This report presents the results of the registration and tabulation of the births, marriages, divorces, and deaths which occurred in the State of Maine during the year 1902.

The number of births registered in that year is 555 more than in the preceding year. The number of births recorded in each of the registration years, 1892-1902, is 14,028, 14,604, 14,607, 15,430, 15,429, 15,142, 15,121, 14,475, 14,709, 14,615, and 15,166 respectively.

The number of marriages (number of couples married) in 1902 was 5,905, a number 170 larger than in the preceding year. The number of marriages registered in the State in each of the years 1892-1902 is, respectively, 5,726, 5,795, 5,591, 5,729, 5,579, 5,331, 5,144, 5,329, 5,482, 5,735, and 5,905.

The number of deaths recorded in the State for the same year was 10,673, a number 460 less than that of the deaths registered in the preceding year. The number of deaths in each year thus far recorded is: in 1892, 12,147; in 1893, 11,134; in 1894, 11,012; in 1895, 10,464; in 1896, 10,626; in 1897, 11,236; in 1898, 10,956; in 1899, 11,370; in 1900, 11,389; in 1901, 11,133, and in 1902, 10,673.

Compared with 1901, among the chief causes of death there were in 1902, 45 more from cancer, 23 more from whooping cough, 21 more from diseases of heart, 19 more from bronchitis, 13 more from nephritis and Bright's disease, and 2 more from measles. On the other hand, there was a smaller number of deaths from the following causes: from diarrheal diseases, 241 fewer; from influenza, 144; from tuberculosis in all its forms, 85; from typhoid fever, 62; from peritonitis, 18; from diphtheria and croup, 12; from rheumatism, 8; from pneumonia, 7, and from scarlet fever, 5 fewer deaths than in 1901. The number of deaths from diseases of the nervous system was the same in each year, 1,567.

*Bertillon Classification.*—The nomenclature of the causes of death in this report is the revised Bertillon classification adopted by the International Commission which met in Paris in August, 1900.

Table No. 1 gives a cursory view of the relative mortality in 1901 and 1902 from some of the leading causes of death.

## NOTES ON BIRTHS.

In the year 1902, 15,166 births were registered in the State, including still-births (14,028 in 1892, 14,604 in 1893, 14,607 in 1894, 15,430 in 1895, 15,429 in 1896, 15,142 in 1897, 15,121 in 1898, 14,475 in 1899, 14,709 in 1900, and 14,615 in 1901).

The number of living children born was 14,508, and the number of still-births was 658.

Of the whole number of living children of which the sex was certified, 7,416 were males and 7,063 were females. In 29 births the sex was not stated. For each 100 girls born there were 105.0 boys (106.7 in 1892, 107.4 in 1893, 104.7 in 1894, 106.4 in 1895, 105.3 in 1896, 102.3 in 1897, 106.0 in 1898, 104.4 in 1899, 103.2 in 1900, and 105.6 in 1901).

*Birth-rate.*—The birth-rate of living children for the State was 20.89 for each 1,000 of population.

Table No. 13 shows the number of births in each city with the birth-rate of each. The average birth-rate in the cities per 1,000 population was 21.64 as compared with 20.53, the birth-rate of the rest of the State.

The birth-rate of the different counties varied widely. As it invariably has been every year since the registration began, it was the highest in Aroostook, 35.12, and the lowest in Waldo, 11.66. In six counties, Aroostook, Franklin, Oxford, Piscataquis, Washington, and York, the birth-rate was above that of the whole State. The birth-rate in each county is shown in Tables No. 4 and No. 8.

*Parentage.*—Of the total births in the State, 60.20 per cent. were of native parents; 21.16 per cent. were of foreign parentage; 17.40 per cent. were of parents, one of whom was foreign; while of 1.24 per cent. the nationality was not stated.

Waldo county had the largest percentage of native-born parents, to wit, 92.55 per cent., and only 1.77 per cent. in which both parents were foreign-born. Lincoln followed with 92.18 per cent. of native parentage, and only 0.98 per cent. in which both parents were foreign-born.

In Hancock county, in 88.00 per cent. of the births the parents were native-born, and in 3.00 per cent., foreign-born.

In Knox, the percentage of native-born parents was 82.84; in Somerset, 73.07; in Franklin, 72.12; and in Piscataquis, 71.18.

