In the cities the relation of the number of births to that of the deaths is conveniently shown in the following table, together with the birth-rate and the death-rate per 1,000 of the estimated population in each city. The discrepancy in the death-rate in the cities which may be noted in comparing this table with Table No. 6 is due to the fact that in this table the death-rates are based upon estimated populations, while in Table No. 6 the death-rates are per 1,000 of population as shown by the census of 1900.

## NOTES ON BIRTHS.

In the year 1909, 16,735 births were registered in the State, including stillbirths, (14,082 in 1892, 14,604 in 1893, 14,607 in 1894, 15,430 in 1895, 15,429 in 1896; 15,142 in 1897, 15,121 in 1898, 14,475 in 1899, 14,709 in 1900, 14,615 in 1901, 15,166 in 1902, 15,130 in 1903, 15,405 in 1904, 16,005 in 1905, 16,585 in 1906, 16,595 in 1907, and 16,914 in 1908).

The number of living children born was 16,060, and the number of stillbirths was 675.

Of the whole number of living children of which the sex was certified, 8,208 were males and 7,845 were females. In 7 births, the sex was not stated. For each 100 girls born there were 104.7 boys (106.7 in 1892, 107.4 in 1893, 104.7 in 1894, 106.4 in 1895, 105.3 in 1896, 102.3 in 1897, 106 in 1898, 104.4 in 1899, 103.2 in 1900, 105.6 in 1901, 105 in 1902, 105.3 in 1903, 104.2 in 1904, 104.1 in 1905, 106 in 1906, 104.3 in 1907, and 107.2 in 1908).

*Birth-rate.*—The birth-rate of living children for the State was 21.97 for each 1,000 of population.

Table No. 12 shows the number of births in each city with the birth-rate of each. The average birth-rate in the cities per 1,000 population was 20.93 as compared with 22.51 the birth-rate of the rest of the State.

The birth-rate of the different counties varied widely. As it invariably has been every year since the registration began, it was the highest in Aroostook, 33.54, and the lowest in Knox, 14.40. In four counties, Aroostook, Oxford, Penobscot, and York, the birth-rate was above that of the whole State. The birth-rate in each county is shown in Tables No. 3 and 7.

*Parentage.*—Of the total births in the State, 60.26 per cent. were of native parents, 20.39 per cent. were of foreign parentage; 18.18 per cent. were of parents one of whom was foreign; while in 1.17 per cent. the nationality was not stated.

Lincoln county had the largest percentage of native-born parents, to wit, 93.31 per cent., and only 1.27 per cent. in which both parents were foreign-born. Waldo followed with 91.80 per cent. of native parentage, and only 2.46 per cent. in which both parents were foreign-born.

In Hancock county in 87.84 per cent. of the births the parents were native-born, and in 3.92 per cent., foreign-born.

In Knox the percentage of native-born parents was 79.00; in Franklin, 71.77; in Piscataquis, 68.15; in Somerset, 66.53; in Sagadahoc, 66.39; and in Washington, 64.87.

Comparatively high percentages of foreign-born parents are found in Androscoggin county, 36.43; in York, 34.67; in Oxford, 29.28; in Cumberland, 25.59; and in Kennebec, 22.40.

The percentages of parentage, whether American-born or foreign-born, may be found for the other counties in Table No. 13.

Comparing the percentage of the births in our twenty cities with that of the rest of the State, we find that in the cities 43.88 per cent. of the births were of American parentage, while in the rural parts of the State the percentage of American-born children was 68.09.

The largest percentage of foreign-born parents was in Biddeford, 60.55; and in Lewiston 49.33.

In Ellsworth the percentage of births in which both parents were foreign-born was only 1.69; and in Belfast the percentage of such births was 2.53. For further comparisons see Table No. 14.

*Seasons and Births:*—The largest number of births in any one month in 1909 was 1,475 in March; the smallest was 1,221 in November; the largest quarterly total was 4,154 in the second quarter; the smallest, 3,705 in the last quarter. The three consecutive months in which the largest number of births occurred were March, April, and May, 4,320.

