The number of deaths recorded in the State for the same year was 11,133, a number 256 larger than that of the deaths registered in the preceding year. The number of deaths in each year thus far recorded is: in 1892, 12,147; in 1893, 11,134; in 1894, 11,012; in 1895, 10,464; in 1896, 10,626; in 1897, 11,236; in 1898, 10,956; in 1899, 11,370; in 1900, 11,389; and in 1901, 11,133.

Compared with 1900, among the chief causes of death, there were in 1901, 44 more from cancer, 35 more from nephritis and Bright's disease, 31 more from diseases of the heart, 30 more from influenza, 28 more from typhoid fever, 35 more from tuberculosis in all its forms, and 13 more from diabetes. On the other hand, there was a smaller number of deaths from the following causes: from diarrheal diseases, 121 fewer; from diseases of the nervous system, 76; from pneumonia, 73; from whooping cough, 71; from measles, 58; from bronchitis, 40; from diphtheria, 28; from scarlet fever, 17; and from peritonitis, 6 fewer deaths than in 1900.

*Bertillon Classification.*—The nomenclature of the causes of death in this report is the revised Bertillon classification adopted by the International Commission which met in Paris in August, 1900.

Table No. 1 gives a cursory view of the relative mortality in 1900 and 1901 from some of the leading causes of death.

## NOTES ON BIRTHS.

In the year 1901, 14,615 births were registered in the State, including still-births (14,028 in 1892, 14,604 in 1893, 14,607 in 1894, 15,430 in 1895, 15,429 in 1896, 15,142 in 1897, 15,121 in 1898, 14,475 in 1899, and 14,709 in 1900).

The number of living children born was 14,021, and the number of still-births was 594.

Of the whole number of living children of which the sex was certified, 7,190 were males and 6,808 were females. In 23 births the sex was not stated. For each 100 girls born there were 105.6 boys (106.7 in 1892, 107.4 in 1893, 104.7 in 1894, 106.4 in 1895, 105.3 in 1896, 102.3 in 1897, 106.0 in 1898, 104.4 in 1899, and 103.2 in 1900).

*Birth-rate.*—The birth-rate of living children for the State was 20.19 for each 1,000 of population.

Table No. 13 shows the number of births in each city with the birth-rate of each. The average birth-rate in the cities per 1,000 population was 21.04 as compared with 19.78, the birth-rate of the rest of the State.

The birth-rate of the different counties varied widely. As it invariably has been every year since the registration began, it was the highest in Aroostook, 32.62, and the lowest in Waldo, 15.05. In five counties, Aroostook, Franklin, Sagadahoc, Washington, and York, the birth-rate was above that of the whole State. The birth-rate in each county is shown in Tables No. 4 and No. 8.

*Parentage.*—Of the total births in the State, 60.43 per cent. were of native parents; 20.56 per cent. were of foreign parentage; 17.65 per cent. were of parents, one of whom was foreign; while of 1.36 per cent. the nationality was not stated.

Waldo county had the largest percentage of native-born parents, to wit, 92.31 per cent., and only 1.92 per cent. in which both parents were foreign-born. Lincoln followed with 91.34 per cent. of native parentage, and only 2.39 per cent. in which both parents were foreign-born.

In Hancock county, in 88.89 per cent. of the births the parents were native-born, and in 2.40 per cent., foreign-born.

In Knox, the percentage of native-born parents was 75.10; in Oxford, 73.05; and in Somerset, 70.67.

Low percentages of native-born parents were shown in Androscoggin county, where, in 36.98 per cent. of the births, the parents were native-born, and 44.81 per cent. were foreign-born; in Aroostook, with 55.94 per cent. native-born, and 15.68 foreign-born; in Cumberland, with 51.20 per cent.; Kennebec, with 56.99 per cent.; and in York county, with 49.13 per cent. of the parents native-born.

The percentages of parentage, whether American-born or foreign-born, may be found for the other counties in Table No. 14.

