**LD 1895 An Act Regarding Energy Costs**

WADSWORTH N		

This bill was carried over from the Second Regular Session to the next special session by joint order S.P. 748. The bill was not referred to committee.

Current law requires the Public Utilities Commission to assess a gas utility an amount necessary to fund the natural gas conservation fund, a fund administered by the Efficiency Maine Trust, which must be used to promote the efficient use of natural gas. The assessment may be collected from consumers of the gas utility. The commission is required to return the value of any funds collected but not used after two years to consumers.

This bill requires the trust to remit any funds held in the fund more than two years after being collected to gas utilities. A gas utility receiving such funds may use those funds to assist residential or commercial consumers or potential consumers in using natural gas for heating. If a utility does not use or contract for the use of such funds within one year of receipt, the utility must return the funds to the trust and the commission is required to determine how to return those unexpended funds to consumers.

**LD 1896 An Act To Improve Efficiency through Electric Rate Design and Advanced Technology**

This bill requires the Public Utilities Commission to promote recovery of fixed transmission and distribution costs through fixed customer costs, to the extent practicable and economically efficient, and to examine and make appropriate changes to transmission and distribution utility rate class designations to the extent such changes would improve equity and economic efficiency. The bill further requires the commission to implement transmission and distribution rates that vary by time of day and season or other relevant cost drivers, to the extent practicable, to achieve economic efficiency.

The bill requires investor-owned transmission and distribution utilities to submit specific rate design proposals to the commission by January 1, 2019, and provides that such plans must include proposals for implementing cost-effective programs and load-control technologies to optimize distribution circuit and transmission system load profiles and rates or programs that encourage incremental usage if such uses would lower rates for all customer classes. The bill removes the requirement that transmission and distribution utilities' proposals include cost-effective conversions of electric space heat systems.

The bill also removes the requirement that rate design changes implemented pursuant to the Maine Revised Statutes, Title 35-A, section 3153-A be implemented on a temporary, pilot or experimental basis and requires the commission to implement policies and practices to encourage competitive electricity providers to offer residential and commercial customers supply prices reflective of real-time market price variations.
