2018-2019 Maine School Immunization Assessment Report

State vaccination requirements for school entry protect children and communities against vaccine preventable diseases. Each school year, federally funded immunization programs collect and report kindergarten vaccination data to the Centers for Disease Control and Prevention (CDC). Federally funded immunization programs in all 50 states partner with their Department of Education (DOE) to assess vaccination coverage and exemption status of children enrolled in public and private kindergartens. In addition to kindergartens, the Maine Immunization Program (MIP) also collects coverage and exemption data for both seventh grade students and, beginning 2018-19, twelfth grade students. This information is collected through an annual immunization assessment survey of all State of Maine elementary, middle, and high schools.

Maine rules pursuant to 22 M.R.S. § 6359 requires any K-12 student enrolled in a designated public or private elementary, secondary, or special education facility which operates for children of school age to show proof of immunization with the following vaccines or documented immunity against the following vaccines:

- Diphtheria/Pertussis/Tetanus: Five doses of any DTP, DT or DTaP vaccine, a fifth dose is not needed if the fourth dose was administered on or after the fourth birthday. Beginning September 2017, one dose of Tdap is required for seventh grade entry;
- Measles/Mumps/Rubella: Two doses of MMR vaccine;
- Poliomyelitis: Four doses of OPV or IPV vaccine, a fourth dose is not needed if the third dose was given on or after the fourth birthday; and,
- Varicella: One dose of varicella (VAR) vaccine.
- Meningococcal Meningitis: Beginning September 2018, one dose of quadrivalent meningococcal meningitis vaccine (MenACWY) is required for seventh grade entry and two doses of MenACWY are required for twelfth grade entry.

A child who does not meet the immunization/immunity requirements above may be enrolled in school under the following circumstances:

- The parent provides the school with written assurance that the child will be immunized within ninety days of enrolling. This is a one-time provisional 90-day grace period.
- The parent (or child) presents to the school each year a physician's written statement that immunization against one of more of the diseases may be medically inadvisable (medical exemption in annual survey).
- The parent states in writing each year an opposition to immunization because of a sincere religious belief or for philosophical reasons (religious or philosophical exemption in survey).

The 2018-19 Maine Annual School Age Immunization Survey was conducted online from October to December 31, 2018 and aggregate results for kindergarten students were reported to the CDC in April 2019. The following tables (Tables 1-3) list the aggregate results gathered from the 2018-19 Maine Annual School Age Immunization Survey.

The annual immunization and exemption rates for each individual reporting school in Maine can be found on our website at: http://www.maine.gov/dhhs/mecdc/infectious-disease/immunization/publications/index.shtml

School vaccination requirements provide an opportunity for children who are behind on early childhood vaccinations to be vaccinated by school entry. School vaccination assessments allow MIP to identify schools and communities where focused action could improve vaccination coverage to ensure that more children can benefit from the protection offered by vaccines. MIP and DOE will use this data to monitor incomplete vaccination records, coverage rates and exemptions and work with schools to ensure that all students receive all required Maine State school age vaccines.

Vaccination is the most effective and efficient way to ensure that students and their family members, particularly those who are immunocompromised, are protected against these vaccine preventable diseases. This is perhaps one of the most important reasons why it would be advantageous for Maine State educational institutions to meet all requirements of the Immunization Requirements for School Children state law and to help reach the goal of the Maine Immunization Program to bring the State vaccine coverage rate average for each of these vaccines to 100%.

The Vaccination Coverage Among Children in Kindergarten – United States, 2018-19 School Year report data will be released in the fall of 2019. Historical reports were analyzed and graphical representations for each vaccine surveyed show trending comparisons for Maine and U.S. immunization rates and exemption rates over the past 5 years (Figures 1-7). Please be aware that 2018-19 includes Maine only at this time until National data is released in October 2019.

Additionally, graphical representations of immunization rates for Maine kindergarten students have been generated to show county specific rates compared to overall Maine state rates (Figures 8-11). Herd immunity (or community immunity) occurs when a high percentage of the community is immune to a disease (through vaccination and/or prior illness) making the spread of the disease from person to person unlikely. Herd immunity targets of 95% have been added to individual county vaccination rate graphs to represent which counties in Maine are susceptible to widespread disease.

As always, thank you for your commitment to keeping Maine's children free of vaccine preventable disease.

*** Data Source: 2018-19 Maine School Age Immunization Assessment Survey

Regarding the Kindergarten Cohort:

- Vaccine rates decreased for all individual antigens.
- Exemption rates increased for each individual type of exemption .
- Total exemption rate increased from 5.3% to 6.2%.
- The percentage of missing immunizations decreased from 1.4% to 1.1%

Regarding 7th Grade Students:

- One dose of Tdap became a requirement for 7th grade students for the 2017-18 school year. One dose of MenACWY
- Exemption rates increased for each individual type of exemption .
- Total exemption rate increased from 4.6% to 4.7%.
- The percentage of missing immunizations increased from 2.4% to 3.8%

Regarding 12th Grade Students:

Two doses of MenACWY became a requirement for 12th grade students for the 2018-19 school year.

First year of 12th grade data. No comparison available.

Maine Immunization Program Data Sources

The Maine Immunization Program (MIP) utilizes several data sources to assess statewide and county level immunization rates.

Maine School Immunization Assessment Survey

Each school year, federally funded immunization programs in all 50 states partner with their Department of Education to assess vaccination coverage and exemption status of children enrolled in public and private kindergartens. In addition to kindergarten, MIP also collects coverage and exemption data for selected vaccines in both seventh and twelfth grades. While the legislative rule requires schools to report on an annual basis, not every school in the state complies with this mandate.

National Immunization Survey

The National Immunization Surveys (NIS) are a group of phone surveys used to monitor vaccination coverage among children 19-35 months, teens 13-17 years, and flu vaccination for children 6 months-17 years. NIS provides household, population-based, state and local area estimates of vaccination coverage among children and teens using a standard survey methodology. Annually, approximately 15,000 persons nationally are surveyed for each specific survey above and Maine's portion of this sample size is very small, comprised of only 200-300 children/teens for each survey.

Maine Immunization Information System (ImmPact)

Quarterly, MIP runs vaccination coverage rates for both children 24-35 months of age and teens 13-17 years of age directly from the data available in ImmPact. Any clients associated to a fully integrated practice (a practice that enters all client specific immunizations at time of administration) are included in these rate assessments. ImmPact includes approximately 89% of all children and teens 0-17 years of age based on population census data.

While all of the data sources above provide accurate and useful data, they should not be compared to one another or used as a means to exclude the validity of one data source over another. Each survey has a different target age, sample size, vaccines assessed, and a most importantly is used differently to identify pockets of need within the State of Maine and areas for improvement. The below graph identifies these differences.