Comparing the percentage of the births in our twenty cities with that of the rest of the State, we find that, in the cities, 38.76 per cent. of the births were of American parentage, while in the rural parts of the State the percentage of American-born children was 71.46.

The largest percentage of foreign-born parents was in Biddeford, 66.18; and in Lewiston, 61.65.

In Belfast no birth was reported in which both parents were foreign, and in Ellsworth only 2.18 per cent. of the births had both parents foreign-born. For further comparison see Table No. 15.

*Seasons and Births.*—The largest number of births in any one month in 1901 was 1,303 in March; the smallest was 983 in November; the largest quarterly total was 3,750 in the second quarter; the smallest, 3,082 in the last quarter. The three consecutive months in which the largest number of births occurred were March, April, and May, 3,863.

The following is a tabular statement of the number of births in each month of the ten years 1892-1901:

*Twin-births.*—In 1901, 152 twin-births occurred; in 50 instances the twins were both boys; in 56, both girls; in 46, a boy and a girl. In 84 cases the parentage was American; in 36, foreign; in 30 instances the parentage was mixed; and in 2, it was not stated. Of the 304 children, 276 were born alive, and 28 were still-born.

*Triplets.*—In Sanford, as was the case last year, a triple birth occurred, in which the children were all living. There were also triplets in Holden, but all three were still-born. Other facts may be learned by consulting Tables No. 16 and No. 17.

*Still-births.*—Of the 594 still-born children, 312 were males and 264 were females. In 18 the sex was not stated. With the exception of four still-births, as to which the nativity of the mother was not stated, 411 were of American mothers, and 179 were of foreign mothers.

The largest number of still-births, occurred in Aroostook and Cumberland counties, 83 and 82, respectively; while the minimum number, 4, was reported in Lincoln county.

The largest number of still-births, 66, was returned in May; the smallest number was 38 in January. See Tables No. 18 and No. 19 for other details.

## NOTES ON MARRIAGES.

The number of marriages registered in the State during the year 1901 was 5,735 (5,726 in 1892, 5,795 in 1893, 5,594 in 1894, 5,729 in 1895, 5,579 in 1896, 5,331 in 1897, 5,144 in 1898, 5,329 in 1899, and 5,482 in 1900). We have, therefore, for the year 1901, a marriage-rate of 16.52 (persons married) to every 1,000 of population, or at the rate of 8.26 marriages per 1,000 persons.

*Marriage-rates.*—The marriage-rate was higher in Franklin county than elsewhere in the State, it being for that county 20.50 per 1,000. The lowest marriage-rate, that of 13.74 per 1,000, was in York county. See Table No. 4.

*Nativity.*—Of the 5,673 records of marriage in which there was a statement of birthplace, in 74 per cent. the groom and bride were both American; in 10 per cent. both were of foreign birth; in 7 per cent. the groom was American and the bride of foreign birth; while in 9 per cent. a foreign groom and American bride were united.

*Seasons.*—The largest number of marriages, 745, was solemnized in June, while the smallest number in any one month, 285, occurred in March. See Table No. 22.

*Ages of the Married.*—The largest number, both of grooms and brides, was between 20 and 25 years of age. While still under 15 years of age, 15 brides were married; in the age-period 15-20 years there were 203 grooms and 1,513 brides; in the period 20-25 years, 2,045 men and 2,129 women were married; from 25-30, 1,597 men and 1,017 women; from 30-35, 761 men and 396 women; from 35-40, 392 men and 244 women; from 40-45, 256 men and 168 women; from 45-50, 171 men and 91 women; from 50-55, 99 men and 70 women; from 55-60, 72 men and 40 women; from 60-70, 101 men and 27 women; from 70-80, 26 men and 9 women; over 80, 3 men and 2 women. The age of 9 men and 14 women was not stated. See Table No. 24.

In 4,789 marriages, the groom was older than the bride; while in 946, the bride was the elder; 759 widowers and 531 widows

were remarried; 217 men and 309 women were remarried after having been divorced from a former marriage.

