STATE OF MAINE.

OFFICE OF COMMISSIONER OF HIGHWAYS,
AUGUSTA, January 1, 1908.

To His Excellency, William T. Cobb, Governor, and the Honorable Council:

I have the honor to present the third annual report of the Commissioner of Highways.

Very respectfully,

PAUL D. SARGENT,
Commissioner.

REPORT.

During the first three months of 1907 the time of the commissioner was almost wholly occupied in explaining to members of the Legislature and others the provisions of the bill which was offered in the last report as a basis for a new state road law.

Immediately after adjournment of the Legislature requests began to come in from municipal officers for advice concerning the construction of state roads. Beginning in the middle of April and continuing until the last of November with the exception of two weeks in May and two weeks in June when county road meetings were held, from four to five days each week were spent by the commissioner in visiting towns and in looking after road and bridge work for which the Legislature made special appropriations.

Besides the regular office work a large amount of time has been devoted to carrying on the investigation of the bridges of the State which was ordered by the last Legislature. The result of this investigation will be found in this report.

NEW STATE ROAD LAW.

In the last report a bill was offered as a basis for new state road law. Two well attended committee hearings were held on the bill. The time of the first hearing was devoted to hearing the proponents of the bill. Appearing in behalf of it were a committee of the State Board of Trade, a committee of the State Grange and a committee of the County Commissioners' Association of the State. There were also presented to the Legislature and referred to the committee 453 petitions carrying 13,947 names representing cities, towns and subordinate granges throughout the State asking for the passage of the bill.

At the second hearing the opponents appeared. These included representatives of four cities and one town.

After being considered at several executive sessions of the committee the bill finally was reported to the Legislature and unanimously passed as a law in the form in which it appears in this report.

The law includes in general all the provisions of the bill. The only part that was materially changed was cutting down the amount of the appropriation and the consequent reduction in the amount of joint fund for the several cities and towns. The amount of aid granted to towns with a valuation in excess of \$1,000,000 was also increased from 50 per cent to 75 per cent of the amounts furnished by those towns.

Explanation of the Law.

We apprehend that most people would rather be told in a few words what any law means or how it works than to try to find out for themselves by perusing the same. We realize that it is the function of the court to say what any law means so that proposition will not be touched upon at this time; we will attempt to explain some of the provisions of the new law and procedure under the same.

Section two provides that the main thoroughfare of each town which votes to build state road shall be designated as state road. Also that a majority of the voters in any town or of the municipal officers in any city may petition for a change in the location of the state road if they are satisfied the road as designated "is not the main traveled thoroughfare in that town."

This section also provides that a second state road may be laid out in any town after completion of the first state road.

Section three creates the State Highway Department and provides for a state highway commissioner, an assistant commissioner, one clerk and one stenographer.

Sections four, five and six cover the financial part of the law.

Section four declares that each town must set aside from its regular appropriation for highways a certain amount of money to be used in making permanent improvements on its highways, and names the amounts which towns must so set apart. The provisions of this section also extend to unincorporated townships. The idea meant to be conveyed in this section is that

the amount set aside under it may be used for the permanent improvement of some leading line of highway in the town but not necessarily the state road. This section works automatically.

If, however, the town desires to draw state aid it must according to section five, make a special appropriation equal to fifty per cent of the amount necessary to be set aside under section four. This special appropriation shall be made in addition to the amount regularly raised for the maintenance of highways. The section also provides that application for state aid must be made to the state highway department prior to April fifteenth or the town will forfeit its right to state aid that year.

Section six names the amount of state aid that shall be apportioned to the different classes of towns according to their valuation.

Section seven declares that the three sums—that set aside under section four, the special appropriation made under section five and the state aid apportioned under section six shall together constitute a joint fund for the permanent improvement of the state road—also that towns shall file prior to May fifteenth a proposal showing the location and nature of work which they desire to do.

Towns which do not apply for state aid shall file a similar proposal prior to June first showing where and how they propose to expend the money set aside under section four. Such towns may also have the services of any engineer in the employ of the State for consultation and advice concerning the improvement of their highways.

Towns which make improvement under section four must file statement of improvements made by November first.

Section eight provides for doing work costing one thousand dollars or more by contract and tells what provisions shall apply to such work; also gives towns right to bid on work located within their borders.

The section also provides that towns in which less than one thousand dollars is expended may have the services of an engineer for survey and superintendence of the work.

Section ten describes the manner of making payment of the State's share of the joint fund; also the manner of paying for contract work.

Section thirteen provides for the building of connecting links of road between the state roads laid out by the county commissioners; the idea being that eventually a complete system of continuous main thoroughfares may be realized.

The other sections of the law are taken up with details and further prescribe the duties of the commissioner.

There will probably be discovered in the course of operation of the law points which will need to be amended and changed and these points can only be discovered by trying the law.

It is planned to handle the work as far as possible on uniform blanks which will be supplied by the department.

The attention of municipal officers is called to the fact that the law requires certain returns to be made to the department on or before certain dates and it is hoped that town officers will bear in mind that the work of the department which of necessity will be heavy will be materially lightened and expedited if these returns are forwarded promptly on the dates specified.

The following schedule of duties of selectmen with regard to the law may serve as a helpful reminder:

In all towns.

Insert the following or similar articles in town warrant:

(Last paragraph, sec. 5.)

“Article . . . To see if the town will vote ‘yes’ or ‘no’ upon the adoption of the provisions of Chapter 112 of the Public Laws of Maine, for the year 1907 relating to the appropriation of money necessary to entitle the town to state aid for highways for the year 1908.”

“Article . . . To see if the town will raise, appropriate and set apart, for the permanent improvement of the main highways within the town, such sum of money as is contemplated and directed by Section 5 of Chapter 112 of the Public Laws of Maine for the year 1907, being the sum of \$”

A. *In towns voting to apply for state aid.*

1. Make application for state aid before April 15. (Time extended to June 15 for cities.)

(Sec. 5.)

2. File proposal giving location and kind of work before May 15. (Time extended to July 15 for cities.)

(Sec. 7.)

3. File certificate of cost of road before Nov. 1.
(Last paragraph, sec. 8.)

B. *Towns not voting to apply for state aid.*

1. File proposal giving location and kind of work to be done with money set aside under section four, before June 1.
(Time extended to July 15 for cities.)

(Second paragraph, sec. 7.)

2. File certificate of cost of road before Nov. 1.
(Last sentence, second paragraph, sec. 7.)

The full text of the law together with a financial statement showing its application to every town will be found in this report.

FIELD WORK.

During the last two weeks of May and the first two weeks of June, seventeen county road meetings were held—two in Aroostook county and one in each of the other counties. There was a fair attendance at these meetings and a good degree of interest was manifested by those present. In nearly every meeting the same line of questions was presented for discussion as in the meetings of the year previous. This is due largely to the fact that many towns follow the practice of changing road commissioners frequently, an evil which has been discussed in an earlier report.

An attempt was made to hold these meetings at such time and place in each county as would give opportunity for viewing some first-class job of road work under construction. Arrangements looking to this end could not seem to be perfected. At Belfast, however, Commissioner Bennett had a section of his state road work under way and the delegates to the meeting adjourned to the scene of the work and made an inspection of it. The work consisted of building a stone underdrain on a clay hill and surfacing the hill with gravel. A section of the underdrainage work was being done on the day of the meeting and it gave all an opportunity to see how this work should be done properly. The commissioner believes that actual demonstrations of practical road work would be a valuable adjunct to each of these meetings.

Besides the towns in which county meetings were held the following have been visited officially: Kennebunk, Old Orchard, Sanford, South Berwick, Saco, Brunswick, Harpswell, Norway, Fayette, East Livermore, Monmouth, St. George, Thomaston, Manchester, Pittston, Washington, Oakland, Bingham, Madison, Anson, Norridgewock, Mercer, Concord, Old Town, Hampden, Glenburn, Macwahoc, Presque Isle, Foxcroft, Bel-

fast, Detroit, Monson, Oakfield, Fort Kent, St. Francis Plt., Rangeley, Van Buren, Fort Fairfield, Whitneyville, Machias, East Machias, Calais, Baileyville, Baring, Eastport, Jackman, Charlotte, Windsor, China, Albion, Winslow, Benton, Clinton, Vassalboro, Readfield, Vienna, Mt. Vernon, Belgrade.

In most of these towns state road construction occupied the attention of the commissioner. In some, however, advice was given in relation to bridge work as well as to road work, and in some the work attended to was the result of special appropriations by the Legislature. Several of these towns were visited two or more times.

STATE ROAD WORK IN 1907.

The year 1907 was a red letter year for state road work in Maine. It was the first year in which claims for state aid exceeded the State's appropriation. Three hundred and twenty-nine towns have filed claims, which will probably be allowed, aggregating in round numbers \$73,500 while the appropriation to meet these claims is but \$70,000. Seventy-nine miles of road have been reconstructed at a cost of \$169,900, making the average cost per mile a little rising \$2,150. As this is \$300 per mile more than the average cost of the work done in 1906 and the cost that year averaged \$230 per mile more than for the year previous we feel that our efforts during the last two years in trying to raise the standard of state road work have not been without avail.

Included in this seventy-nine miles of work we find there were 5.23 miles of road surfaced with macadam varying in width from 12 to 43 feet and in thickness from 5 to 8 inches and that the average cost per mile for all classes of this work was \$5,828. The average cost per square yard was 40 cents.

About 60 miles were surfaced with gravel, a large part of this work having been underdrained with "V" stone drain, varying from 8 to 12 feet wide and from 18 inches to 24 inches deep. Gravel was spread not less than 12 feet wide and six inches deep and in many cases the width and depth were considerably increased.

About 13 miles were underdrained, graded and surfaced with the material at hand, no gravel or crushed stone being available.

Madison built 3,185 feet of sand-clay road 16 feet wide at a

cost of \$589.24. Kennebunk built 300 feet of asphalt macadam 30 feet wide at a cost of \$967.46. In a few towns the money was expended for bridge work.

In addition to above claims, Bingham, Bucksport and Randolph constructed state roads but their claims were disallowed as each town had received special aid from the Legislature on account of its highways or bridges.

There were also twenty-five towns which made appropriations for state road work but which for various reasons—principally on account of lack of labor—did not do any work. Consequently it may be said that there were 357 towns in the State interested in state road work in 1907.

WORK UNDER SPECIAL RESOLVES.

Herewith is given a summary of road and bridge work performed under special resolves of the Legislature in which the commissioner has been interested.

St. Francis Plantation: Appropriation of \$800 to repair washout in highway on bank of St. John river. Money to be expended under supervision of state highway commissioner. Examined site with assessors of plantation and a large delegation of citizens on July sixteenth and recommended that location of road be changed and new section of road built instead of attempting to build a retaining wall or crib work to support the highway and keep back the St. John river which if properly done would have cost from \$5,000 to \$8,000. A road was laid out on the new location by the plantation assessors, accepted by the voters and constructed by the road commissioner of the plantation according to instructions from this office. Road examined and accepted October 31 and payment of \$800 made to treasurer of plantation at December meeting of Governor and Council.

Survey of St. John river at Van Buren for International Bridge: Appropriation \$400. On a trip through Aroostook county in July a call was made with Senator Therriault on Hon. John B. Costigan of Edmundston, N. B., Canadian senator, to ascertain his views as to whether it would be possible to secure the co-operation of the Canadian government in making this survey. We were unable to see Mr. Costigan owing to his absence from town on the day of the call. A letter of inquiry

and a certified copy of the resolve of the Legislature was later forwarded to Mr. Costigan and as yet no reply has been received.

In October another attempt was made to see him but only to learn that he had left the day before for Ottawa. Nothing has yet been done on the survey.

Bridge between Machiasport and East Machias: Appropriation \$8,000, to be expended by board of trustees appointed by Governor.

Met and advised with board of trustees about six times. Furnished general plans for work and schedules of material. Also selected steel draw span from competitive bids and made final inspection of work passing especially upon the draw which was furnished by the American Bridge Company on contract. The remainder of the work was performed by day labor.

The work consisted in virtually rebuilding an old pile trestle with a draw in it. All of the work in the channel of the river, that is, between banks at low water was put in new, making about 350 feet of new work. The shore approaches, about 300 feet more, were built as far as possible upon the old piling, new piles being driven wherever necessary. The old draw consisted of one channel 43 feet wide over which was a double lift wooden bridge. The new draw provides two channels 45 feet each, spanned by a swinging steel bridge.