Low percentages of native-born parents were shown in Androscoggin county, where, in 38.40 per cent. of the births, the parents were native-born, and 44.23 per cent. were foreign-born; in Aroostook, with 55.79 per cent. native-born, and 14.26 foreign-born; in Cumberland, with 52.28 per cent.; in Kennebec, with 54.12 per cent.; and in York county, with 47.31 per cent. of the parents native-born.

The percentages of parentage, whether American-born or foreign-born, may be found for the other counties in Table No. 14.

Comparing the percentage of the births in our twenty cities with that of the rest of the State, we find that, in the cities, 39.79 per cent. of the births were of American parentage, while in the rural parts of the State the percentage of American-born children was 70.53.

The largest percentage of foreign-born parents was in Biddeford, 66.54; and in Lewiston, 65.45.

In Ellsworth only 4.29 per cent. of the births had both parents foreign-born, and in Belfast only 6.38 per cent. For further comparison see Table No. 15.

*Seasons and Births.*—The largest number of births in any one month in 1902 was 1,401 in March; the smallest was 1,064 in November; the largest quarterly total was 3,827 in the second quarter; the smallest, 3,320 in the last quarter. The three consecutive months in which the largest number of births occurred were March, April, and May, 3,984.

The following is a tabular statement of the number of births in each month of the eleven years 1892-1902:

## NOTES ON MARRIAGES.

The number of marriages registered in the State during the year 1902 was 5,905 (5,726 in 1892, 5,795 in 1893, 5,594 in 1894, 5,729 in 1895, 5,579 in 1896, 5,331 in 1897, 5,144 in 1898, 5,329 in 1899, 5,482 in 1900, and 5,735 in 1901). We have, therefore, for the year 1902, a marriage-rate 17.00 (persons married) to every 1,000 of population, or at the rate of 8.50 marriages per 1,000 persons.

*Marriage-rates.*—The marriage-rate was higher in Oxford county than elsewhere in the State, it being for that county 19.79 per 1,000. The lowest marriage-rate, that of 13.31 per 1,000, was in Waldo county. See Table No. 4.

*Nativity.*—Of the 5,851 records of marriage in which there was a statement of birthplace, in 73 per cent. the groom and bride were both American; in 11 per cent. both were of foreign birth; in 7 per cent. the groom was American and the bride of foreign birth; while in 9 per cent. a foreign groom and American bride were united.

*Seasons.*—The largest number of marriages, 707, was solemnized in June, while the smallest number in any one month, 309, occurred in March. See Table No. 22.

*Ages of the Married.*—The largest number, both of grooms and brides, was between 20 and 25 years of age. While still under 15 years of age, 13 brides were married; in the age-period 15-20 years there were 197 grooms and 1,578 brides; in the period 20-25 years, 2,134 men and 2,200 women were married; from 25-30, 1,676 men and 1,031 women; from 30-35, 778 men and 425 women; from 35-40, 396 men and 232 women; from 40-45, 223 men and 158 women; from 45-50, 164 men and 118 women; from 50-55, 130 men and 63 women; from 55-60, 81 men and 28 women; from 60-70, 89 men and 42 women; from 70-80, 26 men and 5 women. The age of 11 men and 12 women was not stated. See Table No. 24.

In 5,004 marriages, the groom was older than the bride; while in 901, the bride was the elder; 794 widowers and 568 widows were remarried; 243 men and 296 women were remarried after having been divorced from a former marriage.

Table No. 25 exhibits the fact that 4,850 men and 5,021 women were married the first time; that 926 men and 782 women were married the second time; that 94 men and 67 women were united in the third marriage; that 12 men and 10 women contracted marriage a fourth time, and 3 men and 2 women were married a fifth time. The oldest groom was 77 years of age, and the oldest bride was 73. In eight marriages the bride was but 14 years of age.

## NOTES ON DIVORCES.

Nine hundred and five divorces were decreed in the year 1902 (552 in 1892, 627 in 1893, 674 in 1894, 681 in 1895, 668 in 1896, 722 in 1897, 764 in 1898, 790 in 1899, 801 in 1900, and 808 in 1901). In 1902, there was decreed in Maine one divorce for every 6.5 marriages solemnized.

Some of the causes for which divorces were granted are: Adultery, 120, or 13.2 per cent. of the whole number; extreme cruelty, 14, or 1.5 per cent.; desertion, 213, or 22.4 per cent.; intoxication, 104, or 11.5 per cent.; cruel and abusive treatment, 331, or 36.5 per cent.; failure to support, 28, or 2.9 per cent. The other divorces were granted for multiple or associated causes.