The following is a tabular statement of the number of births in each month of the eighteen years 1892-1909:

## NOTES ON MARRIAGES.

The number of marriages registered in the State during the year 1909 was 6,011 (5,726 in 1892, 5,795 in 1893, 5,594 in 1894, 5,729 in 1895, 5,579 in 1896, 5,331 in 1897, 5,144 in 1898, 5,329 in 1899, 5,482 in 1900, 5,735 in 1901, 5,905 in 1902, 6,200 in 1903, 6,208 in 1904, 6,264 in 1905, 6,498 in 1906, 6,380 in 1907, and 5,904 in 1908). We have therefore for the year 1909, a marriage-rate of 16.44 (persons married) to every 1,000 of population, or at the rate of 8.22 marriages per 1,000 persons.

*Marriage-rates*:—The marriage-rate was higher in Oxford county than elsewhere in the State, it being for that county 9.64 per 1,000. The lowest marriage-rate, that of 6.58 per 1,000, was in Sagadahoc county. See Table No. 3.

*Nativity*:—Of the 5,991 records of marriage in which there was a statement of birthplace, in 73 per cent. the groom and bride were both American; in 10 per cent. both were of foreign birth; in 8 per cent. the groom was American and the bride of foreign birth; while in 9 per cent. a foreign groom and American bride were united.

*Seasons*:—The largest number of marriages, 789, was solemnized in June, while the smallest number in any one month, 286, occurred in March. See Table No. 21.

*Ages of the Married*:—The largest number, both of grooms and brides, was between 20 and 25 years of age. ## NOTES ON DEATHS AND THE CAUSES OF DEATHS.

The number of deaths registered in the year 1909 was 11,295. This was 369 less than for the preceding year, 1908. A glance at the following tabulation will show that the death-rate, based upon the estimated population of all but the census year, 1900, has gradually lessened until 1907, when it was the same as in 1894, while this year it was only 15.45.

By referring to Table No. 3, it will be seen that the lowest death-rate was in Aroostook county, being only 13.08. The counties Androscoggin, Aroostook, Franklin, Hancock, Knox, Lincoln, Piscataquis, Sagadahoc, Somerset, and Washington had lower death-rates than that of the whole State; while the counties Cumberland, Kennebec, Oxford, Penobscot, Waldo, and

York had death-rates larger than that of the State. The highest county death-rate was that of Kennebec, 17.83.

The death rate in the cities was 16.63 (20.46 in 1892, 19.89 in 1893, 19.65 in 1894, 18.36 in 1895, 18.78 in 1896, 20.11 in 1897, 19.74 in 1898, 18.10 in 1899, 18.34 in 1900, 17.90 in 1901, 17.03 in 1902, 17.16 in 1903, 18.00 in 1904, 16.79 in 1905, 17.25 in 1906, 18.18 in 1907, and 17.03 in 1908), as compared with that of the rest of the State with the cities omitted, which death-rate was 14.85 (17.46 in 1892, 15.54 in 1893, 15.39 in 1894, 14.77 in 1895, 14.93 in 1896, 15.68 in 1897, 15.24 in 1898, 15.52 in 1899, 15.47 in 1900, 15.13 in 1901, 14.58 in 1902, 13.39 in 1903, 15.54 in 1904, 15.49 in 1905, 14.71 in 1906, 15.60 in 1907, and 15.54 in 1908).

*Seasons and Mortality.*—The largest number of deaths occurred in March, 1,178. The smallest number of deaths in any one month was 831 in July. During the spring months 3,160 deaths occurred; during the summer, 2,555; during the autumn, 2,763; in the winter, 2,817. Table No. 28 exhibits the total number of deaths which occurred in each month of the years 1902-1909. The number of deaths for 1909 in each month by counties is shown in Table No. 34.

*Sex and Mortality.*—Of the 11,295 decedents, 5,743 were males and 5,551 were females. The sex of one was unstated.

Among children dying before they were 5 years old, 1,239 were males and 988 were females; there were 251 more deaths among boys under 5 years of age than among girls within the same age-period. On the contrary, at the age-periods from 5 to 50 years, there was a preponderance of deaths among females, while there were more deaths among males at the ages from 50 to 80, and from 80 to 100, more among females. At the age of 100 years and over two women died. See Table No. 34.