The work cost complete upwards of \$9,500.

Old Town and Milford Bridges: By chapter 402 of Private and Special Laws, 1907, the State assumed the care of these two bridges. On June 28 the state commissioner with the Penobscot county commissioners made an inspection of these bridges. They were found to be in a very poor state of repair. Temporary repairs have been made as the bridges do not appear to be worth repairing permanently.

No appropriation was made for this work and the commissioners of Penobscot county whom the law directs to make the repairs have met the bills and will ask the next Legislature to reimburse the county.

Visits were also made to this bridge July 10 and October 26.

Bridge at Oakfield: Appropriation \$750 provided town expends equal amount. To be expended under supervision of Aroostook county commissioners and state highway commis-

sioner. This job was visited in April and again in July. Nothing done as yet on the construction of the bridge. Town has voted to relocate the bridge in order to obtain a right angle crossing of the stream as recommended by this office.

Whitneyville: Appropriation \$500 to repair bridge across Machias river. Plans were prepared for a concrete abutment at the suggestion of the selectmen. A very poor wooden abutment was built.

Macwahoc: Appropriation of \$1,250 for repairing bridge across Molunkus stream and the bridge across Macwahoc stream to be expended under direction of state commissioner of highways and the county commissioners of Aroostook county.

Both of these bridges were examined on June 15. Specifications for the repairs to each bridge were drawn in this office and forwarded to the Aroostook county commissioners who attended to letting the contracts and supervising the work. The contract for repairs to the Molunkus bridge was let to Seward Waster for \$275 and during the progress of the work the Aroostook commissioners ordered extra labor and material to the amount of \$85.00 making the total for repairs to this bridge \$360.

The contract for the Macwahoc bridge was let to Frank P. Kimball for \$650. This work consists of rebuilding abutments and on account of high water all through the season of 1907 it has not been done. The work will be done, however, in the season of 1908.

Road from Roach River to Grant Farm: Appropriation of \$1,250, to be expended by agent appointed by the Governor and Council.

During the last week in June at the request of L. E. Moore of Sebec, agent, the commissioner made a trip over this road with Mr. Moore advising in relation to the repairs.

The total appropriation was expended on this work together with a similar amount furnished by the Great Northern Paper Company.

Road leading from Northwest Carry on Moosehead Lake to Pittston Farm: Appropriation \$750 to be expended under direction of an agent appointed by the Governor and Council.

During the first week in July upon request of H. L. Colby of Jackman, agent, a trip was made over this road for the purpose of advising as to repairs. No work was done, however,

on account of the scarcity of labor during the season and the appropriation has been carried over for expenditure in 1908.

Town of Concord: Appropriation of \$564.03 to aid in building and repairing highway leading to Bingham and Concord bridge to be expended under the direction of commissioners of Somerset county.

This work was inspected the latter part of September after its completion. A large amount of drainage work and ledge excavation was done, the material excavated being used to fill a low portion of the road. A much needed improvement was made in the approach to the bridge. The full amount of the appropriation was expended.

Road at Bingham: Appropriation same as for Concord and expended in a similar way; total of \$382.53 expended to date.

Bridge in town of Rangeley: In addition to above work the commissioner has aided a committee of the town of Rangeley in selecting and buying a bridge which has been erected over the outlet of Rangeley lake. During the month of August a visit was made to the site and plans and specifications for concrete abutments were prepared which the committee followed in carrying out the work. The completed job was inspected for the town of Rangeley January 7, 1908.

CONVENTIONS.

County Commissioners' Convention at Belfast, August 14: The commissioner attended this convention and as in the past two years advised with the county commissioners relative to state road work for 1907 and also reviewed the new law and its course through the Legislature.

A similar report was made on the general bridge bill which was before the last Legislature.

Convention of American Road Makers: The commissioner made preparations and plans to attend the fourth annual convention of the American Road Makers held at Pittsburg, March twelfth and thirteenth, but as the new state road bill was just emerging from committee at the same time he did not deem it advisable to be absent. This association is composed of all state highway commissioners and others interested in the question of road improvement.

Good Roads Convention in Springfield, Massachusetts, September twenty-fourth and twenty-fifth: The commissioner attended this convention which was held under the auspices of the Springfield Automobile Club. The motto of the meeting was "Good Roads and the Sane Use of Them."

Representatives of the state highway departments of Rhode Island, Connecticut, Massachusetts and Pennsylvania were in attendance at this meeting as well as delegates from several other states. The sessions were most interesting and instructive. Your commissioner gave a short address on state road work in Maine.

As indicative of the status of highway improvement in the states above named it may be said that a large part of the discussion of the meeting was devoted to considering the best methods of preserving macadam roads and laying the dust on the same; in other words the building of macadam roads is the established policy in those states and the proper maintenance and preservation of those roads is the question that is now being agitated.

We were interested to hear a representative of the Metropolitan Park Commission say that the split log drag was used in maintaining certain sections of the system which were surfaced with gravel.

SYSTEMATIC MAINTENANCE OF HIGHWAYS.

The following paper was prepared under the title of "The First Thing to be done to secure an Improvement in the Highways in the Rural Districts" and read at a meeting of the Central Maine Fair Association at Waterville, November 30, 1907.

It is an elaboration of the ideas we had in mind when discussing the question of road maintenance on pages 18, 19 and 20 of the first report of this office.

It is reproduced in the hope that some of the suggestions therein contained may be found practicable in some towns.

There is no need today of discussing the desirability of good roads. Their economic value is well established and is well known by people who have given the matter the most casual attention.

The government through the Department of Agriculture has several times collected statistics from all parts of the country to learn just what it was costing to transport farm products from the farm to the shipping point over unimproved roads. A careful compilation of the information obtained shows us that the average cost over ordinary country roads is twenty-five cents per ton per mile. This would be equivalent to a team costing four dollars per day hauling 1,600 pounds twenty miles in a day and I think is not far from what teams can do on an average in this State taking all seasons of the year into consideration. At least I know this is about what teams "toting" supplies into the woods in my part of the State can handle and we pride ourselves on having as good roads in Washington County as there are in the State.

It has been learned at the same time that over improved roads the cost is from one-fourth to one-third as much or an average

of about seven cents per ton mile. Indeed in a recent report to the Government from Consul General R. P. Skinner of Marseille the statement is made that the standard road of France is such that one good draft horse can travel 18.6 miles per day hauling a load of 3,300 pounds, and that public opinion demands that all roads be kept up to this standard. If we assume that two good horses will haul just twice as much or 6,600 pounds the same distance and that the daily cost for such a team is four dollars the cost per ton mile figures out just six and one-half cents or practically one-fourth of the cost over unimproved roads. This means either that all of the work done under present conditions by our horses could be done by one-fourth as many horses or that under better conditions all our horses could do four times the work they are now doing. This certainly ought to interest an association like your own which has for one of its objects the development of horses which can haul larger loads as well as those which can make faster time. Wouldn't it be well to inquire whether the horses are having a fair chance to show what they can do? The most of us would condemn any railroad manager for buying powerful locomotives and operating them upon track so poor that their full efficiency could not be realized.

Do not think for a moment that the advent of conditions under which one horse could perform the work of four would lessen the demand for horses. Better transportation facilities always bring about an increase of travel and I am sure that improved highways would increase rather than diminish ordinary wagon travel.

Granting then that improved roads are highly desirable the all important question is, How can they be realized? Or to confine ourselves more closely to the topic assigned for discussion let us consider "The first thing to be done to secure an Improvement in the Highways in the Rural Districts."

In order to discuss this question intelligently it would seem fair and proper to first consider the present conditions under which highway work in the rural towns is carried on.

In 1905 inquiry was made from each town in the State as to the mileage and condition of its roads and the amount of money annually appropriated for the maintenance of the same. We learned that for the whole State there were 25,530 miles of road

of which 2,238 miles were surfaced with gravel, 22 miles with granite block pavement and 65 miles with macadam; the remaining mileage being ordinary dirt road. In other words only 9 per cent of the roads in the State have been improved as to surface and 91 per cent are still surfaced with the natural earth of which they are constructed.

By a process of segregation we have also learned that 7.6 per cent of the total road mileage of the State was found within the twenty cities and 92.4 per cent outside the cities. I do not mean for you to infer that all the improved roads were found within the cities and all the unimproved roads outside of them but it is true that a larger percentage of improved roads is found in the cities than in the country. The reason for this is found in what I am about to say.

In 1904 the total highway expenditures of the State amounted to \$1,377,196 or an average for the State of \$54.00 per mile of road. Of this amount \$490,526 was expended in the twenty cities allowing them an average expenditure per mile of \$254 while the balance of \$886,670 was expended outside the cities or an average expenditure of \$37.58 per mile. Deduct from this figure \$9.56, the average cost per mile for handling snow, outside the twenty cities, and we have the magnificent sum of \$28.02 per mile for maintaining our highways and making permanent improvements upon them. It should be borne in mind that these figures are not those for the rural districts alone; they include all towns, many of which like Bar Harbor, Lisbon, Brunswick, Farmington and Skowhegan ought properly to be classed with the cities as far as highway expenditures go. Taking out these large and wealthy towns would certainly reduce the available funds for highway maintenance and improvement to an average annual expenditure of not over \$20.00 per mile.

Our state road work the last six years has averaged to cost \$1,553 per mile and I think no one familiar with this work will charge that it is any too good or that the work has been done at an excessive cost. Under present conditions, then, in the smaller towns, with an average annual expenditure, say of \$20.00 per mile, it is clearly apparent that the first thing to be done in order to secure highway improvement is to make every dollar of this highway expenditure go as far as possible.

Let us suppose for a few minutes that we were asked to formulate a policy for managing a maintenance of way department to care for all the railroads in this State with the understanding that the expenditure per mile of track should not exceed a certain amount. It seems to me under such circumstances my instructions to road masters and section foremen would be something like the following:

Until further notice this department is obliged to practice rigid economy and you will therefore immediately reduce forces to the lowest number consistent with safety. Your aim must be to keep each and every mile of track in a safe condition with as little expense as possible. Do only such surfacing work as is necessary to keep your track level transversely, except on curves, which must be maintained with a uniform elevation. Pay particular attention to keeping culverts, water-courses and ditches clear for the free passage of water. During heavy rain storms have your track patrolled in order to keep water moving in its proper channels and for the purpose of removing any wash which may be brought upon the track. Pay particular attention to all exposed places. During any emergency, of course, you are authorized to employ extra help but this help must be discharged as soon as the damage consequent upon the emergency has been repaired.

By pursuing such a policy with quite strict supervision I should figure to keep expenditures under the limit allowed per mile and with the accumulated savings from the several miles I should plan as often as possible to do some quite extensive reconstruction work beginning with the poorest sections of those portions of the track which carried the heaviest traffic. It seems to me by pursuing this policy it would be possible after a time to gradually improve all of the poorer sections of track, until ultimately all would be of standard construction.

I presume nearly every man present would advocate a similar policy under similar circumstances. May we not compare the highway system of a town with respect to the town's local transportation facilities to the railroad system of our whole State? If this is a fair comparison why should not a similar policy be applicable to each town's highway system? And if so applied why would it not produce similar results? I believe it would.

The policy which I have outlined applied to towns would mean the regular, systematic care of every mile of highway under the supervision of a man whose training and experience had been along this line of work. The roads would probably be laid off in sections each under the care of one or two men whose duty it would be to make repairs at stated intervals; these intervals would vary according to the importance of the road and available funds; in some cases repairs would be made daily; in others only one day a week or perhaps one week in a month, but the all important thing would be to have the work done systematically. The work that would receive attention would be clearing loose rocks and other obstructions from the surface of the road; draining water from ruts and low places and filling the same with suitable material, keeping ditches and culverts clear of waste and drift material and seeing that all culverts and ditches were supplied with proper outlets to carry the water away from the road. Bushes growing along the roadsides could be kept trimmed back and this is a matter that is sadly neglected. These same men too would be on hand during rain storms to protect hills and in this way often save repair bills many times the cost of their wages. I think you will agree that if the items of road work just enumerated could receive regular attention from someone interested a vast improvement in the condition of our roads would soon be noticed.

