Miss SARA FERRAN, Night Supervisor.

REPORT OF THE TRUSTEES OF THE MAINE
INSANE HOSPITAL AT AUGUSTA
AND
EASTERN MAINE INSANE HOSPITAL AT BANGOR.

To the Governor and Council of the State of Maine:

The Trustees of the Maine Insane Hospital at Augusta, and the Eastern Maine Insane Hospital at Bangor, submit their annual report for the year ending November 30, 1911.

Four of the Board entered upon their duties July 1st, 1911, and, were, therefore, entirely unacquainted with the details of the institutions. Each hospital has been visited regularly, as the law requires, and careful inspection made of all departments. In the summer Chase Island was visited by nearly all the Trustees.

THE MAINE INSANE HOSPITAL.

In the examination of the Maine Insane Hospital at Augusta, while each Trustee gave more or less attention to all departments, sub-committees were given specific duties, so that more time could be spent on certain departments, and reports made to the whole Board.

Within a few years the treatment of the insane has materially changed. The Hospital, instead of being for the custody and care of patients, contemplates more individual treatment of disease with reference to cure. To this end, patients are given much more freedom, both as to open air and manual labor, when physically able.

This plan has been of great value, and is found to be agreeable to a large class of the inmates, many of whom beg the privilege of working in the laundry, kitchen, bakery, sewing-

rooms, and the various occupations about the farm. This gives them diversion in a normal manner, and tends to break up the constant intro-spection and self-concentration, so common among this class of patients. To successfully minister to a "mind diseased," a gradual return to normal occupations and amusements, is found to be the true method. Drugs play a very unimportant part in restoration to health. This systematic course has been productive of most beneficial results, while it has been of great advantage to the various departments of the Hospital in the saving of paid employees.

All methods of physical restraint are absolutely abolished, and no cases, however violent, have failed to yield to the milder treatment. The members of the Board feel justified in saying that, so far as the whole Medical Staff is concerned, they are earnestly and faithfully doing the best and most approved work, for the comfort and happiness of this unfortunate class of patients.

The criminal insane are given more liberty to mingle with each other, apparently to the benefit of all concerned, especially as regards the health of the inmates. In fact, this may be said of all classes of patients in the various institutions, for very little illness, of an acute character, has occurred during the year.

Some changes have taken place in the officers and employees, by resignation, and otherwise, but most of the places have been satisfactorily filled. Others will be filled as soon as suitable parties are found to the satisfaction of the Board.

The new laboratory adds much to the more careful study of cases, both clinically and pathologically, and serves especially as a means of teaching the younger members of the Medical Staff, and contributing materially to a more scientific investigation of mental maladies.

The new dining room, for attendants and nurses, is a decided improvement, both as to economy of time and material.

As appropriations are available, some of the wards need renovating, in the interest of good sanitation and general comfort of the inmates.

It seemed best to the special committee on the farm that a number of the cows should be killed for beef, and new ones

purchased, as the cost of keeping good ones is no more than for those that are old, disabled, and past their usefulness. Some changes seem advisable in the conduct of the farm, and these will be brought about in the course of another season.

The cost of lighting this institution is more than three times as much (per kilowatt per hour) than at the Eastern Maine Insane Hospital. A proper foundation for installing a lighting plant now exists. The Board believes that we should at the earliest date possible proceed to install such plant. It will be in the interest of economy.

EASTERN MAINE INSANE HOSPITAL.

The Eastern Maine Insane Hospital at Bangor has opened a new building within the last year, which has added much to the comfort of the patients, and to the advantage of all concerned. Its construction, in a sanitary point of view, leaves very little to be desired, being modern in all respects.

A new, and much enlarged pump is now being installed in a well, which promises an unfailing supply of the purest water. This will add very much to the present supply, which will tend to reduce, materially, the amount purchased from the city.

From a series of experiments made the past year, we have returned to our former mode of electric lighting, being satisfied that it can be done considerably less than by purchase from the Bangor system, and it also is of better quality.