Table No. 25 exhibits the fact that 4,743 men and 4,876 women were married the first time; that 874 men and 751 women were married the second time; that 104 men and 73 women were united in the third marriage; that 8 men and 5 women contracted marriage a fourth time. The oldest groom was 86 years of age, and the oldest bride was 83. In three marriages the bride was only 13 years old; and in five, the bride was but 14 years of age.

Two brides, 61 and 72 years of age, were married for the first time; and two grooms, aged 61 and 65 years, contracted marriage for the first time.

## NOTES ON DIVORCES.

Eight hundred and eight divorces were decreed in the year 1901 (552 in 1892, 627 in 1893, 674 in 1894, 681 in 1895, 668 in 1896, 722 in 1897, 764 in 1898, 790 in 1899, and 801 in 1900). In 1901, there was decreed in Maine one divorce for every 7.1 marriages solemnized.

Some of the causes for which divorces were granted are: Adultery, 64, or 7.9 per cent. of the whole number; extreme cruelty, 8, or 1.0 per cent.; desertion, 226, or 28.0 per cent.; intoxication, 112, or 13.9 per cent.; cruel and abusive treatment, 309, or 38.2 per cent.; failure to support, 31, or 3.8 per cent. The other divorces were granted for multiple or associated causes.

The wife was the libellant in 604 divorces, and the husband in 204.

In the divorces granted for adultery, the husband was the libellant 44 times, and the wife 20 times.

On account of extreme cruelty, the wife was the libellant in all 8 cases.

For desertion, the husband was the libellant 88 times, and the wife, 138.

For intoxication, the husband was the libellant in 10 cases, and the wife in 102.

For cruel and abusive treatment, the husband was the libellant in 57 instances, and the wife in 252.

For failure to support, the wife was the libellant in the 31 divorces decreed for that cause.

Thirteen divorces were granted before the marriage life had lasted one year; 227, after from 1 to 5 years marriage; 217, after 5 to 10 years; 211, after 10 to 20 years; 99, after 20 to 30 years; 33, after more than 30 years of married life; while in 8 cases it was not stated how many years they had been married. Tables No. 26 and No. 27 may be consulted for more detailed statements.

## NOTES ON DEATHS AND THE CAUSES OF DEATHS.

*Death-rates.*—The number of deaths registered in the year 1901 was 11,133 (12,147 in 1892, 11,134 in 1893, 11,012 in 1894, 10,464 in 1895, 10,626 in 1896, 11,236 in 1897, 10,956 in 1898, 11,370 in 1899, and 11,389 in 1900). The number of deaths for this registration year was, therefore, 256 less than for the year 1900, 237 less than for 1899, 177 more than for 1898, 103 less than for 1897, 507 more than for 1896, 669 more than in 1895, 121 more than in 1894, 1 less than in 1893, and 1,014 less than for 1892. The death-rate for the State for the year 1901 was 16.03 for every 1,000 of population (18.37 in 1892, 16.84 in 1893, 16.66 in 1894, 15.83 in 1895, 16.07 in 1896, 16.99 in 1897, 16.57 in 1898, 16.45 in 1899, and 16.40 in 1900).

By referring to Table No. 4, it will be seen that the death-rate of Aroostook county was lower than that of any other county, being only 13.48. The counties Androscoggin, Aroostook, Franklin, Hancock, Piscataquis, Sagadahoc, Somerset, and Washington had lower death-rates than that of the whole State; while the counties Cumberland, Kennebec, Knox, Lincoln, Oxford, Penobscot, Waldo, and York had death-rates larger than that of the State. The highest county death-rate was that of York, 18.23.

The death-rate in the cities was 17.90 (20.46 in 1892, 19.89 in 1893, 19.65 in 1894, 18.36 in 1895, 18.78 in 1896, 20.11 in 1897, 19.74 in 1898, 18.10 in 1899, and 18.34 in 1900) as compared with that of the rest of the State with the cities omitted, which death-rate was 15.13 (17.46 in 1892, 15.54 in 1893, 15.39 in 1894, 14.77 in 1895, 14.93 in 1896, 15.68 in 1897, 15.24 in 1898, 15.52 in 1899, and 15.47 in 1900).