If it was deemed advisable to work each section only one week out of the month, sections could be worked in rotation so as to furnish continuous employment to men undertaking the work and this feature alone would go a long way towards securing efficient help for highway work.

The competition resulting from a system of this kind should prove to be considerable of an incentive to do good work. Any man having the care of a section would take pride in its appearance and this would be a stimulus to good, honest work. It seems to me it is really pride in their successful achievements, rather than premiums, which induces farmers and others to exhibit the results of their season's labors at fairs like the one held by this society.

Furthermore, I believe it would tend towards the creation of a force of trained road builders; for besides the regular maintenance work these employees would be assembled occasionally

to make up a road crew for doing more or less extensive jobs of construction. In this way they would be constantly learning the business of road building and repairing and it would indeed be strange if some exceptionally good men were not developed. From the ranks of these men, too, we could fill the office of road commissioner with men thoroughly conversant with all features of road work.

Here, then, is one way of bringing about an improvement in the highways in the rural sections. It is a way which does not call for increased appropriations for highways nor for the expenditure of more labor than is now put forth upon them but simply asks that the same amount of labor and energy be more carefully and systematically directed and expended. This proposition has been laid before the road commissioners of the State for two years but none of them have as yet seen fit to put the system into operation. It will be the method of taking care of all roads, though, some day.

Thus far, we have considered the possibility of improving our present roads so as to make them more agreeable and more usable and it certainly behooves us to keep this point in mind when we remember, as noted above, that 91 per cent of our road mileage is unimproved as to surface and of necessity must be so for a great many years.

In this connection I cannot refrain from referring to the simple device known as the King Split Log Drag which has been the means in many western and central states of changing many miles of wet, mirey, mud roads into good hard earth roads at all seasons of the year. I will only say of this device that any man can build one in three hours time at an expense of not over \$2.00 and it can be operated at a cost as low as fifty cents per mile under good conditions, although the cost of operation may run to \$2.50 or \$3.00 per mile. The drag has been used in several of the towns in Maine with most excellent results. Its success depends upon its constant and systematic use. One commissioner thinks in the use of the drag he sees the salvation of the rural towns of Maine. In a letter written one year ago, he says, describing his experience:

“Each way from the writer’s residence (one mile east of South Standish) is a section of highway of about three-fourths

of a mile in extent which is one of the last pieces of road in Cumberland county to become dry and firm in the spring.

"The first use of the drag was upon this section of road April 28, 1906. At commencement the mud was from two to eight inches or more in depth. Within three hours teams passed at a trot without sinking half the depth of a hoof or burying a wheel rim. Although the frost was not wholly out of the road at that time, and in spite of the repeated and heavy rains of June, there has not been a day nor even one hour when the preceding sentence would not be a correct description.

"People passing over the road have pronounced it in the finest shape of any piece of earth road they ever saw. The writer has lived by this piece of road all his life and not for forty years has the road in question been so free of mud and dust.

"West of the writer's place a section of road of over a mile in length was worked with the road machine in the month of May. This became in such bad shape that parties who had seen the effect of dragging where I first worked demanded that this section be dragged also. This I did by order of the commissioner, June 4 and 9, making a fine piece of road.

"In all about five and one-half miles, contiguously, have been dragged. Although nearly four months have elapsed since the drag has been used it can readily be told where the dragged and undragged sections join.

"The least expense per mile has been about \$1.50; the greatest a little rising \$6.00; the average expense per mile for the five and one-half miles, a little less than \$3.00. This would amount to \$275 for the entire highway mileage of the town."

If Mr. Sanborn had added at this point that the highway appropriations in his town have averaged \$2100 per year for several years and that \$1400 of this was available for summer work and that the full amount has been expended it seems to me that his statement, that by the use of the split log drag every mile of road in their town could be maintained in the splendid condition which his letter indicates at a cost not to exceed \$275 per year, would be very much more forceful. This also indicates clearly that in this town alone by raising no more money than at present upwards of \$1000 per year would be available for making permanent improvements.

A letter received from Mr. Sanborn this fall states that he has had entire charge of the roads in his town this year. This is probably due to the results of his work last year with the split log drag. The present season about eleven miles of road have been operated upon, the results being fully equal to those obtained in 1906. His letter states that work began on the second day of April and that all of the eleven miles had been put in thorough shape previous to May fifteenth and that he has found it unnecessary to use the drag since on any of these sections.

The following paragraph from Mr. Sanborn's recent letter so well illustrates the point that I have been trying to impress, that by systematic and regular work we can keep our highways in a good passable condition at comparatively small expense per mile and thereby have considerable money to expend in permanent work, that I cannot refrain from quoting same.

"The use of the drag in addition to producing the excellent roadway as described above has enabled us to make improvement at many points. The drainage has been improved by rebuilding several old culverts, by putting in culverts at several points where formerly there were none and by such other means as available. At other points, notably certain hilly sections of road, about two miles in extent in the aggregate, drainage bars have been built; sluice-ways and off-take ditches cleared out; many cart loads of material hauled onto the badly denuded parts; bushes cleared out and removed; the roadway straightened and widened to the extent of a carriage by filling the deep and uncalled for ditches, or rifle pits, dugged by the road machine; and a bad ledge and boulders removed from the roadway. From five to six miles of bushes have been cut and piled in a thorough and careful manner. For a large part of this distance a strip of bushes from six to sixteen feet in width was cut inside of the original ditches and upon what was clear and passable roadway when the road machine came to town. The very first year of the adoption of the road drag has enabled us to make these improvements while the conditions which called for them have been constantly growing worse under the use of the road machine. The use of the drag for a few years with the better methods which its use not only admits of, but calls for and entails, will enable us to continue these better-

ments, and as time goes on a larger and increasing part of the highway fund can be used in operating the drag, and the benefits will be apparent to all. Continue the use of the drag for one-fourth part as long as the false and destructive road machine system has been in vogue and the aspect and usefulness of our highways will undergo an immense change for the better."

The remarks of Mr. Sanborn in relation to the misuse of the road machine are none too strong and I can heartily concur in them.

You may think after hearing this quotation from Mr. Sanborn's letter that I should have said in the beginning that we should use the split log drag in order to make improvements in the highways in the rural districts but all the things which I have indicated as necessary to be done should be done in connection with using the drag. The first thing to do is to have some definite scheme for operating the highways. Give the work of highway keeping over to some competent man as a business and he will be willing and anxious to use whatever device is shown him for lessening labor and producing good results in his work. It almost seems sometimes as though road commissioners were not looking for labor-saving devices but rather for some means of furnishing as much labor as possible upon the road.

In the final analysis no one will doubt but that the first thing necessary to be done, in order to bring about an improvement in the highways, is to create a public sentiment which will demand highway improvement; but strange as it may seem experience everywhere has shown that the only way to create that sentiment at large is by first building and maintaining model sections of road for the people to see and use. One section of good road in any community is the best possible argument that can be put forth for more, and it invariably leads to a demand for more of the same kind.

If you ask me how model sections of road popularly known as permanent roads are to be constructed in the rural towns I will say it is well nigh impossible to do such work except through the medium of state aid. This point seems to have been given due consideration by the Legislature as well as the other fact that highway taxes are from three to ten times as

much in the rural towns as they are in our cities. In the state road law passed at the last session, provision was made for paying to these small and financially weak towns a much larger percentage of aid than will be paid to the cities. It is hoped that under the stimulus of this law a start on permanent work will be made in every town. As appropriations will be small in many towns only a limited amount of work can be done. On account of lack of machinery stone roads, which have become the standard type of improved roads for country highways, cannot be extensively built at present. We can, however, build good gravel roads in many sections. As compared with stone roads they are cheaper in first cost and more easily and economically taken care of; and in the opinion of many people are more pleasant to use. There is plenty of drainage work and grading to be done. Hills can be cut down, swamps raised, and drainage systems installed which will materially improve any road. All of these works, too, are entirely necessary before any kind of permanent surfacing work is undertaken. The law provides that the main traveled thoroughfare in each town shall be designated by the county commissioners as state road. The state commissioner will use his influence with towns to have them rebuild each year the poorest section of the state road then remaining, the idea being that as a chain is no stronger than the weakest link so is a road no better than its poorest place, and the object of the department will be to increase the loading possible on any of these roads with the expenditure of each year's appropriation.

Much has already been accomplished under our present state road law which has been in operation seven years. An increasing number of towns have each year taken advantage of the law and this shows conclusively that the towns are willing to help themselves when proper inducements are offered. In many towns since the advent of this law special appropriations have been made for the express purpose of reconstructing some bad section of the town roads on lines similar to those pursued in the state road work. In this way a good healthy public sentiment is being created which after a time will certainly be effective in demanding more improved and economical methods in handling ordinary highway work.

We have all heard of the wonderful highway system of France which stands today as a monument to the administrative greatness of Napoleon. In the report of Consul-General Skinner, above referred to, he explains why the French roads are good, as follows:

"French roads are good, not because of any superiority of raw materials, as the same materials exist everywhere; they are not good because of any special talent for road building, as the formula was furnished by an Englishman, and some roads just as fine may be seen in parts of the United States. The real superiority of the French highway system is attributable to the fact that it is under the constant intelligent supervision of an army of trained men, who discover within the organization opportunities for advancement and professional distinction which no mere county administration can offer."

Let us hope that the day is not far distant when trained men will have charge of road work and it will be done according to some systematic plan, in place of our present method of working a section here and a section there when we can find nothing better to do and letting the most of it go uncared for practically all of the time.

STATE ROAD LAW.

NOTE: Words in italics at the beginning of each section are inserted for convenience of reference and are no part of the law.

Public Laws of 1907. Chapter 112.

An Act to provide for State Aid, and for the expenditure of other public moneys, in the permanent improvement of main highways or State Roads.

Be it enacted by the Senate and House of Representatives in Legislature assembled, as follows:

Section 1. *Objects of this act.* The objects of this act are to obtain a more uniform system for the permanent improvement of main highways throughout the state, to secure the co-operation of the municipalities and the state in providing means therefor, and to provide for more efficient and economical expenditure of moneys appropriated for highway construction and repair.

Section 2. *State roads defined—county commissioners to designate—appeal from their decision—provision for second state road when first is completed.* The following described roads shall be considered main highways or state roads within the meaning of this act; in towns which have already availed themselves of the provisions of sections ninety-nine to one hundred and five of chapter twenty-three, revised statutes, nineteen hundred and three, and acts amendatory thereof and additional

thereto, such roads as have heretofore been designated state roads by the county commissioners; in towns which have not heretofore availed themselves of the provisions of sections ninety-nine to one hundred and five of chapter twenty-three, revised statutes, nineteen hundred and three, and acts amendatory thereof and additional thereto, but which vote to accept the provisions of this act, such roads as may hereafter be designated as the state road, under the provisions of this act. When notified by the state commissioner of highways that any town has voted to accept the provisions of this act, it shall be the duty of the county commissioners of the county in which such town is located, on or before June first of the year of such notification, to make such designation, and the clerk of each board of county commissioners shall return forthwith to the state commissioner of highways a record of their proceedings in each town and a description of each road designated as state road.

Provided, however, that upon petition of a majority of the legal voters in any town or a majority of the municipal officers of any city presented to the state commissioner of highways stating that in the judgment of the petitioners the road as designated by the county commissioners is not the main traveled thoroughfare in that town and that public convenience would be better served by the designation of some other road as the state road, which other road must be described in the petition, it shall be the duty of the state commissioner of highways, after such notice as he may order, to give a public hearing upon said petition at some convenient place where all parties interested may be heard. The state commissioner of highways, the mayor, or street commissioner or city engineer, if designated by the mayor to act in his stead, in the case of cities; the chairman of the selectmen or one member of the board whom the chairman shall designate, in the case of towns; the chairman of the board of assessors, or one member of the board of assessors who shall be designated by the chairman, in the case of plantations; and a county commissioner from an adjoining county to be chosen jointly by the state commissioner and the representative of the city, town or plantation as provided herein, shall constitute a board to hear said petitions and parties interested and designate the state road, which designation shall be final. County commissioners when hearing said petitions shall receive three dollars

per day and expenses, to be paid together with advertising and incidental expenses from the treasury of the county in which the town is located. In case the decision is against the petitioners said board shall order in their decision that the petitioners repay to the county within a fixed time all said costs in connection with the hearing of the petition. In case such payment shall not be made within the time so fixed then the treasurer of the county within which the petition was heard shall commence an action of debt against said petitioners or any of them in the name of the county for the recovery of said costs and expenses.