The wife was the libellant in 652 divorces, and the husband in 253.

In the divorces granted for adultery, the husband was the libellant 80 times, and the wife 40 times.

On account of extreme cruelty, the wife was the libellant in all 14 cases.

For desertion, the husband was the libellant 84 times, and the wife, 129.

For intoxication, the husband was the libellant in 11 cases, and the wife in 93.

For cruel and abusive treatment, the husband was the libellant in 64 instances, and the wife in 267.

For failure to support, the wife was the libellant in the 28 divorces decreed for that cause.

Six divorces were granted before the marriage life had lasted six months; 55, after 1 year's marriage; 249 after from 1 to 5 years marriage; 254, after 5 to 10 years; 239, after 10 to 20 years; 77, after 20 to 30 years; 22, after more than 30 years of married life; while in 3 cases it was not stated how many years they had been married. Tables No. 26 and No. 27 may be consulted for more detailed statements.

The death-rate for the State for the year 1902 was 15.37 for every 1,000 of population (18.37 in 1892, 16.84 in 1893, 16.66 in 1894, 15.83 in 1895, 16.07 in 1896, 16.99 in 1897, 16.57 in 1898, 16.45 in 1899, 16.40 in 1900, and 16.03 in 1901).

By referring to Table No. 4, it will be seen that the death-rate of Aroostook county was lower than that of any other county, being only 12.37. The counties Androscoggin, Aroostook, Franklin, Hancock, Knox, Lincoln, Piscataquis, Sagadahoc, Waldo, and Washington had lower death-rates than that of the whole State; while the counties Cumberland, Kennebec, Oxford, Penobscot, Somerset, and York had death-rates larger than that of the State. The highest county death-rate was that of York, 18.74.

The death-rate in the cities was 17.03 (20.46 in 1892, 19.89 in 1893, 19.65 in 1894, 18.36 in 1895, 18.78 in 1896, 20.11 in 1897, 19.74 in 1898, 18.10 in 1899, 18.34 in 1900, and 17.90 in 1901) as compared with that of the rest of the State with the cities omitted, which death-rate was 14.58 (17.46 in 1892, 15.54 in 1893, 15.39 in 1894, 14.77 in 1895, 14.93 in 1896, 15.68 in 1897, 15.24 in 1898, 15.52 in 1899, 15.47 in 1900, and 15.13 in 1901).

*Seasons and Mortality.*—The largest number of deaths occurred in December, 998. The smallest number of deaths in any one month was 805 in June. During the spring months 2,787 deaths occurred; during the summer, 2,503; during the autumn, 2,585; in the winter, 2,774. The following shows the month in which the largest and smallest number of deaths occurred in the years 1892-1902.

Table No. 29 exhibits the total number of deaths which occurred in each month of the years 1895-1902. The number of deaths for 1902 in each month by counties is shown in Table No. 33.

*Sex and Mortality.*—Of the 10,673 decedents 5,454 were males and 5,216 were females. The sex of three was unstated.

Among children dying before they were 5 years old, 1,104 were males and 906 were females; there were 188 more deaths among boys under 5 years of age than among girls within the same age-period. On the contrary, at the age-periods from 10

to 50 years there was a preponderance of deaths among females, while there were more deaths among males at the ages from 50 to 90. At the age of 100 years and over, 7 persons died, 4 women and 3 men. See Table No. 33.

*Age and Mortality.*—The following shows the number of deaths which occurred within each age-period, and the relation which the percentage in each period bears to the whole number of deaths:

Under 1	year of age	1,433	13.43 per cent.
From 1-5	years of age	590	5.53 per cent.
From 5-10	years of age	207	1.94 per cent.

Over 100	years of age	7	0.07 per cent.
Ages not stated		62	0.58 per cent.

*The Causes of Death.*—The following table shows the mortality from ten prominent causes in the eight years 1895-1902. The various diseases of the brain have occupied the first place among the causes of death, and consumption was the next most prominent cause until 1898 when it was reduced to the third place in the list; in 1899 and 1900 it occupied the fourth place; in 1901, the third place, and this year it goes back to the fourth place. Diseases of the heart have the second place, and pneumonia has the third place.