*Seasons and Mortality.*—The largest number of deaths occurred in March, 1,132. The smallest number of deaths in any one month was 789 in June. During the spring months 3,031 deaths occurred; during the summer, 2,456; during the autumn, 2,683; in the winter, 2,943. The following shows the month in which the largest and smallest number of deaths occurred in the years 1892-1901:

Table No. 29 exhibits the total number of deaths which occurred in each month of the years 1894-1901. The number of deaths for 1901 in each month by counties is shown in Table No. 33.

*Sex and Mortality.*—Of the 11,133 decedents, 5,604 were males and 5,523 were females. The sex of six was unstated.

Among children dying before they were 5 years old, 1,141 were males and 1,009 were females; there were 132 more deaths among boys under 5 years of age than among girls within the same age-period. On the contrary, at the age-periods from 10 to 50 years there was a preponderance of deaths among females,

while there were more deaths among males at the ages from 50 to 90. At the age of 100 years and over, 8 persons died, 5 women and 3 men. See Table No. 33.

*Age and Mortality.*—The following shows the number of deaths which occurred within each age-period, and the relation which the percentage in each period bears to the whole number of deaths:

Under 1	year of age	1,558	13.99 per cent.
From 1-5	years of age	594	5.34 per cent.
From 5-10	years of age	238	2.14 per cent.

Over 100	years of age	8	0.07 per cent.
Ages not stated		95	0.85 per cent.

*The Causes of Death.*—The following table shows the mortality from ten prominent causes in the eight years 1894-1901. The various diseases of the brain have occupied the first place among the causes of death, and consumption was the next most prominent cause until 1898 when it was reduced to the third place in the list; in 1899 and 1900 it occupied the fourth place, and this year it goes back to the third place. Diseases of the heart have the second place, and pneumonia has the fourth place.

By referring to Table No. 30 it will be noticed that the causes of death are arranged by counties under fourteen classes. The following notes on some of the classes and individual causes of death will be arranged in accordance with the classification shown in this Table No. 30.

*Infectious Diseases.*—The lists of the infectious diseases usually include smallpox, measles, scarlet fever, typhoid fever, whooping cough, diphtheria and croup. The following table shows the number of deaths which resulted from these diseases in the several counties of the State:

*Typhoid Fever.*—There were 224 deaths from typhoid fever. Of these, 123 were males and 101 were females. As indicative of the loss which the State incurs from typhoid fever, it is well to bear in mind that the age distribution of the decedents shows that the deaths from this disease are principally among those active and productive age-periods when human life is of the most value; 78 per cent. died between 10 and 50 years of age.

Ages: Under 1, 2; 1-5, 4; 5-10, 18; 10-20, 49; 20-30, 58; 30-40, 43; 40-50, 24; 50-60, 11; 60-70, 6; 70-80, 6; over 80, 1; not stated, 2.

The largest number of deaths, 27, occurred in October, and the smallest number, 9, in June. By quarters, 68 were in the first quarter, 41 in the second, 46 in the third, and 67 in the last quarter of the year. In two deaths the month was not stated.

The typhoid death-rate of 5.33 in the cities is considerably greater than that in the villages and rural towns, which is 2.22. The rate for the State is 3.23.

The following exhibits the number of deaths from typhoid fever in each county by months, with death-rate in each county:

*Malarial Diseases.*—Eleven deaths were registered as due to malarial diseases. In seven cases the disease was contracted outside of this State; four of the persons having contracted the disease in the war of the rebellion, one in the Philippines; and the ages of two indicate a probability that the disease was referable to the Civil War. All of the decedents were males; their respective ages were: 20-30, 2; 60-70, 5; 70-80, 2; 80-90, 2.

