The strategies must involve approaches and models that recognize and address population densities and the high cost of providing service to low-density areas; ensure the inclusion of services to all individuals and communities, including the most disadvantaged populations, within the area, commonly referred to as "digital inclusion"; and ensure the capacity of relevant communities to undertake a comprehensive approach to bringing broadband to the area. The strategies must involve consideration of requirements to receive available funding for expanding high-speed broadband connectivity as well as the critical nature of providing the connectivity in a time frame that meets the needs of the area.