By referring to Table No. 30 it will be noticed that the causes of death are arranged by counties under fourteen classes. The following notes on some of the classes and individual causes of death will be arranged in accordance with the classification shown in this Table No. 30.

*Infectious Diseases.*—The lists of the infectious diseases usually include smallpox, measles, scarlet fever, typhoid fever, whooping cough, diphtheria and croup. The following table shows the number of deaths which resulted from these diseases in the several counties of the State:

By consulting the following table it will be seen that the number of deaths from whooping cough, malarial diseases, smallpox, tetanus, and measles was larger than in 1901. There was a less number of deaths from influenza, typhoid fever, diphtheria, cerebro-spinal meningitis, and scarlet fever.

*Smallpox.*—From the time when the registration act went into effect in 1892, there were no deaths from smallpox until 1899. In that year, 3 deaths from this disease occurred, and in 1900, 2. In this year, 1902, the prevalence of smallpox has been wide-spread all over the country, and in this State, 12 deaths occurred from that cause. That fact is deplorable, particularly in view of the fact that entirely trustworthy protection against smallpox is available to any person through vaccination.

*Measles.*—This disease caused the death of 28 persons, of whom 12 were males, and 16 were females. The deaths from measles were 29 in 1892, 55 in 1893, 21 in 1894, 8 in 1895, 32 in 1896, 22 in 1897, 41 in 1898, 39 in 1899, 84 in 1900, and 26 in 1901.

*Scarlet Fever.*—The total mortality from this disease was 13 (36 in 1892, 80 in 1893, 29 in 1894, 25 in 1895, 33 in 1896, 38 in 1897, 43 in 1898, 48 in 1899, 35 in 1900, and 18 in 1901), 5 males and 8 females. The largest number of deaths occurred at the age-period 1-5. The largest monthly number of deaths from this cause was 3 in April. There were 4 deaths in the first quarter, 5 in the second, 3 in the third, and 1 in the last three months of the year.

Aroostook and Penobscot counties had 3 deaths each from scarlet fever; Androscoggin, Kennebec, Knox, Piscataquis, Waldo, Washington, and York had 1 each. In seven counties no deaths occurred. Of the 13 deaths from this cause, only 1 was in a city.

The following is the exhibit of the scarlet fever deaths arranged by counties, months, and age-periods for the ten years 1893-1902:

The scarlatinal death-rate per 10,000 for this State was 0.19; for the cities, 0.04.

*Grippe.*—During the year for which this report is made, 122 deaths were attributed to grippe. By months the percentage distribution of deaths from this cause was as follows: January, 7.37; February, 11.48; March, 18.02; April, 15.57; May, 9.84; June, 5.74; July, 4.10; August, 0.82; September, 10.66; October, 4.92; November, 3.28; December, 8.20. The number of deaths in the cities was 13. Thirty of the 51 deaths from this cause were among infants under 1 year of age.

The death-rate in the State from whooping cough was 0.73 per 10,000; that of the cities, 0.58.

Thirteen of these deaths were in the cities. Deaths from this cause occurred in every month. Distributed by quarters, they were 5, 7, 13, 8. The death-rate from this disease was 0.48.

The distribution of deaths from cerebro-spinal meningitis by counties, months, and age-periods is shown in the following:

*Typhoid Fever.*—There were 162 deaths from typhoid fever. Of these, 96 were males and 66 were females. As indicative of the loss which the State incurs from typhoid fever, it is well to bear in mind that the age distribution of the decedents shows that the deaths from this disease are principally among those active and productive age-periods when human life is of the most value; 83 per cent. died between 10 and 50 years of age.

Ages: 1-5, 3; 5-10, 11; 10-20, 37; 20-30, 53; 30-40, 24; 40-50, 20; 50-60, 9; 60-70, 3; 70-80, 1; not stated, 1.

The largest number of deaths, 18, occurred in September and December, and the smallest number, 9, in June. By quarters, 38 were in the first quarter, 34 in the second, 45 in the third, and 45 in the last quarter of the year.

The typhoid death-rate of 3.16 in the cities is considerably greater than that in the villages and rural towns, which is 1.94. The rate for the State is 2.33.

The following exhibits the number of deaths from typhoid fever in each county by months, with death-rate in each county:

*Malarial Diseases.*—Twenty deaths were registered as due to malarial diseases. In seven cases the disease was contracted outside of this State; six of the persons having contracted the disease in the war of the rebellion. All of the decedents except one were males; their respective ages were: 20-30, 2; 30-40, 1; 40-50, 1; 50-60, 3; 60-70, 7; 70-80, 4; 80-90, 2.