Some changes have also taken place among the officers and employees of the Eastern Maine Insane Hospital. Upon the resignation of Dr. Chalmers (the woman physician), to take effect January 15th, 1912, it has been decided to reduce the staff from five to four physicians. It has also been possible, by some re-arrangements of patients, to dispense with several nurses and attendants, resulting in a considerable reduction of expense.

Formerly the Hospital employed a steward and treasurer, at a cost of \$1800 per year. The Trustees decided, in the interest of economy, to combine the two offices in one man. The Treasurer has been paid \$300 per year, and the Steward \$1500. Mr. Somers (the steward) was willing to assume the duties of both offices at a salary of \$1600, thus saving to the State \$200. The Trustees accepted that offer.

By the several changes thus made, the Hospital has saved the State about twenty-three hundred dollars (\$2300).

The Tuberculosis Ward is well adapted to its purpose, and fair results have thus far been obtained. The Medical Staff are all entitled to much credit for the faithful and efficient service given in this ward, as well as in all other departments.

All of which is respectfully submitted.

REPORT OF BUILDING COMMITTEE, 1910.

RENOVATION OF KITCHEN AND BAKERY AND
ERECTION OF DINING ROOM FOR EMPLOYEES.

AUGUSTA, MAINE, NOVEMBER 30, 1911.

To the Trustees of the Maine Insane Hospital:

GENTLEMEN:—In accordance with the resolve approved March 16, 1909, (see chapter 171, laws of 1909, page 1300.)

Resolved, that there be and is hereby appropriated the sum of twenty-eight thousand dollars for the year nineteen hundred and nine, for the use of the Maine Insane Hospital, for the following purposes:

For the renovation of kitchen, bakery, and the erection of a dining room for employees, finishing and furnishing the same.

Said sum to be expended under the direction of the trustees of insane hospitals.

We herewith submit our report of cash received on account of the appropriation and disbursements for the year ending November 30, 1911.

1911.	RECEIPTS.		
	To cash from State Treasurer, during the year ending November 30, 1911.....	-	\$11,453 21
1911.	DISBURSEMENTS.		
	Paid Coombs Bros. Architects for plans, specifications, etc.....	\$608 24	
	Paid R. J. Noyes, contractor.....	10,844 97	\$11,453 21

Respectfully submitted,

GEO. E. MACOMBER,

LAURA L. CONY,

THOMAS WHITE,

A. R. NICKERSON,

Building Committee.

SUPERINTENDENT'S REPORT.

To the Maine Hospital Trustees:

In accordance with the statutory regulations, I have the honor to submit herewith the seventy-first annual report of the Superintendent of the Maine Insane Hospital for the year ended November 30, 1911.

The following table shows in concise form the statistical facts relative to the movement of the population.

	Men.	Women.	Total.
Patients in hospital November 30, 1910.....	507	395	902
Admitted within the year.....	165	142	307
Viz: by commitment.....	142	129	271
for observation.....	3	-	3
by transfer.....	-	-	-
from visit.....	2	1	3
from escape.....	-	-	-
Nominal admissions for discharge.....	18	12	30
Viz: from visit.....	18	12	30
from escape.....	-	-	-
Whole number of cases within the year.....	672	537	1,209
Dismissals within the year.....	209	128	337
Viz: discharged.....	64	42	106
as recovered.....	31	27	58
as capable of self-support.....	12	6	18
as improved.....	12	7	19
as not improved.....	6	2	8
as not insane.....	3	-	3
died.....	66	64	130
transferred.....	59	5	64
escaped.....	6	-	6
on trial visit, December 1, 1911.....	14	17	31
Patients remaining November 30, 1911.....	463	409	872
Viz: supported as State patients.....	381	319	700
in full by relatives.....	41	46	87
in part by relatives.....	35	33	68
as private patients.....	6	11	17
Number of different persons within the year.....	671	537	1,208
Number of different persons admitted.....	164	142	306
Number of different persons admitted by commitment.....	142	129	271
Number of different persons dismissed.....	209	128	337
Number of persons recovered.....	31	27	58
Number of persons discharged capable of self-support.....	12	6	18
Daily average number of patients.....	473	406	879

ADMISSIONS.

