H.P. 1169 - L.D. 1572**

**Resolve, To Analyze the Impact
of Sea Level Rise**

Preamble. Whereas, the scientific and technical subcommittee of the Maine Climate Council determined it is likely that the sea level in Maine will rise between 3 and 5 feet by the year 2100 based on an intermediate sea level rise scenario, although scenarios of higher rise are physically plausible; and

Whereas, a one-foot increase in sea level in the future will lead to a 15-fold increase in the frequency of nuisance flooding and would cause a 100-year storm flood level to have a probability of occurring once every 10 years; and

Whereas, communities with a strong dependence on waterfront and shorefront industries such as tourism, ports and fishing will be heavily disrupted by increased flood frequency; and

Whereas, sea level rise of 4 feet by 2100 is projected to cause more than \$671,000,000 in cumulative building losses and \$665,000,000 in gross domestic product losses in Maine; and

Whereas, 1.5 feet of relative sea level rise by 2050 and 4 feet by 2100 would cause immersion and submersion of land and accompanying materials, structures and facilities that are not currently designed for those conditions and, therefore, present a threat of release of pollutants to the environment; and

Whereas, the scientific and technical subcommittee of the Maine Climate Council has recommended that the State manage for 1.5 feet of relative sea level rise by 2050 and 4 feet by 2100; now, therefore, be it