Provided, further, that when the state road in any town has been reconstructed in a permanent manner within the meaning of this act it shall be the duty of the county commissioners to designate the next important main thoroughfare as state road. Municipal officers may notify the state commissioner of highways when in their opinion the state road is entirely reconstructed as above, but such notification must be made immediately upon the completion of the road. It shall then be the duty of the state commissioner of highways, together with the county commissioners of the county in which the road is located to make an inspection of the road and to determine whether or not it is complete. If they find the road to be not complete they shall specify to the municipal officers in what particulars, and the municipal officers shall, in their next proposal for expenditure of joint funds, specify that it is desired to use said joint funds in completing said road according to said specifications returned by the state commissioner of highways and the county commissioners. If the road is complete the county commissioners shall designate another state road as provided in this section.

Section 3. *State highway department—officers and salaries.* To carry out the provisions of this act there is hereby created and established a state highway department whose chief officer shall be called the state commissioner of highways. Said commissioner shall be a civil engineer and shall be appointed by the governor with the advice and consent of the council, within ten days after this act takes effect. The term of office of said commissioner shall be four years and until his successor is appointed and qualified. He shall receive an annual salary of two thousand five hundred dollars, and in addition thereto such actual

expenses, not exceeding fifteen hundred dollars annually, as he may personally incur in the execution of the duties of his office, the same to be approved by the governor and council. Said commissioner shall be furnished with suitable offices at the seat of government properly provided with all necessary furniture, equipment and stationery, and he shall personally superintend the work of the department. Said commissioner may appoint, if the work of the department requires it, subject to the approval of the governor and council, one assistant commissioner who shall be a civil engineer and experienced in road building. Said assistant commissioner shall receive an annual salary not to exceed fifteen hundred dollars and actual expenses incurred when on official business within the state, the same to be approved by the governor and council. He may also appoint one clerk and bookkeeper at a salary not to exceed thirteen hundred dollars and one stenographer at such salary as may be determined upon and approved by the governor and council.

He may also employ such other help as the execution of this act shall make necessary upon terms to be approved by the governor and council.

All salaries and expenses called for in this section shall be charged against administration except as hereinafter provided.

Section 4. *Towns to make permanent improvement of main highways and amounts to be set apart for that purpose—county commissioners to act for unincorporated townships.* Each town shall, of the amount of money annually raised and appropriated for the repair of its highways, set apart the following amounts, to be used for the permanent improvement of its main highways, such improvements to be under the advice of the state commissioner of highways.

Towns having a valuation of less than two hundred thousand dollars, fifty cents on each one thousand dollars of valuation, and towns of two hundred thousand dollars and less than one million dollars, thirty-three and one-third cents on each one thousand dollars of their valuation; towns of one million dollars and less than three million dollars valuation, twenty-five cents on each one thousand dollars; towns of three million dollars and less than five million dollars, sixteen and two-third cents on each one thousand dollars; towns of five million dollars and less than fifteen million dollars, eleven and one-ninth cents on

each one thousand dollars; and towns of fifteen million dollars and upwards, eight and one-third cents on each one thousand dollars.

And the commissioners of each county within which are located unincorporated townships shall set apart of the money raised and appropriated for the repair of highways in such unincorporated townships, thirty-three and one-third cents on each one thousand dollars of the valuation of each unincorporated township in which there are highways, to be expended for permanent improvements of said highways as indicated in the first paragraph of this section.

Section 5. *Additional sum to be appropriated if town desires state aid—application for state aid—selectmen to insert article in warrant for town meeting.* If any city or town or organized plantation or the county commissioners for any unincorporated township desire state aid, as contemplated by this act, for the permanent improvement of the main highways within such city, town, organized plantation or unincorporated township, in addition to the improvements provided for by the amount set apart, as required by section four of this act, such city or town or organized plantation and the commissioners of the county for such unincorporated township, shall raise, appropriate, and set apart an additional sum equal to fifty per cent of the amount required to be set apart for permanent improvements under section four of this act, and all money set apart by any city, town or organized plantation or the county commissioners for any unincorporated township under this section, meaning the additional sum equal to fifty per cent of the amount required to be set apart under section four of this act, shall be raised, appropriated, and set apart in addition to the amount regularly raised for the maintenance of highways. Application for such state aid in any year, and notice of the raising, appropriation, and setting apart of such additional sum by any city or town, or organized plantation or by the commissioners of such counties as have unincorporated townships entitled to state aid, shall on or before April fifteenth of such year, be made and given to the state commissioner of highways by the clerks of such cities, towns, plantations or boards of county commissioners; except that in the case of cities the time may be extended to June fif-

teenth. Otherwise they shall not be entitled to such aid for such year.

It shall be the duty of the selectmen of each town to insert in the warrant for each annual town meeting an article calling upon the voters to vote 'yes' or 'no' on the adoption of the provisions of this act relating to the appropriation of money necessary to entitle the town to state aid for highways, for the year in which such meeting is to be held.

Section 6. *Apportionment of state aid.* The state commissioner of highways shall apportion from the amount appropriated under the provisions of this act, to each city, town, organized plantation and unincorporated township which has applied for state aid and has raised, appropriated, and set apart the additional amount provided for in section five entitling it to state aid, for the permanent improvement of its highways, for each dollar so set apart by such city, town or organized plantation, or for such unincorporated township, under sections four and five, the following amounts:

Towns, organized plantations and unincorporated townships, having a valuation of less than one hundred thousand dollars, two dollars for each one dollar set apart under sections four and five; towns, organized plantations and unincorporated townships having a valuation of one hundred thousand dollars and less than two hundred and fifty thousand dollars, one dollar and fifty cents; towns, organized plantations and unincorporated townships having a valuation of two hundred and fifty thousand dollars and less than five hundred thousand dollars, one dollar and twenty-five cents; towns having a valuation of five hundred thousand dollars and less than one million dollars, one dollar; cities and towns having a valuation of one million dollars and upwards, seventy-five cents.

Section 7. *Joint fund for improvement of state road—proposal to be filed; by towns applying for state aid; by towns not applying—state commissioner may furnish engineers free of charge—special expenses—how charged—statement of improvements to be filed—joint fund or any part thereof may be expended succeeding year.* The amount of money set apart by such city, town, organized plantation, or for such unincorporated township as applies for state aid, as provided for in sec-

tions four and five, with the amount apportioned by the state commissioner of highways, as provided for in section six, shall constitute a joint fund for the permanent improvement of the state road in each of said cities, towns, organized plantations or unincorporated townships. And on or before May fifteenth of each year it shall be the duty of the officers having jurisdiction over highways in said cities, towns, organized plantations and unincorporated townships to file with the state commissioner of highways a proposal setting forth the location on the state road and nature of the permanent improvements desired to be made; except that in the case of cities the time may be extended to July fifteenth. The state commissioner of highways shall upon receipt of this proposal notify the said officers whether or not the proposed location and the proposed work meets with his approval, and if not, his reasons therefor.

Such cities, towns, organized plantations and unincorporated townships as do not apply for state aid under section five of this act may expend the money set apart under section four for permanent improvements upon such highways as the officers having jurisdiction over highways in such cities, towns, organized plantations or unincorporated townships may designate. And on or before June first of each year it shall be the duty of the said officers having jurisdiction over highways in said towns, organized plantations and unincorporated townships to file with the state commissioner of highways a proposal setting forth the location and nature of the permanent improvements desired to be made; and cities shall have until July fifteenth to file said proposal. The state commissioner of highways shall upon receipt of this proposal notify the said officers whether or not the proposed work meets with his approval, and if not, his reason therefor. He may also, upon the request of the said officers of any city not employing a city engineer, or town or organized plantation or unincorporated township, furnish to such city, town, organized plantation or unincorporated township, free of charge, the services of any engineer in the employ of the state under this act for the purpose of consultation and advice concerning the construction, improvement and repair of the highways in such city, town, organized plantation or unincorporated township. And any special expenses incurred in providing such engineers shall be charged against administration and shall be

paid for out of the general appropriation made under this act. But towns may, if they see fit, pay for such services out of any moneys appropriated for highway repairs. The officers having jurisdiction over highways in such cities, towns, organized plantations, or unincorporated townships as shall make improvements under section four of this act, and do not take advantage of state aid, shall file with the state commissioner of highways on or before November first a statement that said improvements have been made according to the proposal filed by them on or before the fifteenth day of July and accepted by him, together with a detailed statement of the cost of same.

Any part of said joint fund not expended during the year for which it is set apart and apportioned, may be expended during the succeeding year. If, in the opinion of the state commissioner of highways, said joint fund or any part thereof, for any year cannot be advantageously expended, the same may be expended the succeeding year.

Section 8. *Work costing over \$1,000 to be done by contract—provisions—towns may bid—inspectors; appointment; duties; state may furnish engineering superintendence for work costing less than \$1,000—certificate of cost to be filed.* As soon as the location and general character of the proposed work has been determined upon in towns where one thousand dollars or more of joint fund is to be expended under the provisions of this act, it shall be the duty of the state commissioner of highways to make surveys, plans, estimates, and specifications for the proposed improvement. These plans and specifications shall conform substantially to the proposal filed under the preceding section and agreed upon between the state commissioner of highways and the selectmen or other officers having jurisdiction over highways. Changes of grade and alignment may be made when the road will be benefited thereby and authority is hereby given to make such changes. Said plans and specifications shall, upon completion, be forwarded to the selectmen or other officers having jurisdiction over highways in the said town in which the particular work is located, whose duty it shall be to immediately advertise for bids for doing said work according to said plans and specifications in two or more public newspapers, printed or circulated in the county, for three weeks successively, at least once in each week. This advertisement shall state the place

where bidders may examine said plans and specifications, and the time and place where the bids for said work will be received by the board of selectmen or other local officers having jurisdiction. Each bidder must accompany his bid with a certified check payable to the treasurer of the city, town, plantation or county as the case may be, for ten per cent of the amount of his bid as a guarantee that if the work is awarded to him, he will enter into a contract with said board for the same. All bids so submitted shall be immediately and publicly read at the time for opening the same, as stated in said advertisement, and referred to the state commissioner of highways for his approval. The selectmen or other local officers having jurisdiction and the state commissioner of highways shall have the right to reject any or all bids, if in their opinion good cause exists therefor, but otherwise they shall award the contract to the lowest responsible bidder. The successful bidder shall give satisfactory evidence of his ability to perform the contract, and shall within fifteen days from the awarding of the contract also furnish bonds in the penal sum of at least the amount of the contract with two or more sureties, owners of real estate in the county, or a surety or trust company, authorized to transact business within the state, to be approved by both the board receiving the bids and by the state commissioner of highways, conditioned for the faithful performance of said work in strict conformity with the contract, plans and specifications for the same. The contract, plans and specifications shall be executed in triplicate, one copy going to the contractor, one to the local board of officers having jurisdiction and one to the state commissioner of highways. Whenever the mayor and city council or such other board as has jurisdiction over highways in a city, or the selectmen of any town, or the assessors of any organized plantation, or the county commissioners for unincorporated townships, shall desire in behalf of such city, town, plantation or unincorporated township to bid upon work located within said city, town, plantation or unincorporated township, they shall submit their bids to the state commissioner of highways at least one day prior to the time specified for the opening of the other bids as stated in the advertisement for bids, and all bids submitted in behalf of town shall be subject to the requirements made and provided for in this section, except that no certified check or bond shall be

required of any town or city making bids or accepting contract for construction.

No bids in behalf of towns shall be opened by the state commissioner of highways until after the other bids for the same work shall have been publicly opened and read by the board receiving them, as required by this section, and forwarded to the state commissioner of highways. If the state commissioner of highways shall find from the bids so submitted that the bid in behalf of the town is the lowest, the state commissioner of highways shall thereupon award the contract to such town, whereupon the board of local officers having jurisdiction over highways in such town shall forthwith execute a contract in behalf of such town with the state commissioner of highways in behalf of the state, to fulfill all the requirements and terms of the specifications and plans for said work, under which their bid was submitted. The state commissioner of highways, on all work executed by contract, shall make such inspection from time to time as he may deem necessary and all material furnished and labor performed shall be to his satisfaction.