Two hundred and seventy-one patients were admitted by commitment, three men were sent by order of the court for

observation, three patients on trial visit at the end of last year were returned for further treatment and thirty patients on trial visit were nominally admitted for discharge, making in all three hundred and seven admissions.

The daily average population has been 879 compared with 890 for the previous year. There were remaining at the end of the hospital year 872 patients; 463 men and 409 women, 30 less than at the beginning of the year. It should be noted that 59 men and 5 women were transferred to the hospital at Bangor during the year, thus explaining the abnormal decrease in population. The smallest number under treatment on any one day was 857, the largest 922.

A reference to table number 9 showing the probable duration of insanity before admission presents the striking fact that in only 45% of our patients was the insanity of less than six months duration. This fact emphasizes the importance of the necessity of the education of the public as to the nature of a hospital for the insane. I am convinced from my experience that the majority of patients in the early stages of mental disease are deprived of a possible restoration to normal mental health on account of the reluctance of the relatives to send a patient to an institution maintained for the purpose of treating mental diseases. There may be many reasons given for this delay, but upon analysis we find them based largely upon ignorance of the actual conditions existing in our insane hospitals of the present day. Hence the pressing need of popular education.

Of the 271 new commitments 198 were never before in any hospital for the insane; 217 were admitted here for the first time. Three men were committed by the courts for observation of which two were discharged as not insane. The nativity table shows that 26% of the men and 20% of the women committed were of foreign birth. Sixty-nine percent of the men committed and 73% of the women were born in the State of Maine.

The classification of the cases admitted during the year according to the forms of mental disease with which they were affected is presented in tabular form with the tables of medical statistics. A hereditary taint was found in 49 men and 41 women, a percentage of 33.2 of original commitments. Other

etiological factors standing out prominently in the cause of insanity in our patients committed are syphilis, which was found to be a cause in 32 cases; arteriosclerosis in 24; congenital defect in 20.

DISCHARGES AND DEATHS.

The number of patients discharged during the year, excluding those who died or were transferred was 106, 64 of whom were men and 42 were women. Included in this number are those who were discharged at the expiration of the six months trial visit. Thirty-one are now on trial visit. Thirty-three were on trial visit at the end of last year and of these but three returned for further treatment.

	Percent.
Recoveries on number admitted.....	18.8
Recoveries on number discharged exclusive of transfers and deaths	54.7

The six months' parole law is working most satisfactorily and is more and more appreciated by patients and their relatives.

The number of patients who died during the year was 130 of whom 66 were men and 64 were women. The percentage of deaths calculated on the total number who received treatment during the year was 10.7 compared with 9.5 last year. A number of patients were received in the final stages of a fatal illness, twenty-two of our patients dying within one month after admission. The practice of committing a dying patient is to be deplored. Sixty-five or one-half of the total number of deaths were over sixty years of age at the time of death.

CRIMINAL INSANE.

At the beginning of the year 34 men were under treatment in the criminal insane building. One patient was admitted, four discharged, 2 died, 3 were transferred to the other parts of the hospital in accordance with the provision of the law, enacted at the last session of the legislature, permitting such transfer at the expiration of the prison sentence. Twenty-six remain under treatment.

The patients in this department are allowed the privilege of congregating in the day room on the upper and lower floors, where the supervision is constant and the more extended liberty has a beneficial effect upon the patients both mentally and physically. Our greatest need in this department is an airing court where the patients can have the full advantage of fresh air and sunshine, the necessity for which has been elaborated in a previous report.

A broom making outfit and a hand knitting machine has been secured and it is our purpose to operate these machines in the day room in the middle ward, thus giving employment to those patients able to take up the work.

MEDICAL ADMINISTRATION.

A table showing physical conditions among the patients which required special medical and nursing attention during the year is found elsewhere.

The staff conferences have been held as usual three times a week. At these conferences of the Superintendent and the Medical Staff new admissions and cases under consideration for trial visit or discharge are discussed. During the year 503 cases have been brought into the staff conference. Two hundred and fifty-one were presented for diagnosis, 128 for trial visit or discharge and 124 for final diagnosis (deaths). The clinical records are now carefully compiled according to a uniform method of examination and each case record is of distinct scientific value. The medical records of all patients in the hospital are now in individual case envelopes.