*Age and Mortality.*—The following shows the number of deaths which occurred within each age-period, and the relation which the percentage in each period bears to the whole number of deaths:

Under 1 year of age	1,694	15.00 per cent.
From 1-5 years of age	534	4.73 per cent.
From 5-10 years of age	208	1.84 per cent.
From 10-20 years of age	409	3.62 per cent.

100 years of age and over	2	0.02 per cent.
Ages not stated	36	0.32 per cent.

*The Causes of Death.*—Compared with 1908, among the chief causes of death there were in 1909, 60 more from bronchitis, 52 more from pneumonia, 46 more from diseases of heart, 17 more from cancer, 15 more from measles, 15 more from scarlet fever, 13 more from diabetes, and 7 more from diphtheria and croup.

On the other hand there was a smaller number of deaths from the following causes; from diarrheal diseases, 229 fewer, from

tuberculosis, 86; from diseases of nervous system, 81; from influenza, 71; from typhoid fever, 41; from whooping cough, 22; from nephritis and Bright's disease, 12; from peritonitis, 5, and from rheumatism, 2.

The next table gives a cursory view of the relative mortality in 1908 and 1909 from some of the leading causes of death.

The following table shows the mortality from ten prominent causes in the eighteen years 1892-1909. The various diseases of the brain have occupied the first place among the causes of death, except in 1892, when pneumonia had the first place, and consumption was the next most prominent cause until 1898 when it was reduced to the third place in the list; and in 1899 and 1900 it occupied the fourth place; in 1901, the third place; in 1902, 1903, 1904, 1905, 1906, 1907, and 1908 it occupied the fourth place, which it still keeps this year. Diseases of the heart have the second place, and pneumonia has the third place.

*Typhoid Fever.*—There were 110 deaths from typhoid fever. Of these, 57 were males and 53 were females. As indicative of the loss which the State incurs from typhoid fever, it is well to bear in mind that the age distribution of the decedents shows that the deaths from this disease are principally among those active and productive age-periods when human life is of the most value; 80 per cent. died between 10 and 50 years of age.

Ages: 1-5, 5; 5-10, 7; 10-20, 22; 20-30, 27; 30-40, 24; 40-50, 13; 50-60, 6; 60-70, 3; 70-80, 3.

The largest number of deaths, 22, occurred in October, and the smallest number, 4, in May and June respectively. By quarters, 26 were in the first quarter, 15 in the second, 23 in the third, and 46 in the last quarter of the year.

The typhoid death-rate of 1.93 in the cities is much greater than that in the villages and rural towns, which is 1.28. The rate for the State is 1.51.

The following exhibits the number of deaths from typhoid fever in each county, by months, with death-rate in each county:

*Cerebral Tuberculosis.*—(Tubercular Meningitis.)—The number of deaths was 100; 45 were of males and 55 of females.

The number for the cities was 49. The death-rate for the State was 1.37; for the cities, 1.97.

Ages: Under 1, 26; 1-5, 35; 5-10, 7; 10-20, 12; 20-30, 9; 30-40, 2; 40-50, 4; 50-60, 4; over 60, 1.

*Pulmonary Tuberculosis.*—(Consumption.)—From this cause 830 deaths were registered in 1909, which is equivalent to a death-rate of 11.36 per 10,000 of population. The death-rate for the cities was 13.18. The following is a tabular arrangement of the number of deaths in the State from pulmonary tuberculosis in each of the eighteen registration years, together with the death-rate from consumption for each year:

There were in 1909, 522 fewer deaths than in 1892, 469 fewer than in 1893, 432 fewer than in 1894, 365 fewer than in 1895, 342 fewer than in 1896, 298 fewer than in 1897, 191 fewer than in 1898, 185 fewer than in 1899, 197 fewer than in 1900, 203 fewer than in 1901, 140 fewer than in 1902, 71 fewer than in 1903, 186 fewer than in 1904, 64 fewer than in 1905, 85 fewer than in 1906, 120 fewer than in 1907, and 63 fewer than in 1908.