The state commissioner of highways may appoint inspectors if he deems it necessary to supervise the construction of all roads built by contract under the provisions of this act. He shall prescribe their salaries, which shall be satisfactory to the governor and council; said salaries, however, and any special expense incurred in making surveys, plans and layouts for contract work shall be charged against the joint fund for the particular work in question.

The inspector shall require all provisions of the contract and specifications to be strictly adhered to by the contractors and immediately after the completion of each contract and before final payment is made the inspector shall make oath that all work has been completed according to contract, plans and specifications.

In towns where less than one thousand dollars of joint fund is to be expended the state commissioner of highways may, upon application of the selectmen or other officers having jurisdiction, or when in his opinion more economical results will be obtained by so doing, make surveys, plans, estimates and layouts and furnish such superintendence as may be necessary for the proper prosecution and completion of state road work. Any

expense incurred in doing such work shall be a proper charge against the joint fund for that particular work. A certificate of the cost of every road constructed under the provisions of this act not upon a contract shall be filed with the state commissioner of highways, by the selectmen or authorized authority over the work of the town in which such road shall have been constructed, on or before November first. Survey notes, copies of all plans and contracts together with all other records pertaining to the expenditure of any state moneys under this act or any subsequent act for the improvement of highways shall be filed and remain of record in the office of the state commissioner of highways.

Section 9. *Payment of state aid—how made—payments for contract work.* Payment of the state's share of the joint fund for any town shall be made as follows: When the selectmen of said town shall certify under oath to the state commissioner of highways, that said town has paid out on account of the state road construction the full amount of its share of the joint fund, the state commissioner of highways shall notify the governor and council of that fact and they shall draw a warrant upon the state treasurer in favor of the town for one-half the state's share of said joint fund, for said town. And upon the completion of work in said town the state commissioner of highways shall notify the governor and council of the amount due said town and they shall draw a warrant upon the state treasurer in favor of the town for said amount. Provided, however, that the state's payment may in the discretion of the state commissioner of highways be made in one sum after completion of the work. Work performed by individuals or corporations, not towns, under contract shall be paid for as follows: At or near the end of each calendar month during the progress of the work the state commissioner of highways shall certify to the selectmen of each town in which such contract work is being performed, the amount and value of the work done on such contract during the month, together with a statement of eighty-five per cent of the value of such work, which shall be the amount due the contractor and payable to him by the town treasurer not later than the fifteenth of the month succeeding the month in which the work was done; provided, however, that thirty days after the state commissioner of highways shall certify to the select-

men that all work in connection with any such contract has been completed, inspected and accepted, the full unpaid balance of said contract as shown in said certificate shall be payable to the contractor by the town and not before.

Section 10. *Maintenance of state roads.* Any highway within any city or town improved by the expenditure of said joint fund, shall thereafter be maintained, as are other highways, within the city, town, plantation or township within which it is located, and to the satisfaction of the state commissioner of highways.

Section 11. *Liability for damages.* The state shall not be liable to any person or corporation for damages arising from the construction, rebuilding, improvement or maintenance of any highway under this act. In case any person or persons or corporation shall sustain damage by any change in grade or by taking of land to alter the location of any highway which may be improved under this act the person or persons or corporation injured thereby shall be entitled to compensation to be assessed by the officers having jurisdiction where the road lies, said damage to be assessed and paid according to provisions of statute. In case the award of damages is not satisfactory, parties aggrieved shall have the same right of appeal as is provided by law in the case of damages for altering highways.

Section 12. *State road fund, how raised—unexpended balance to be carried to succeeding year.* To provide funds for the purposes of this act, there shall be assessed annually on all property in the state a tax of one-third of one mill on each dollar of valuation and the money derived from said tax shall be for the exclusive uses and purposes set forth in this act. Any unexpended balance at the end of any year shall be added to the fund for the next year. From this fund shall be paid all state aid for road improvement as provided for under this act.

Section 13. *Connecting links of road to be built.* After providing for the payment of state aid applied for, the balance of the fund or any part of it may be expended by the state commissioner of highways in building connecting roads between state roads as designated by the county commissioners with the object of establishing as far as possible a complete system of continuous main highways throughout the state. Provided, however, that no expenditure shall be made under this section

in any town which shall fail to accept the provisions of this act as to application for state aid and expenditure of joint funds. Any expenditures made under authority of this section shall be apportioned among the several counties of the state each year on the basis of total road mileage in the county to total mileage in the state and the location of roads to be improved under this section shall be determined for each county by the state commissioner of highways and the county commissioners of the county. The same general provisions made for the construction and maintenance of other state roads under this act shall apply to roads constructed under authority of this section; except that the whole cost of construction may be paid by the state.

Provided, further, that the state commissioner of highways may, subject to the approval of the governor and council, apportion in any one year, in addition to the amounts apportioned under section six, not exceeding twenty-five per centum of said unexpended balance of the appropriation hereunder, after providing for the payment of state aid applied for, to towns in which the joint fund is insufficient to properly complete the work proposed or undertaken and necessary to be done as one job.

Section 14. *Definitions; fiscal year; valuation.* The fiscal year for the purposes of this act shall end December thirty-one. Wherever the word 'valuation' is used in this act it shall mean the valuation last made by the state board of assessors. Wherever the word city, town or organized plantation or unincorporated township is used singly in this act and the phrase or clause in which it is used could as well apply to all four classes of political subdivisions or to any other one class it shall be understood to so apply.

Section 15. *Other duties of state commissioner of highways—disseminate knowledge—hold county meetings.* In connection with the foregoing duties the state commissioner of highways, having first regard for the performance of those duties, shall also compile statistics relating to the public ways in the cities and towns of the state, and make such investigation relating thereto as he shall deem expedient, in order to secure better and more improved highways in the state. He shall also by means of maps, charts, cuts, drawings, prints, publications, printed or written articles, lectures, or otherwise, disseminate knowledge throughout the state concerning the best known eco-

nomical methods for the building and maintaining of highways, including bridges, in the cities and towns of the state, and particularly to impart such information, in manner as aforesaid, to the county commissioners of counties, the street commissioners of cities, the selectmen of towns and other municipal officers whose duties it may be to have the care and management of the expenditure of money and the building and keeping in repair of the highways in the state. Said commissioner shall hold each year under the auspices of the county commissioners, a meeting in each county for the open discussion of questions relating to the building and maintaining of public ways, of which due notice shall be given to the towns and cities in each county by the said county commissioners.

Section 16. *Annual report.* The state commissioner of highways shall make an annual report to the governor and council of the operations of the state highway department. This report shall show the number of miles, cost and character of the roads built under its direction, together with a statement of expenses of the department and such other information concerning the condition of public roads of the state and the progress of their improvement as may be proper. He shall also make recommendations for any legislation which to him seem expedient and necessary.

His report shall be transmitted to the secretary of state as soon after the first Wednesday of January of each year as possible.

Section 17. *County and municipal officers to furnish information relative to ways and bridges.* County commissioners and city and town officers having the care of and authority over public ways and bridges throughout the state shall, on request, furnish said commissioner any information which they may possess and required by him, concerning ways and bridges within their jurisdiction.

Section 18. *Repealer.* Sections ninety-nine to one hundred and five inclusive of chapter twenty-three, revised statutes of nineteen hundred and three and acts amendatory thereof, and chapter one hundred and forty-six of the public laws of nineteen hundred and five are hereby repealed when this act takes effect.

Section 19. *When act takes effect.* This act shall take effect January first, nineteen hundred and eight.

FINANCIAL STATEMENT SHOWING APPLICATION OF STATE ROAD LAW TO EACH TOWN.

NOTE: To simplify appropriations we have assumed that towns would prefer to set aside under Section 4 only the whole number of dollars represented by their thousands of valuation and have accordingly dropped off the odd cents in figuring this amount. State Assessors' 1907 valuation used.

Town.	County.	Valuation.	Town's appropriation for 1907.	Set aside under Section 4.	Appropriation necessary to secure State aid, Section 5.	Town's part of joint fund, Sections 4-5.	State aid under Section 6.	Joint fund for State road, Sections 4-5-6.

REPORT OF STATE ROAD WORK FOR 1906.

Following the practice of the past two years we herewith present a compilation giving a brief description of state road work done in 1906. The information is taken from the county commissioners' returns to the governor and council.

It is apparent by a close inspection of the reports that a considerable number of towns in making report of the cost of work give only the maximum expenditure against which they can draw aid when in reality the expenditure has been considerably more. Such a case for example occurs in report for city of Augusta. In this case we have substituted for the figures reported by the county commissioners, viz. \$600, the actual cost, \$2,250.

Consequently the reports of work costing exactly \$600 cannot always be depended upon as showing the true cost of work reported.

STATE ROAD WORK FOR 1906.

Compiled from County Commissioners' returns to the Governor
and Council.

ANDROSCOGGIN COUNTY.

Town.	Length in feet.	Description.	Cost.	Cost per foot.
Durham	870	No description given.	\$269.70	.31
E. Livermore	1,485	Surfacing with crushed stone and other material. \$386.41 Labor. 186.68	573.09	.39
Lewiston	440	Surfacing with a layer of stone 18 inches in depth, covering with clay to a depth of about 6 inches surfacing with gravel.	400.00	.91
Lisbon	742	Widening; grading; surfacing with gravel to a length of 742 feet and a depth of about 1 foot.	894.49	1.21
Mechanic Falls	100	Putting in culvert; grading; erect- ing suitable fence.	203.50	2.03
Poland	2,560	Surfacing sandy road with clay and gravel to a depth of 1 foot in the middle and tapering off to the sides.	600.00	.23
Wales	342	Rock foundation to a depth of from 1 to 2 feet; surfacing with dirt and gravel.	234.43	.69
Webster	1,200	Putting in culvert; underdraining; surfacing with gravel.	600.00	.50
Total,	7,739 feet	Total cost,	\$3,775.21	\$0.49
"	1.47 miles.	Cost per mile at same rate,	\$2,568.16	

AROOSTOOK COUNTY.

Town.	Length in feet.	Description.	Cost.	Cost per foot.
Amity	300	Swamp road; rock filling; rock shoulders to widen, covering with 6 inches of pounded rock, gravel surfacing.	\$250.50	.83
Ashland	1,361	Turnpiking; ditching; draining; building large stone culvert.	447.78	.33
*Bancroft	1,815	Turnpiking; widening, building four culverts.	200.33	.11
Blaine	1,133	Turnpiking; widening; graveling,	314.67	.28
Bridgewater	1,496	Building 313 feet of rock foundation; turnpiking subgrade; graveling 1188 feet; building new railing on Dead Brook bridge.	264.90	.18
Caribou	1,320	Grading; underdraining; covering with crushed stone 30 feet wide; rolling with steam roller.	1,000.00	.76
Castle Hill	1,881	Turnpiking; filling with rock; graveling.	349.27	.19
Chapman Pl.	1,000	Grading with rocks and gravel.	100.00	.10
Connor Pl.	1,320	Turnpiking; rock filling; graveling.	450.00	.34
Crystal	1,353	Turnpiking; ditching; rock foundation in center for distance of 1,155 feet.	200.00	.15
Dyer Brook	2,640	Rock foundation; covering with dirt; surfacing with gravel.	250.00	.09
Eagle Lake Pl.	6,600	Turnpiking; ditching, widening; putting in stone culverts.	300.00	.04
Easton	680	Road across bog; grading with rock; graveling.	600.00	.09
Ft. Fairfield	2,640	Turnpiking; ditching; draining; covering with crushed rock.	\$700.00	.27
Haynesville	316	Widening; filling in low place with gravel; graveling. Putting in stone culvert.	300.00	.95
Hersey	220	Building new bridge; building and raising approaches to same of rock and gravel.	225.45	1.01
Hodgdon	742	Building with rock foundation in center; covering with 8 inches of gravel. Putting in a tile culvert.	400.00	.54
Houlton	1,750	Building of crushed rock; wetting and rolling with steam roller; surfacing with 607 loads of gravel.	1,145.25	.65
Limestone	2,640	Turnpiking; grading; graveling; blasting ledges.	409.50	.15
Linneus	990	Building rock foundation, 18 feet wide, 1 foot deep on edges, 18 inches in center; covering with dirt.	325.00	.33
Littleton	1,320	Turnpiking; graveling.	520.00	.39
Ludlow	1,128	Building rock foundation; covering with gravel.	400.00	.36
Macwahoc Pl.	900	Turnpiking; graveling; removing rocks; draining.	150.00	.17

*Hardly up to our standard. Co. Com'rs.