We have been singularly free from infectious diseases, no epidemic having occurred during the year. In February six men and five women suffering from pulmonary tuberculosis were transferred to the Eastern Maine Insane Hospital for treatment in the tubercular ward there. Such segregation has undoubtedly served to minimize the amount of tubercular infection in this hospital.

The rooms designed for the clinical and pathological laboratory have been completed and are awaiting the necessary equipment.

Dr. Hall reports the following work done in the clinical laboratory:

Sputa examinations	22
Positive for tubercle bacilli	14
Urinary analyses	246
Cerebro-spinal fluid examinations.....	3
Chemical examinations of gastric content.....	2
Blood examinations	17

Fourteen post-mortem examinations were conducted. It is to be hoped that this number will be increased the coming year with the improvement in our facilities for carrying out the necessary histological technique.

The following contributions by members of the hospital staff have been presented during the year:

Before the Maine Medical Association—"Report of a case of Pellagra" by Dr. H. W. Miller, Superintendent.

Before the New England Society of Psychiatry at Providence, R. I.—"Heredity in Dementia Præcox" by Dr. H. W. Miller, Superintendent.

Before the Kennebec County Medical Association—"Modern Psychiatry" by Dr. H. W. Miller, Superintendent.

Before the Augusta Medical Club—"General Paralysis" by Dr. Karl B. Sturgis, Assistant Physician.

Before the Augusta Medical Club—"Treatment of Insanity" by Dr. M. W. H. Pitman, Assistant Physician.

DENTAL WORK.

Dr. Dolliver, the visiting dentist, reports the following work accomplished in his department:

Patients examined as admitted.....	340
Teeth and roots extracted	313
Teeth filled	257
Teeth treated	24
Mouths cleaned, (tartar removed)	21

The mouths of old patients have been examined at regular intervals during the year and I find them in a far healthier condition than previous to the work of this department. This is due to the extraction of badly decayed teeth and abscessed roots and putting the mouth in as cleanly state as possible.

TRAINING SCHOOL FOR NURSES.

The training school for nurses has been carried on in conformity with the plans outlined in last year's report. An additional course of two lectures has been given this year to all attendants as well as the pupils of the training school. These lectures were for the purpose of giving those who had direct care of the patients a general idea of their relationship to the patients, their duties and responsibilities, and to enable them to interpret more intelligently and sympathetically the various manifestations of abnormal mental action with which they came in contact. The following members of the class of 1911 are to receive their diplomas at the graduating exercises next month: Gertrude G. Curran, Pauline W. Doe, Jean A. McDonald, Anna R. McLaughlin, Mary A. Ormond and Mae Violet Prescott.

The number of attendants has been materially reduced so that the relative proportion of nurses and attendants to patients is now upon a normal basis. Exclusive of our criminal insane department, where a full force of six attendants is required for our present population of 26 patients, our full quota of supervisors, nurses and attendants is as follows:

	Men.	Women.	Total.
Number of supervisors, nurses and attendants	48	51	99
Number of day supervisors, nurses and attendants	39	42	81
Ratio of day nursing force to patients		-	1 to 10.86
Number of night nurses and attendants	9	9	18
Ratio of night nurses and attendants to patients		-	1 to 48.8

Miss Jennie M. Smith, a graduate of an insane hospital training school and also of a general hospital who has had much experience in hospital work, was appointed Superintendent of the Training School and entered upon her duties in January.

ACTIVITIES OF PATIENTS.

Elsewhere is found a list showing the various articles of clothing, etc., made and repaired by our women patients. This by no means represents the sum total of results in the industrial employment of our women. A concerted effort has been made to take advantage of the beneficial effects of industrial treatment and the spirit of coöperation on the part of the patients on the one hand and the officials and employees on the other

has made itself manifest in an unmistakable manner. The improvement in the mental condition of certain patients and the atmosphere of contentment and cheerfulness radiating from actively employed patients is surely sufficient justification for further extending our industrial activities. An employed patient is less troublesome, more tidy and much more easily cared for than the patient who has no outlet for his superfluous energy except by manifesting destructive and mischievous tendencies. It is gratifying to note that those in charge of the working of patients in the various departments of the hospital have, with but few exceptions, grasped the important principle that employment is given to the patient on account of the benefit to that patient, the product of labor being of secondary consideration.

