On page 11, in same column opposite Bridgton for \$579 read—\$579.

Opposite Freeport for \$227 read—\$227.