AROOSTOOK COUNTY—Continued.

Town.	Length in feet.	Description.	Cost.	Cost per foot.
Mapleton	275	Building a stone bridge or grade 28 feet wide with 20 foot roadway between railings. Average depth of rock fill 9 feet.	686.20	2.50
Mars Hill	1,914	Building rock foundation; covering with dirt; surfacing with gravel.	511.13	.26
Masardis	300	Cutting down two steep hills, making fill between.	230.00	.77
Merrill Pl.	1,336	Building rock foundation, covering with gravel; blasting ledge; putting in drain pipe culvert.	400.00	.30
Monticello	5,280	Turnpiking; graveling to a depth of about 2 feet in center; putting in \$100 worth of sewer pipe for drainage.	624.50	.12
Moro Pl.	2,095	Turnpiking; widening; ditching; draining.	225.50	.11
New Limerick	693	Excavating 12 feet wide, 6 inches deep; filling with stone; covering with 6 inches of clay; covering 60 feet of same with 6 inches of gravel; putting in two 12 inch drain pipe culverts. Width of road worked 24 feet.	254.55	.37
New Sweden	3,960	Turnpiking; blasting; filling; draining.	427.04	.11
Oakfield	1,155	Turnpiking; widening; removing rocks; putting in seven stone culverts.	313.89	.27
Orient	495	Raising road by putting in about 1000 loads of gravel; widening to a width of 24 feet; putting in two stone culverts.	201.00	.41
Perham	2,093	Turnpiking; grading with rock and gravel.	401.45	.20
Presque Isle	2,856	Filling one ditch with rocks; covering whole width with rocks and pounding up with sledges; covering with 12 inches of gravel for 495 feet. Also turnpiking and graveling with beach gravel for 2361 feet.	606.69	.21
Reed Pl.	503	Building rock foundation; covering with gravel; draining.	302.40	.60
Sherman	2,287	Swamp road; rock filling; widening; covering with crushed rock.	600.00	.26
Silver Ridge Pl.	300	Filling center of road with rock; covering with dirt and gravel; ditching and draining.	237.00	.79
Smyrna	1,400	Swamp road; rock filling; covering with gravel; putting in culverts of eight inch tiling.	400.00	.29
St. Francis Pl.	3,085	Cutting out bank; draining; widening.	300.00	.10

*. Amounts used simply for bridge and culvert work where lengths are not given, are not used in working out the averages, but are added into total cost.

TESTS OF ROAD MATERIAL.

At the request of this office the State Survey Commission of Maine employed Henry Leighton of the faculty of Cornell University, as geologist, to collect samples of rock suitable for road metal.

Twenty-five samples were collected from different localities in this State and one from a neighboring county in New Hampshire.

These samples were sent to the Office of Public Roads, Division of Tests, Department of Agriculture at Washington, where tests were made under the direction of Hon. L. W. Page, Director.

Duplicate samples are also on file in this office.

Correspondence has also been started with Mr. Leighton to define more closely the exact locality in which these rocks were found in order that any one interested might write this office and from information on file here locate the ledge exactly.

Herewith is printed a table showing the results of the tests and an explanation of the same.

In Bulletin No. 79, U. S. Department of Agriculture on the "Testing of Road Materials," by Logan Waller Page and Allerton S. Cushman, and Bulletin No. 85, on the "Cementing Power of Road Materials," by the same authors, may be found full descriptions of the various tests made on road materials in a modern laboratory. Following are brief abstracts from the above bulletins, sufficient in detail to explain the table, which gives the results of the tests of the samples sent from Maine.

There are three chief properties essential to good roads materials; they are hardness, toughness, and cementing or binding power.

Hardness will be defined as the resistance which a material offers to the displacement of its particles by friction. The measure of hardness will be inversely as the loss of weight arising from the scouring by an abrasive agent. Only one test has yet been devised for determining the hardness of road materials. This is the Dorry test, which consists in grinding specimens with sand of standard size and quality.

In the consideration of road material, toughness is understood to mean the power possessed by a material to resist fracture under impact. As the surface of a road is continually subjected to the pounding of traffic, it can be seen that toughness is an important property from the standpoint of the road builder. The test is made on rock cylinders with an impact machine. The number of blows required to destroy the test piece is used to represent the toughness.

The abrasion test from which is obtained the per cent. of wear and the French coefficient of wear is made in the following manner: The sample to be tested is first broken in pieces that will pass, in all directions, through a 2.4 inch ring, but not through a 1.2 inch ring. The stones are then cleansed, dried in a hot-air bath and cooled. Five kilograms are weighed and placed in one of the cylinders of the testing machine, the cover bolted on, and the cylinder rotated at the rate of 2,000 revolutions per hour for five hours. The contents of the cylinder are then placed on a sieve of 1-16 inch mesh. After the fragments of rock remaining have been cleansed, dried, and cooled, they are weighed and their weight subtracted from the original five kilograms. The difference obtained is the weight of detritus under 1-16 inch worn off in the test. The per cent. of wear can now be easily ascertained. It has been found that only the best varieties of rock give less than 100 grams of detritus, or 20 grams per kilogram, or 2 per cent. of their weight. The number 20 was therefore adopted by the French engineers as a standard of excellence. The French coefficient of wear may be obtained by the following formula: French coefficient of wear = $20 \times \frac{20}{W} = \frac{400}{W}$, in which the "W" is the weight in grams of the detritus under 1-16 inch in size obtained per kilogram used.

The binding or cementing power of rock dust is determined by an impact test carried on as described below. After the rock has been broken into sufficiently small fragments, it is placed in a ball mill and ground for two and a half hours. This ball mill contains two chilled-steel balls, which weigh 25 pounds each, and is revolved at the rate of 2,000 revolutions per hour. The dust thus obtained which will pass through a very fine sieve is mixed with water and made into briquettes. After cooling they are tested in an impact machine. The standard fall of the hammer is 0.39 inch, and this blow is repeated until the bond of cementation of the material is destroyed. The number of blows required to destroy the bond is noted, and the average obtained upon five briquettes is given as the cementing value.

The above abstracts of Bulletins 79 and 85 are taken from Rhode Island Report, 1907.

Table Showing Results of Laboratory Tests on Maine Rocks.

Town.	Locality.	County.	Name of Rock.	Specific gravity.	Weight per cubic foot, in lbs.	Water absorbed per cubic foot, in lbs.	Per cent of wear.	Coefficient of wear.	Hardness	Toughness.	Cementing value.	Remarks.
Bangor.	Highhead.	Pen.	Slate.	2.70	168	0.07	*	*	*	*	Fair (17).	*Sample only large enough for test for cementing value.
Brooksville.	South Brooksville.	Han.	Altered Rhyolite.	2.80	175	0.77	3.3	12.2	18.1	9	Excellent.	A hard rock with low toughness, medium resistance to wear and excellent cementing value.
Brooksville.	South Brooksville. Ames Point	Han.	Altered Andesite.	2.95	184	0.22	2.1	19.4	16.5	15	Good.	A rock of medium hardness and toughness, with high resistance to wear and good cementing value.
Camden.		Knox	Feldspathic Quartzite.	2.70	168	0.16	2.7	14.7	18.8	9	Fair.	A hard rock with low toughness, rather high resistance to wear and fair cementing value.

Eastport.		Was.	Altered Diabase. (Trap)	2.85	178	0.67	2.0	20.0	18.2	20	Good	A hard and tough rock with high resistance to wear and good cementing value. Should make a satisfactory road material.
Hallowell.		Ken.	Granite.	2.55	159	1.72	3.1	12.7	18.7	9	Good.	A hard rock with low toughness, medium resistance to wear and good cementing value.
Harpswell.	One mile south of Harpswell Center	Cum.	Diabase. (Trap)	3.00	187	0.37	2.1	18.0	18.4	30	Very Good.	A hard and tough rock with high resistance to wear and very good cementing value. Best suited for heavy traffic roads.
Jay.	North Jay.	Fra.	Granite.	2.65	165	0.39	2.3	17.4	*	*	Fair.	A rock with high resistance to wear and fair cementing value. *No piece large enough for hardness and toughness tests.
Kittery.		York.	Quartzite Schist	2.75	172	0.49	2.3	17.5	16.5	18	Good (47)	A rock of medium hardness and toughness with high resistance to wear and good cementing value.
Kittery.	One mile north of.	York	Gabbro	2.85	178	1.03	3.2	12.4	17.8	11	Excellent(325)	A fairly hard but not very tough rock, with rather high resistance to wear and excellent cementing value. Should give good results under ordinary conditions of traffic.

Table Showing Results of Laboratory Tests—Continued.

Town.	Locality.	County.	Name of Rock.	Specific gravity.	Weight per cubic foot, in lbs.	Water absorbed per cubic foot, in lbs.	Per cent of wear.	Coefficient of wear.	Hardness.	Toughness.	Cementing value.	Remarks.
Machias.	Two miles east of.	Was.	Altered Diabase. (Trap)	2.90	181	0.22	2.8	14.5	16.9	11	Good (58).	A rock of medium hardness and rather low toughness with fairly high resistance to wear and good cementing value. Should make a satisfactory road material.
North Haven.		Knox.	Fragmental Rhyolite.	2.70	168	0.50	3.2	12.6	18.0	7	Excellent.	A hard rock with low toughness, medium resistance to wear and excellent cementing value.
North Haven	North Haven Island	Knox.	Altered Andesite.	2.95	184	0.41	2.7	15.0	17.6	12	Good.	A fairly hard but not very tough rock, with rather high resistance to wear and good cementing value.

Portland.		Cum.	Quartzite Schist.	2.75	172	0.27	2.6	15.4	17.7	14	Good (48)	A rather hard rock of medium toughness with high resistance to wear and good cementing value.
Rockland.	Lime Quarries.	Knox.	Marble.	2.70	168	0.36	5.6	7.1	10.5	5	Very good	Should make a satisfactory road material. A soft rock with low toughness, low resistance to wear, and very good cementing value. Best suited for light traffic roads.
Rockland	Two miles southwest of.	Knox.	Feldspathic Quartzite.	2.65	165	0.54	2.6	15.2	18.8	20	Fair.	A hard and fairly tough rock, with rather high resistance to wear and fair cementing value.
Roque Bluffs.	Eight miles south of Black Head.	Was.	Altered Diabase. (Trap)	2.90	181	0.50	1.6	24.7	17.9	27	VeryGood (82)	A hard and tough rock with very high resistance to wear and very good cementing value. Should give good results under heavy traffic.
Saco		York.	Quartzite.	2.80	175	0.27	2.5	15.7	18.5	53	Good (31)	A hard and exceedingly tough rock with high resistance to wear and good cementing value. Best suited for heavy traffic roads.
Saint George.	Long Cove.	Knox.	Hornblende Gabbro.	3.00	187	0.28	2.8	14.3	17.8	12	Good.	A hard but not very tough rock with fairly high resistance to wear and good cementing value.

Table Showing Results of Laboratory Tests—Continued.

APPENDIX

**Report of Bridge Investigation made by
State Commissioner of Highways**

as ordered by the

Seventy-third Legislature

of the

State of Maine

1907

REPORT ON BRIDGE INVESTIGATION.

ORDER OF LEGISLATURE.

Ordered, The Senate concurring that the State Commissioner of Highways be and hereby is authorized and directed to make an investigation to ascertain the length, physical character and condition, original cost and annual cost of maintenance together with such other information as he may deem pertinent or necessary concerning each and every bridge within the State.

The results of this investigation shall be published as a part of the next annual report of the State Commissioner of Highways and one thousand copies of the results of the investigation shall be published in pamphlet form for the use of the next Legislature.

(Passed March 25, 1907.)

INVESTIGATION.

Pursuant to the foregoing order a considerable amount of time has been devoted the past season in carrying on the investigation of the bridges of the State.

Letter to Other States.