We have endeavored to interest patients in work as soon after admission as they are physically and mentally able to take up work. It has been well said by a writer of industries in insane hospitals that "industries as an important form of treatment belong more to the acute hospital,—to prevent patients becoming pauperized institutionally, rather than to stimulate them after they have become so."

We have already done something toward awakening the activities of the more demented patients and new forms of utilitarian occupations are being introduced for this purpose.

Our records show 60% of our patients engaged in some occupation.

The diversified nature of the work and the number employed is shown by the following report for September:

	Men.	Women.	Total.
Laundry	26	Sewing on wards 71	
In kitchen and bakery	25	Laundry 13	
Farm	22	Kitchen and bakery 3	
Vegetable garden	19	General housework 12	
Grounds	20	Clerical work 3	
Barn, stable and piggery	14	Sewing and mending-room 9	
Wards and ward dining-rooms	186	Wards and ward dining-rooms 88	
With carpenters, upholster and other workshops	17		
Total	329	199	528

The customary entertainments have been provided during the year. Weekly dances have been held on Thursday evenings. One other evening each week from November to May has been set aside for concerts or entertainments upon the convalescent wards. A masque ball given by the employees and patients was a source of much enjoyment to all.

The hospital band gave excellent concerts on the lawns twice a week during the summer months.

The usual number of patients enjoyed the outing at our summer home at Chase Island in Penobscot Bay.

Chapel services have been held on Sunday afternoons, except during July and August. A service for Roman Catholics has been held Sunday mornings once a month.

REPAIRS AND IMPROVEMENTS.

The new dining room in connection with the kitchen extension has been completed and is most satisfactory. Besides serving as a dining room for those employed outside of the wards, it gives dining room facilities for our nurses and attendants to enjoy their meals which they were formerly obliged to eat while on duty on the ward.

The new kitchen, bakery and storage plant are amply fulfilling all expectations.

Owing to the crowded conditions on the women's side it became necessary to utilize for the women patients, the two upper Harlow wards, occupied by men. These wards were put in good condition and now provide for sixty-seven women patients.

As the result of this change and by placing two beds in certain rooms in the Sanborn and Harlow buildings, we were enabled to relieve the congestion on the third wing of the stone building which was dangerously overcrowded, entirely eliminating the sleep out cots in the Sanborn building and very materially reduce the sleepout cots in the Stone building.

The Middle Pavilion ward on the male side was renovated throughout to serve as a private ward. The capacity of the Lower Male Pavilion ward which was formerly used as a private ward has been increased so that it provides for twenty

working patients. It has also been made an open ward much to the satisfaction and enjoyment of the patients therein.

The ordinary repairs throughout the wards and other buildings have been kept up. The old sheds at the piggery have been torn down and replaced by ten modern pens. Two other out-buildings at the piggery were remodelled and placed in good repair.

One of the small barns was practically rebuilt.

A new boiler at the central plant was placed in position and the brick walls on the other boilers repaired, so that all the boilers are in excellent condition.

Owing to the filling in of the ship bed at the coal wharf it became necessary to employ divers to deepen the channel, which had been a source of danger to the coal barges docking at our wharf. We hope by this provision to be free from the possibility of damage expenses for which we were liable.

A new telephone system has been installed by the New England Telephone Company. This was demanded on account of the failure of the old system to meet modern requirements. All parts of the hospital where patients are quartered are now in connection with the central switchboard at the administration building. The new system was installed without cost to us. Our contract calls for a yearly rental of \$297.00 for central switch board, ringing circuit, lighting circuit and 30 sub-stations with two trunk lines to the city. Our previous contract called for the payment of \$158.00 per year with four stations.

The above repairs and improvements have been paid for out of the maintenance appropriations. Rigid economy was enforced in all departments, so that the expenditure has not exceeded the appropriation.