*Tuberculosis.*—In 1902, tuberculosis in its various forms was the cause of 1,165 deaths (1,513 in 1892, 1,446 in 1893, 1,449 in 1894, 1,397 in 1895, 1,359 in 1896, 1,338 in 1897, 1,239 in 1898, 1,241 in 1899, 1,215 in 1900, and 1,250 in 1901). The death-rate per 10,000 from this cause was 16.78.

*Cerebral Tuberculosis.* (Tubercular Meningitis.)—The number of deaths was 59; 32 were of males and 27 of females.

The number for the cities was 28. The death-rate for the State was 0.85; for the cities, 1.24.

Ages: Under 1, 10; 1-5, 23; 5-10, 4; 10-20, 11; 20-30, 5; 30-40, 3; over 60, 1; not stated, 2.

*Pulmonary Tuberculosis.* (Consumption.)—From this cause 970 deaths were registered in 1902, which is equivalent to a death-rate of 13.97 per 10,000 of population. The death-rate for the cities was 15.29. The following is a tabular arrangement of the number of deaths in the State from pulmonary tuberculosis in each of the eleven registration years, together with the death-rate from consumption for each year:

	Number of deaths.	Death-rate per 10,000.
1892.....	1,352.....	20.24
1893.....	1,299.....	19.35
1894.....	1,262.....	18.80
1895.....	1,195.....	17.71
1896.....	1,172.....	17.21
1897.....	1,128.....	16.47
1898.....	1,021.....	14.85
1899.....	1,015.....	14.69
1900.....	1,027.....	14.79
1901.....	1,033.....	14.87
1902.....	970.....	13.97

There were in 1902, 382 fewer deaths than in 1892, 329 fewer than in 1893, 292 fewer than in 1894, 225 fewer than in 1895, 202 fewer than in 1896, 158 fewer than in 1897, 51 fewer than in 1898, 45 fewer than in 1899, 57 fewer than in 1900, and 63 fewer than in 1901.

Ages: Under 1, 8; 1-5, 14; 5-10, 6; 10-20, 121; 20-30, 283; 30-40, 168; 40-50, 111; 50-60, 95; 60-70, 86; 70-80, 64; over 80, 12; not stated, 2.

It is thus shown in this report, as it was in the ten preceding reports, that the smallest number of deaths occurred at the age-period 5-10 years, and that, of the decedents whose ages were given, 70 per cent. died at those ages when their deaths entailed the greatest loss to the State.

As to the sex, 432 of the decedents, or 44.5 per cent., were males; and 538, or 55.5 per cent., were females.

The following table shows the number of deaths in each county by months, with the death-rate from consumption in each county:

*Diabetes.*—The deaths from this cause numbered 83 (55 in 1892, 65 in 1893, 71 in 1894, 77 in 1895, 67 in 1896, 95 in 1897, 88 in 1898, 95 in 1899, 74 in 1900, and 87 in 1901). The special death-rate from diabetes was, therefore, 1.19 in 1902. Thirty-seven of the decedents were males and 46 were females.

Ages: 1-5, 1; 5-10, 1; 10-20, 5; 20-30, 4; 30-40, 8; 40-50, 6; 50-60, 12; 60-70, 23; 70-80, 15; 80-90, 8.

*Old Age.*—There were registered 708 deaths as due to old age, 315 men and 393 women. Of these decedents, 5 were between 60 and 70 years of age; 170 were from 70 to 80; 391 were from 80 to 90; 133 were from 90 to 100, while 6 were over 100 years old; and the ages of 3 were unknown.

From Table No. 33, however, it will be seen that the whole number of persons who died at the ages between 70 and 100 years or more was 3,289 (3,801 in 1892, 3,147 in 1893, 3,242 in 1894, 2,897 in 1895, 3,045 in 1896, 3,232 in 1897, 3,109 in 1898, 3,378 in 1899, 3,355 in 1900, and 3,332 in 1901), or one death in every three and one-fourth was of a person who was between 70 and 100 years of age or older. Assuming that all these 3,289 died of old age, the death-rate from old age would be 47.36 among every 10,000 living at all ages.

The following shows the number of deaths in each county of persons 70 years of age and over, and the number of their deaths in each 10,000 of the population at all ages :