As a preliminary step in the investigation a letter was prepared and forwarded to each state in the Union from which we quote the following:

"If an investigation of this kind has ever been undertaken in your state I would thank you to forward me copies of the blanks used in making the investigation, if possible. If the results of such an investigation have been published in the form of a report I would also be glad to have a copy of that. If there is any general law in your state whereby the state or county

assumes any proportion of the cost of maintenance or re-construction of highway bridges, I would be glad to have a copy of the law."

Replies.

We received replies to this letter from thirty-two states and from the Province of Ontario, Canada. It is learned from the letters that no state has ever made a similar investigation neither has any state a general law under which the state builds or maintains bridges. In general, it appears that bridges are built and maintained as are highways, that is, either by the town or by the county.

The following exceptions to this general rule are noted:

Pennsylvania: Certain large bridges have been built by the State; other bridges are built and maintained by the counties; still other bridges are built and maintained by the townships, but the different classes of bridges are not definitely fixed by law.

Vermont: State may pay half the cost of building or repairing a highway or bridge within a town when other towns in the vicinity are deemed to be benefited thereby and the town is excessively burdened with taxes raising at least \$1.50 on \$1.00 of the grand list for the previous five years for town and road purposes, not including schools.

Note: Grand list 1% of total valuation.

Iowa: Counties build and maintain all bridges over a certain length. The minimum length being 12 feet and the maximum 20 feet in the different counties. Bridges of less span are designated as culverts and are built and maintained by the townships.

Illinois: Towns take care of the construction of bridges except when the cost of a bridge will exceed 20c. on each \$100 of the valuation of the town then counties may pay one-half the cost of the bridge.

Wisconsin: Towns build and maintain bridges but they can compel the county to pay 50% of the cost of any bridge costing over $\frac{1}{4}$ of 1% of the total assessed valuation of the town.

CONCLUSIONS.

We find that Vermont is the only state which has a law making it possible for a portion of the cost of construction or main-

tenance of a bridge to be *borne by the State*. It is also apparent that this law can only be invoked when the cost of the bridge will exceed a certain *rate of taxation* and that a special commission must be appointed to hear each case and decide whether or not the state shall pay aid. In Illinois *counties* may pay one-half the cost of a bridge when the same will exceed a certain *rate of taxation*, viz: 20c. on each \$100 of valuation of the town. In Wisconsin towns can compel the *county* to pay one-half the cost of any bridge whose cost exceeds a *certain rate of taxation*, viz: $\frac{1}{4}$ of 1% of the total assessed valuation of the town.

These three states seem to be the only ones which have fixed any definite law governing the aiding of towns in the construction of bridges.

The method fixed by the laws of these three states for determining when aid shall be paid seems to us to be extremely fair and equitable inasmuch as it places the poorest town and the wealthiest city on the same basis.

ABSTRACTS OF ALL LETTERS FROM STATES.

Believing that the correspondence received from the different states bearing upon this matter will prove interesting and instructive to all who care to make a thorough study of the question "What should be the State's policy in relation to the building and maintenance of bridges" we give herewith abstracts of such letters, including besides that part of the letter which shows the State's position on this matter, such opinion as has been volunteered on the general question. It will be noted that this question has been considered slightly by the State of Massachusetts and an opinion of the Massachusetts Highway Commission rendered to the Legislature in 1907 is given in full.

We also include with the Massachusetts correspondence copy of the "Parker River Bridge Act" which is the only law establishing a state bridge received in reply to our inquiries. It is so carefully drawn and appears to be so equitable in its provisions that it is printed in full as a guide for possible future legislation.

No particular arrangement of the correspondence has been attempted except that the letters have been grouped as to states in which towns build and maintain bridges; states in which

counties build and maintain bridges; states in which bridge jurisdiction has been learned by reference to their laws and notes on the same have been added to the letter received from the state. In the arrangement of the letters the name of the state is first given then the title of the official from whom the letter came.

*States in which towns build and maintain bridges.
Massachusetts, Secretary Highway Commission.*

"No investigation of this subject, to my knowledge has ever been undertaken in this State.

"The question you raise, namely, of putting the maintenance and reconstruction of highway bridges upon the State, was considered to a slight extent this year in Massachusetts. A precedent was established in 1906 by a bill relating to the Parker River Bridge, a copy of which I enclose. This year an attempt was made to turn over to the State another bridge between Lynn and Saugus. I enclose a copy of a letter written by the Commission to the Ways and Means Committee defining the attitude of the Commission on the Lynn-Saugus bridge and other bridges

"No general Massachusetts law, under which the State or County assumes any proportion of the cost of maintenance and reconstruction of highway bridges, has been passed. Each bridge is considered by itself."

The following extract is from the letter addressed by the Commission to the committee on Ways and Means of the Massachusetts Legislature in 1907 on the question of what should be the policy of the Commonwealth concerning all bridges.

"The Commission is of the opinion that a bridge, to all intents and purposes, is as much a part of a highway as any other details of its construction. Bridges of short span have frequently been taken by the Board as parts of State highways and reconstructed and repaired as was necessary, but bridges of long span have not been so taken, because of the great expense to which the State would be thereby committed. The Board believes that it has ample authority under the State highway laws to assume control of bridges of long span, but it has thus far been unwilling to take the responsibility without direct

authorization by the legislature, by a special act appropriating the money needed and apportioning the cost of the work.

“For the purpose of this discussion the bridges may be divided into three classes:

“First: *Those having State highways at both ends, either constructed or projected in the near future.*

“The Commission favors the taking of bridges of this kind, under legislation similar to the Parker River Bridge Act (Chap. 531, of the Acts of 1906), with the understanding that no part of the maintenance of any draw shall be paid by the Commonwealth.

“Second. *Those having a State highway at one end, with no prospective State road at the other end.*

“If a State highway is likely to be continued on the other side of a bridge of this kind, the Commission sees no reason why it should not be treated in the same manner as those in the first class; but if a State highway is not likely to be so continued, the Commission is of the opinion that such a bridge should not be taken charge of by the Commonwealth at the present time.

“Third: *Those having no State highway at either end, and there being no State highway contemplated in the immediate vicinity.*

“The Commission does not believe that bridges of this kind should be taken by the Commonwealth as a part of the State highway system at the present time.

* * * * *

“Your question as to how many bridges there are in the Commonwealth and how much it would cost to maintain them the Commission is unable to answer. To give a proper estimate of what would be involved in taking over all of the bridges would take many months of investigation and study.”

CHAPTER 531, ACTS OF 1906.

An Act to authorize the Massachusetts Highway Commission to repair, maintain and rebuild Parker River Bridge, so-called, in the town of Newbury.

Be it enacted, etc., as follows:

Section 1. The Massachusetts highway commission is hereby authorized and directed to lay out as a state highway the roadway and bridge over Parker river in the town of Newbury, on

the way locally known as High street, between the termini of the present state highway, and to maintain and keep in repair the said roadway, bridge and the approaches thereto. All expenses incidental thereto shall be paid out of the appropriations for the repair of state highways.

Section 2. If at any time the commission shall decide that public necessity and convenience require the rebuilding of said roadway, bridge and approaches, it shall, after full notice and a public hearing to all parties interested, prepare plans and make a careful estimate of the cost and expense of such rebuilding and report its findings to the general court. If the general court shall approve its findings and determine the proportionate amounts which the Commonwealth, the county of Essex, and such cities and towns as may be determined to be specially benefited should pay towards the cost of such rebuilding, and shall appropriate the Commonwealth's share therefor, the county of Essex and such cities and towns as may be determined to be specially benefited, as aforesaid, shall within such time and in such manner as the commission may direct pay into the treasury of the Commonwealth the proportionate amounts to be paid by them. The commission shall then within a reasonable time rebuild said roadway, bridge and approaches in accordance with the provisions of chapter forty-seven of the Revised Laws. The treasurer and receiver general shall pay from the sums appropriated and deposited in the treasury as aforesaid, on orders of the commission, such amounts as may be needed for the work. If after the completion of the work it appears that the total amount appropriated and deposited is in excess of the cost and expenses incurred the treasurer and receiver general shall pay back to said county and to such cities and towns as have been determined to be specially benefited their proportionate shares of the said excess, and the proportionate share of the Commonwealth of said excess shall revert to the treasury.

Section 3. In case any street railway or electric railroad company is granted a location upon the said bridge, it shall pay into the treasury of the Commonwealth as its part of the expense of rebuilding the bridge and the approaches thereto, a sum amounting to not less than ten per cent of the said expense, and shall also enter into an agreement with the Massachusetts highway commission to keep that part of the roadway on said bridge

lying between the tracks of the company and eighteen inches outside thereof on both sides of the track, in repair and safe for public travel; and no location shall be granted upon said bridge except upon the foregoing conditions. The treasurer and receiver general of the Commonwealth shall pay back to said county and to such cities and towns as have been determined to be specially benefited, their proportionate shares of such amount as has been paid under this act by any street railway or electric railroad company.

Section 4. The county of Essex and such cities and towns as have been determined to be specially benefited may borrow on the credit of the county and of such cities and towns, respectively, such sums of money as may be necessary to comply with the provisions of this act.

Section 5. This act shall take effect upon its passage.

(Approved June 28, 1906.)

New Hampshire, State Engineer.

"The State of New Hampshire has nothing to do with the bridges of the State except what few bridges are on the state roads, neither do any counties have to do with the maintenance of bridges except in one or two specific instances where the legislature has provided that the county shall maintain the bridge."

Vermont, State Highway Commissioner.

"Any town that is required to build, rebuild, or repair a highway or bridge wholly within said town and other towns in the vicinity are deemed to be benefited thereby, and the town is excessively burdened with taxes raising at least \$1.50 on a dollar of the grand list for the previous five years for town and road purposes, not including schools, the county court may appoint a commission on petition to inquire into the matter and if found as represented may assess the state not to exceed one-half the expense and the balance to the petitioning town."

Rhode Island, Clerk of State Highway Commission.

"The State Board of Public Roads have nothing to do with the highway bridges as our highway law does not allow us to build or repair bridges, they are taken care of by the towns in which they are located."

Connecticut, State Highway Commissioner.

"We have done nothing in regard to the subject matter that suggested your letter to me, namely, taking care of bridges. We have, however, paid a certain proportion of the abutment work upon all bridges on state roads about in the same proportion that we have paid for the construction of roads, leaving the superstructure entirely in the hands of the towns not only to construct, but also to keep in repair.

"We have a law here that has been on the statute books for a few years through which, on any bridge over which trolley cars are run—and said bridge is a draw bridge—the state pays \$500 a year to the town in which said bridge is located. I understand that this amount is to be increased to \$1,000 per year.

"Outside of this, nothing has been done statewide as to the care and maintenance of bridges."

In a subsequent letter the statement is made that the law says nothing about bridges but leaves the matter entirely to the discretion of the commissioner and that only a limited amount of work has been done upon a few of the smaller structures.

New York, Deputy State Engineer.

"I beg to state that in accordance with the provisions of the Highway Law under which we are operating, the State has no authority to construct any bridges, only culverts being provided for, and a ruling of this department fixes the maximum length of culverts at 15-ft. span. The maintenance of all culverts or bridges over five-ft. span are a fixed town charge."

Pennsylvania, Assistant Commissioner.

"No such investigation as described in your letter has been made in Pennsylvania. We have in this State three classes of bridges, but the distinguishing lines between the three classifications are very indefinite. The State has built a number of bridges across the larger rivers, such bridges having been built by the Department of Public Grounds and Buildings. The respective counties have built, and are maintaining, another class of bridges smaller in size, and the various townships build and maintain a still smaller class of structures. There has been no legislation upon the subject which specifies definitely the size of bridge to be covered in these various classifications. The County Commissioners of the various counties have it largely

in their own hands to determine whether or not they shall adopt a given bridge as a county bridge. This has led to very great differences in the manner of treating the situation. In some counties, all of the bridges are classed as township bridges, while in other counties bridges of no greater size are being cared for by the county.

“In the reconstruction of the public highways this Department is authorized to include as a portion of the highway any bridge which is being maintained at the expense of the township. This has given us a range of work from the smallest culverts up to bridges of 150 ft. span. These bridges after being constructed are maintained by the townships in which they are located.”

Wisconsin, State Geologist.

“The town or the city is the unit which ordinarily has complete control and pays all the cost of construction of bridges. As it stands at present, the law reads that towns or cities can compel the county to pay 50% of the cost of any bridge costing over $\frac{1}{4}$ of 1% of the total assessed valuation of the local unit.”

