Under current law, a disposal ban on mercury products from household sources becomes effective in January 2005. In order to expand current efforts of municipalities and regional waste associations to establish household hazardous waste collection programs, this bill generates revenue for the purpose of providing state cost share support for the operational costs incurred by municipalities in the management of household hazardous waste. Revenue is generated by imposing a 20¢ fee on the retail sale of architectural coatings sold in containers of one gallon and on each unit of general use pesticide distributed for retail sale in this State.