COST OF MAINTENANCE.

Average weekly per capita cost, including all expenditures	\$5 50
Deduct average weekly per capita income from all sources	\$1 60
Average weekly per capita cost to State for support of patients and maintenance of property for year 1911	\$3 90

RESIDENT OFFICERS.

Dr. Annette Bennett, women physician, resigned her position in April, 1911. Dr. Marie C. Strom was appointed a medical interne July 1st. Dr. M. W. H. Pitman resigned his posi-

tion Nov. 25th to take up the practice of medicine in Bowdoinham. Miss Alice Twitchell, Matron, resigned November 30, 1911.

ACKNOWLEDGMENTS.

The members of the visiting committee from the Governor and Council have made frequent visits of inspection and have taken a sincere interest in the welfare of the patients. To the members of that committee I am indebted for many helpful suggestions. Mrs. E. C. Dudley, the woman representative on the Visiting Committee, has taken up the work with commendable enthusiasm and her monthly visits are most anxiously awaited by our patients to whom she has endeared herself.

To you, members of the Board of Trustees, I desire to express my appreciation for your confidence and courteous consideration which it has been my privilege to enjoy. I further desire to acknowledge my indebtedness to the officers and employees who have aided me in carrying on the work of the hospital during the past year.

Respectfully submitted,

HENRY W. MILLER,
Superintendent.

November 30, 1911.

MEDICAL STATISTICS, 1911.

TABLE No. 1.

GENERAL STATISTICS OF THE YEAR.

	Men.	Women.	Total.
Patients in hospital November 30, 1910.....	507	395	902
Admitted within the year.....	165	142	307
Viz: by commitment.....	142	129	271
for observation.....	3	-	3
by transfer.....	-	-	-
from visit.....	2	1	3
from escape.....	-	-	-

Eastern Maine Insane Hospital

REPORT

OF THE

Resident Officers and Visiting Committee

OF THE

EASTERN MAINE INSANE HOSPITAL

December 1, 1911.

OFFICERS OF THE HOSPITAL.

RESIDENT OFFICERS.

FREDERICK L. HILLS, M. D., Superintendent.
FORREST C. TYSON, M. D., Assistant Superintendent.
FRED E. FREEMAN, M. D., Assistant Physician.
HERBERT E. THOMPSON, M. D., Pathologist.
LESLIE W. SOMERS, Steward and Treasurer.
MRS. ADELAIDE C. BROWN, Matron.

DENTIST.

DR. H. C. FROST, Bangor.

CHAPLAINS.

REV. ALVA ROY SCOTT.
REV. W. L. LOTT.
REV. P. J. GARRITY.
MR. ROBERT A. JORDAN.

SUPERVISORS.

Male.

EDWARD W. BRAILEY.
ROBERT D. REID, Assistant Supervisor.
SAMUEL MARSH, Night Supervisor.

Female.

MRS. MARY E. HICKEY.
MISS MARGARET B. BLAKE, Assistant Supervisor.
MISS HANNAH RUTH ARDRON, Night Supervisor.

S. WILBUR FISKE, Engineer.
EDWIN A. LINNELL, Hospital Clerk.
HAZEL M. WORTH, Assistant Hospital Clerk.
MRS. LILLIAN I. GOODRICH, Superintendent's Clerk.
MRS. ESTELLA M. HUGHES, Assistant Clerk.
FRANK W. GOODRICH, Store Clerk.
GEORGE WARE, Head Farmer.

SUPERINTENDENT'S REPORT.

To the Board of Hospital Trustees:

I have the honor to submit the following report of the operations of the Eastern Maine Insane Hospital for the year ending November 30, 1911.