States in which counties build and maintain bridges.

Delaware, State Highway Commissioner.

“In this State the principal bridges are built and maintained by the county in which they are located. Also the road or causeway immediately adjacent to them. All bridges of lesser importance are cared for by their respective hundreds (townships). There is no law that I know of that determines who shall care for the bridge according to its size. There has never been in this State any investigation of the bridges such as you speak of.”

New Jersey, State Commissioner of Public Roads.

In this State all bridges within the State are built by the counties under the immediate direction and supervision of the Board of Chosen Freeholders and the State has no part in the construction of any bridges.”

Virginia, State Highway Commissioner.

“Under our Law all bridges are built and cared for by the counties in which they are located.”

Iowa, Highway Engineer.

"In our State all bridges over a certain length of span are built and maintained as county bridges. The length of span varies somewhat in the various counties, but the average length is 16 feet, a minimum of 12 feet and a maximum of 20 feet. All bridges under this length are designated as culverts and are built and kept in repair by the townships.

"Such a law as you suggest would be a very desirable one to have and I am of the opinion that standard loadings for bridges even less than 40 feet should be adopted by the State, and probably standard plans and specifications."

Kentucky, Secretary of State.

"Replying to your letter beg to say that no investigation of the character mentioned in your letter has been made in this State. We have no law apportioning the cost of highway bridges between the county and the State. The county does it all."

Minnesota, State Engineer.

"We have no law governing the construction or maintenance of our highway bridges. All such matters are in the hands of the County Commissioners and are conducted on the old hit or miss plan without any superintendence or system. Every two years the legislature divides up an appropriation among the different counties to spend about as they please. At the present session, now happily drawing to a close, they appropriated \$400,000 to be expended by the County Commissioners on the old plan.

"The Highway Commission of this State has a fund of \$55,000 this year and \$70,000 next year for state aid on roads and bridges of which not more than one-third of the cost is contributed by the State and only one-third of the fund is to be used for bridges."

Louisiana, Secretary of State.

"Relative to highways and highway bridges, I beg to say that no investigation on the subject has ever been undertaken in our State. There is no general law in our State whereby the State assumes any proportion of the cost of maintenance or reconstruction of highway bridges. In Louisiana highway bridges are constructed and maintained by the county authorities."

Kansas, Secretary of State.

"In reply I beg to state that I know of no investigation having been made in that direction. Our laws place the maintenance of highways with each county."

Wyoming, Secretary of State.

"We have no information as to the cost of construction of highways and bridges, these matters being under the supervision of the different counties."

Montana, Secretary of State.

"I will say that there has been no such an investigation as that mentioned in your letter, in this State. The counties assume the cost of bridges within their lines and I know of no state bridge in Montana."

New Mexico, Secretary.

"There is no public Highway Commission in New Mexico, but public roads are under the control of the County Commissioners of the various counties, who act through a county road overseer. In general, all bridges are constructed and maintained at county expense."

Utah, State Engineer.

"In Utah there is no general law whereby the State assumes any proportion of the cost of the maintenance or reconstruction of highway bridges.

"At each session of the legislature, state appropriations were made for highway purposes and frequently under these highway appropriations construction or reconstruction of a bridge is mentioned.

"The highway bridges practically without exception in this State have been built by the counties out of the general revenue levied by the County Commissioners for county purposes."

California, State Highway Commissioner.

"The State of California has not undertaken to maintain or reconstruct any of the highway bridges, but leaves that matter to the counties. However, I believe it would be a vast improvement and saving for the State to have charge of such construction."

States in which bridge jurisdiction has been learned by reference to their laws and notes on the same have been added to the letter received from the state.

Illinois, State Engineer. State Report for 1906.

"The law provides that a county may assist the townships or road districts in the construction of intertown or other important and large bridges which are of benefit to other than the residents of the town in which the bridge is located." From the Statutes of Illinois it appears that towns may apply to the county for such aid when the cost of any new bridge will exceed 20c. on each \$100 of valuation of the town and that a county may pay one-half the cost of such bridge.

Ohio, State Highway Commissioner.

"The matter of bridge building is not covered by the state highway law. In construction of roads under state aid all bridges and culverts costing over fifty dollars are constructed by the local authorities and only bridges of less cost are part of the contracts we let."

The general law is that towns take care of their roads and bridges.

Michigan, State Highway Commissioner.

"Similar information was called for two years ago but on account of incompleteness it was not published." Townships build and maintain bridges.

West Virginia, Secretary of State.

"We have no laws of any consequence in regard to this matter." Bridges are built and maintained by the counties.

Maryland, Chief Engineer Highway Division Geological Survey.

"No investigation such as you mention has been made in this State." Bridges are built and repaired at the expense of the county.

North Carolina, Secretary of Highway Commission.

"The question of bridges has not been separated in this State from that of highways." The counties handle all matters of this kind.

Mississippi, Commissioner of Agriculture and Commerce.

"No division of bridge expenses between the counties and the State has ever been tried in this State." The counties build and maintain roads and bridges.

Texas, Secretary of State.

"No investigation of this kind has ever been attempted in this State." Bridges are built and maintained by the counties.

No. Dakota, Secretary of State.

Bridges are built and maintained by the counties.

So. Dakota, Secretary of State.

Bridges are built and maintained by the counties.

Idaho, Governor.

"No investigation of this kind has ever been attempted in this State." Bridges are built and maintained by the counties.

Ontario, Commissioner of Highways.

"Our Act to Aid in the Improvement of Public highways provides for the payment of one-third of the cost of all work done in constructing and bringing up to a fixed standard, the leading roads in any county. The roads to be comprised in such a system have to be approved by this Department and declared to be leading roads. The work of bringing the roads to a standard, involves of course, the construction of sluices, culverts and bridges regardless of dimension or cost, and is included in the cost of the work, one-third being paid by the Government."

INVESTIGATION WITH TOWNS.

Blanks were then prepared and forwarded to each board of selectmen, the mayor of each city and to each board of county commissioners who have charge of roads in unincorporated townships, with circulars of explanation and instruction as to what was desired by way of information.

These blanks were issued about June 15 and from that time until the end of the year hardly a day passed that letters were not received and sent out pertaining to this investigation. A considerable amount of urging and coaxing was necessary to get information from some towns and this was done by general circular letters, several issues of these having been sent out, and in many cases by individual letters to the municipal officers. All who have furnished information are entitled to a share of credit, if any is due, for the completeness of the report. The only places which did not file reports are Fort Kent, Nobleboro and Buxton.

Information Asked For.

In general the following information was asked for upon blanks sent out.

Name of stream, river or other water crossed.

Type of bridge—through truss, girder, pile or frame trestle.

Wood, stone, concrete, iron, steel or combination.

Extreme length of bridge.

Width of roadway.

Width of sidewalks, if any.

Number of spans.

Number of piers.

Clear length of each span.

Known cost.

If cost not known give estimated cost.

Condition as to repairs.

When built.

Name of Builder.

Year rebuilt.

Year repaired.

In how many years should bridge be rebuilt?

In how many years should bridge be repaired?

If state gave aid towards first construction, how much?

Is bridge situated on designated state road?

If constructed and maintained by union of towns give fractional part borne by your town and names of other towns and fractional parts borne by each.

General Questions.

Number of bridges in town over six feet in length.

Number of toll bridges in town.

Amount appropriated by town for repair of bridges, year 1907, \$.

Amount expended by town for repair of bridges, three years prior to March, 1907. 1904, \$; 1905, \$; 1906, \$.

Amount appropriated for new bridges, at annual meeting, 1904, \$; 1905, \$; 1906, \$; 1907, \$.

Amount expended by town for repair of iron or steel bridges, 1904, \$; 1905, \$; 1906, \$.

Amount expended by town for repair of wooden bridges,
1904, \$; 1905, \$; 1906, \$.

Amount expended by town for repair of wooden bridges,
1907, \$.

Amount expended by town for repair of iron or steel bridges,
1907, \$.

Amount expended by town for repair of all bridges, 1907,
\$.

Amount expended by town for construction of new bridges,
1907, \$.

Results of Investigation.

We would have liked to have gone more into detail as to the physical condition of the several bridges and had reports show kind, cost and present condition of sub-structures and super-structures separate but felt that asking for more details than the inquiry blanks called for would only discourage many municipal officers from any attempt at filling out the blanks and would result in an incomplete and fragmentary report. We do not claim absolute accuracy for all figures of cost. They have been furnished for most part by municipal officers and an examination of the blanks shows that all have not interpreted our questions the same way. In some cases cost of super-structure alone is given; in others, cost of sub-structure and super-structure; and in others it is apparent that to these costs have been added the cost of grading approaches. On the whole we believe the figures will average up fairly well and that the totals are probably not over 10 or 15% more or less than the original cost of the bridges in the State. The total "known or estimated cost" shown in table I, viz: \$5,276,644.21 cannot be taken as an estimate of the cost of reproducing these bridges. A considerable number of letters have been received which made this or a similar statement. For example the commissioners of Cumberland county report a bridge costing \$25,000. They add that the bridge will have to be rebuilt in a few years and they think the cost will be at least \$150,000.

In the matter of maintenance cost, figures are not as full as could be desired. 353 towns, cities and plantations reporting bridges of a known or estimated cost of \$3,962,011.39 report a

maintenance cost for 1907 of \$99,340.77 or about 2½%. The maintenance cost of all bridges reported on the same basis would be \$131,916.10.

Furthermore, it should be noted that 248 towns, cities and plantations reporting bridges of a known or estimated cost of \$3,281,622.35 report an average maintenance cost for the years 1904, 1905 and 1906 of \$112,699.81 or about 3½%. The maintenance cost of all bridges reported on the same basis would be \$184,682.55.

We do not understand that the legislative order directed this office to do more than report results of this investigation. We have accordingly arranged the information secured in what seems to us the best form for reference and submit it without further comment.

SUMMARY OF TABLES II, III AND IV.

From the following tables it appears that there are in the State of Maine—

66 bridges over 400 feet in length reported to have cost	\$1,601,184.35
53 bridges between 300 and 400 feet in length reported to have cost	411,044.98
16 " " 275 " 300 " " " " " " " "	62,448.90
18 " " 250 " 275 " " " " " " " "	70,950.12
24 " " 225 " 250 " " " " " " " "	155,813.00
28 " " 200 " 225 " " " " " " " "	132,508.51
31 " " 175 " 200 " " " " " " " "	133,742.30
65 " " 150 " 175 " " " " " " " "	240,853.75
56 " " 125 " 150 " " " " " " " "	220,050.16
125 " " 100 " 125 " " " " " " " "	262,011.12
53 " " 90 " 100 " " " " " " " "	137,314.61

6,819 bridges total for the State at an estimate cost of

\$5,276,644.21

BRIDGE INFORMATION.

TABLE I—Showing number, kind, cost and, as far as reported, maintenance cost of all bridges in each town in the State, six feet and over in clear length.

NOTE: All towns reporting joint ownership of any bridge or bridges with another town or towns are marked * in this table, and reference must be made to tables II, III and IV to learn details of ownership. Each town's proportional part of the cost or maintenance expense of joint bridges is included so that in the grand total the cost of such bridges appears but once.

Town.	County.	Valuation.	Total number of bridges.	Estimated or known total cost.	Maintenance cost for 1907.	Average annual maintenance cost for three years prior to 1907.	STEEL BRIDGES			WOODEN BRIDGES.			STONE OR CONCRETE BRIDGES.

Totals for the State.

TABULAR STATEMENT SHOWING NUMBER AND
COST OF BRIDGES OVER CERTAIN LENGTHS.

EXPLANATORY NOTE: The 119 bridges over 300 feet in length includes the 66 bridges over 400 feet and the 53 bridges between 300 and 400 feet in length; the 135 bridges over 275 feet in length includes the 66 bridges over 400 feet, the 53 between 300 and 400 feet and the 16 between 275 and 300 feet, and so on through the table; similarly the last column shows cost of all bridges in excess of the length mentioned.

In referring to the table remember that 6,819 is the *total* number of bridges reported and that \$5,276,644.21 is the total reported cost of *all bridges* in the State.

66 bridges over 400 feet in length, reported to have cost										\$1,601,184.35