Ages: Under 1, 15; 1-5, 10; 5-10, 3; 10-20, 98; 20-30, 214; 30-40, 168; 40-50, 98; 50-60, 85; 60-70, 77; 70-80, 50; 80 and over, 11, and not stated, 1.

It is thus shown in this report, as it was in the majority of the preceding reports, that the smallest number of deaths occurred at the age-period 5-10 years, and that, of the decedents whose ages were given, 70 per cent. died at those ages when their deaths entailed the greatest loss to the State.

As to the sex, 378 of the decedents, or 45.5 per cent., were males; and 452, or 54.5 per cent., were females.

The following table shows the number of deaths in each county by months, with the death-rate from consumption in each county:

*Diabetes.*—The deaths from this cause numbered 129 (55 in 1892, 65 in 1893, 71 in 1894, 77 in 1895, 67 in 1896, 95 in 1897, 88 in 1898, 95 in 1899, 74 in 1900, 87 in 1901, 83 in 1902, 92 in 1903, 91 in 1904, 115 in 1905, 121 in 1906, 107 in 1907, and 116 in 1908). The special death-rate from diabetes was, therefore, 1.77 in 1909. Sixty-four of the decedents were males and 65 were females.

Ages: 1-5, 2; 5-10, 5; 10-20, 7; 20-30, 4; 30-40, 3; 40-50, 11; 50-60, 18; 60-70, 43; 70-80, 31; 80-90, 4; over 90, 1.

*Old Age.*—There were registered 517 deaths as due to old age, 202 men and 315 women. Of these decedents, 140 were from 70 to 80 years of age; 281 were from 80 to 90; 95 were from 90 to 100; while 1 was over 100 years of age.

From Table No. 34, however, it will be seen that the whole number of persons who died at the ages between 70 and 100 years or more was 3,661 (3,801 in 1892, 3,147 in 1893, 3,242 in 1894, 2,897 in 1895, 3,045 in 1896, 3,232 in 1897, 3,109 in 1898, 3,378 in 1899, 3,355 in 1900, 3,332 in 1901, 3,289 in 1902, 3,404 in 1903, 3,532 in 1904, 3,611 in 1905, 3,292 in 1906, 3,731 in 1907, and 3,636 in 1908), or one death in every three and one-fifth was of a person who was between 70 and 100 years of age or older. Assuming that all these 3,661 died of old age, the death-rate from old age would be 50.09 among every 10,000 living at all ages.

The following shows the number of deaths in each county of persons 70 years of age and over, and the death-rate per 10,000 of the population at all ages.

Of these, 243 were in the cities. The State's death-rate from apoplexy was, therefore, 11.18; that of the cities, 9.79.

The largest number of deaths from apoplexy, 228, occurred in the spring; the largest number in any one month was 88 in May.

In 1894, 1896, 1900, 1905, 1906, 1908, and 1909, the greatest mortality from this cause occurred in the spring; in 1892, 1893, 1895, 1897, 1899, 1901, 1903, 1904, and 1907, in the winter; in 1898, in the winter and spring; and in 1902, in the summer.

Conversely, the smallest number of deaths, 53, was in August; the smallest number in any one season was 202 in the fall months. Over 77 per cent. of the deaths were of persons 60 years of age and upward.

*Bronchitis*.—From this cause, including both acute and chronic bronchitis, 214 deaths were registered (287 in 1892, 197 in 1893, 209 in 1894, 225 in 1895, 220 in 1896, 237 in 1897, 210 in 1898, 233 in 1899, 262 in 1900, 222 in 1901, 241 in 1902, 209 in 1903, 223 in 1904, 218 in 1905, 187 in 1906, 190 in 1907, and 154 in 1908). Among these decedents, 91 were males and 123 were females. Of these 214 deaths, 61 were in the cities. The largest number of deaths in any one month was 28 in March. In July and September each occurred the smallest number of deaths, 7. The largest number of deaths in three consecutive months was 72 in January, February and March; the smallest number in any three consecutive months was 25 in July, August and September. The number of deaths by quarters was 72, 70, 25, and 47.

The bronchitis death-rate of the State was 2.92; of the cities, 2.45.

The following shows the age distribution of the decedents from this disease; it will be noticed that there was a great fatality at either extreme of life.