*Tuberculosis.*—In 1901, tuberculosis in its various forms was the cause of 1,250 deaths (1,513 in 1892, 1,446 in 1893, 1,449 in 1894, 1,397 in 1895, 1,359 in 1896, 1,338 in 1897, 1,239 in 1898, 1,241 in 1899, and 1,215 in 1900). The death-rate per 10,000 from this cause was 18.00.

*Cerebral Tuberculosis.* (Tubercular Meningitis).—The number of deaths was 61; 21 were of males and 40 of females.

The number for the cities was 30. The death-rate for the State was 0.88; for the cities, 1.33.

Ages: Under 1, 10; 1-5, 23; 5-10, 17; 10-20, 4; 20-30, 4; 30-40, 2; over 60, 1.

*Pulmonary Tuberculosis.* (Consumption).—From this cause 1,033 deaths were registered in 1901, which is equivalent to a death-rate of 14.87 per 10,000 of population. The death-rate for the cities was 17.95. The following is a tabular arrangement of the number of deaths in the State from pulmonary tuberculosis in each of the ten registration years, together with the death-rate from consumption for each year:

	Number of deaths.	Death-rate per 10,000.
1892.....	1,352.....	20.24
1893.....	1,299.....	19.35
1894.....	1,262.....	18.80
1895.....	1,195.....	17.71
1896.....	1,172.....	17.21
1897.....	1,128.....	16.47
1898.....	1,021.....	14.85
1899.....	1,015.....	14.69
1900.....	1,027.....	14.79
1901.....	1,033.....	14.87

There were in 1901, 319 fewer deaths than in 1892, 266 fewer than in 1893, 229 fewer than in 1894, 162 fewer than in 1895, 139 fewer than in 1896, 95 fewer than in 1897, 12 more than in 1898, 18 more than in 1899, and 6 more than in 1900.

Ages: Under 1, 13; 1-5, 15; 5-10, 10; 10-20, 111; 20-30, 315; 30-40, 204; 40-50, 128; 50-60, 82; 60-70, 86; 70-80, 47; 80-90, 13; not stated, 9.

It is thus shown in this report, as it was in the nine preceding reports, that the smallest number of deaths occurred at the age-period 5-10 years, and that, of the decedents whose ages were given, 81 per cent. died at those ages when their deaths entailed the greatest loss to the State.

As to the sex, 461 of the decedents, or 44.6 per cent., were males; and 572, or 55.4 per cent., were females.

The following table shows the number of deaths in each county by months, with the death-rate from consumption in each county:

*Diabetes.*—The deaths from this cause numbered 87 (55 in 1892, 65 in 1893, 71 in 1894, 77 in 1895, 67 in 1896, 95 in 1897, 88 in 1898, 95 in 1899, and 74 in 1900.) The special death-rate from diabetes was, therefore, 1.25 in 1901. Forty-seven of the decedents were males and 40 were females.

Ages: 1-5, 3; 5-10, 2; 10-20, 13; 20-30, 8; 30-40, 6; 40-50, 10; 50-60, 12; 60-70, 20; 70-80, 8; 80-90, 5.

*Old Age.*—There were registered 693 deaths as due to old age, 323 men and 370 women. Of these decedents, 14 were between 60 and 70 years of age; 173 were from 70 to 80; 369 were from 80 to 90; 124 were from 90 to 100, while 6 were over 100 years old; and the ages of 7 were unknown.

From Table No. 33, however, it will be seen that the whole number of persons who died at the ages between 70 and 100 years or more was 3,332 (3,801 in 1892, 3,147 in 1893, 3,242 in 1894, 2,897 in 1895, 3,045 in 1896, 3,232 in 1897, 3,109 in 1898, 3,378 in 1899, and 3,355 in 1900), or one death in every three and one-third was of a person who was between 70 and 100 years of age or older. Assuming that all these 3,332 died of old age, the death-rate from old age would be 47.98 among every 10,000 living at all ages.

The following shows the number of deaths in each county of persons 70 years of age and over, and the number of their deaths in each 10,000 of the population at all ages:
