SUMMARY

This bill would have enacted plumbing efficiency standards for new plumbing fixtures installed as part of new construction or renovation to help conserve water supplies and energy. Basic standards for toilets, shower heads and faucets are proposed. Residential construction would have had to be in compliance with these standards by July 1, 1992; commercial construction, by July 1, 1993.

Exemptions would have been allowed for repairs that do not involve plumbing, noncompatible plumbing systems, residential buildings on private wells and for special-purpose plumbing fixtures. Municipalities would have had to enforce these provisions to be eligible for pollution abatement grants.

In addition, this bill proposed to require water utilities to undertake water conservation and education programs, to make conservation fixtures available to their consumers and to educate their users on the hazards of disposing of inappropriate wastes in their toilets.