	Men.	Women.	Total.
Patients in hospital, December 1, 1910	178	227	405
On visit, December 1, 1910	14	21	35
Admitted within the year	172	80	252
Viz.: by commitment	112	71	183
by transfer	59	5	64
from visit	1	4	5
from escape	—	—	—
Whole number of cases within the year	364	328	692
Dismissed within the year	90	93	183
Viz.: discharged	37	38	75
as recovered at time of leaving hospital	18	11	29
as capable of self-support	1	2	3
as improved	15	16	31
as not improved	3	9	12
Died	26	24	50
On visit, November 30, 1911	27	31	58
Patients remaining Nov. 30, 1911	274	235	509
Viz.: supported as State patients	252	198	450
in full by relatives	10	15	25
in part by relatives	8	16	24
private means	4	6	10
Number of different persons within the year	363	327	690
different persons admitted	171	79	250
different persons admitted by commitment	172	80	252
different persons dismissed	89	93	182
persons recovered	18	11	29
persons discharged, capable of self-support	1	2	3
Daily average number of patients	243.6	233.6	477.2

There has been an increase of 104 in the population of the hospital, this increase being due mainly to the transfer of 64 patients from the Maine Insane Hospital early in the year. Fifty-three men were transferred upon the opening of Building F in January, and six men and five women were transferred to enter the tubercular ward last March. The daily average population during the year was 477.2, considerably less than our estimate of a year ago, owing to the facts that the number transferred from Augusta was not as large as expected, and the increased commitments expected from the enlargement of the hospital district has fallen short of what was anticipated.

The daily average population during the past six months has been 505, and there has been a monthly average addition to the population amounting to 4.6, which appears to be the normal increase and would indicate a probable increase in our population to about 560 at the end of the coming year. The opening of the new building in January made it possible to relieve the extreme congestion of the older wards for the men. We removed extra beds which had been set up on the wards and in many of the rooms and reduced the number of patients to the normal capacity of each ward. The number of men has so increased of late that at the end of the year there were but four vacant beds on the men's wards, and it is evident that soon it will again be necessary to set up additional beds. There has been no congestion on the women's wards, the increase in the number of women patients being small during the year. We do, however, feel very keenly the necessity of a better place than is now available for disturbed and restless women patients.

In the summer, six cases of typhoid fever developed in different parts of the hospital. Three patients and two nurses had the disease in a mild form and one male attendant developed the disease a few days after leaving on his vacation. All the cases made a good convalescence. All the milk used in the hospital was pasteurized for several weeks and every effort made to prevent the development of an epidemic. With this exception, the general health of the household has been excellent. In June, six women were injured by the overturning of the barge when starting for the summer outing at Chase Island. Three of these sustained a fracture of the wrist, and the others escaped with a few small cuts and bruises. One woman broke her right ankle while walking in the grove, and one man sustained an impacted fracture of the right hip on being pushed to the floor by another patient. All of the above made uneventful recoveries with exception of the man who was suffering from paresis and developed pneumonia a few days after the injury and died.

Several patients have attempted to escape while on the grounds for exercise or at work. Three of these were away from the hospital over night, but all were soon apprehended and safely returned. Some attempts to leave the hospital without permission are inevitable if that degree of liberty and of

work in the open air is encouraged, which has been proved to be beneficial in treatment. Most of the attempted escapes have been made, however, by patients who are exercising on the grounds under supervision of attendants, and was due to failure of the attendants to properly guard their charges. Such dereliction of duty is now followed by immediate dismissal of the guilty parties. We hope the time is not far distant when it may be possible by adequate compensation to make an attendant's work sufficiently attractive to induce into the ranks men who have some sense of responsibility and a real interest in their duties. That we are fortunate in obtaining some of such a character even under present conditions when it is not possible to reward adequately those who prove worthy, is a thing for which our thanks are due to Providence.

PAROLE.

Considerable use has been made of the parole privilege during the year. No patient has been granted parole whom we did not feel was sufficiently convalescent to be trustworthy and capable of benefit by a return, if only temporary, to their former surroundings. At the beginning of the year, 35 patients were home on parole, five of these returned to the hospital and the remainder were discharged at the expiration of the parole period. During the year, 116 patients were paroled. Of this number, 29 were returned to the hospital, 29 were discharged and remained at home, and 58 were still out on parole at the end of the year. Those who were returned included several who went home for a few days or weeks only, and some who came back to the hospital for a day or two that the parole might be extended another six months. One woman suffering from depression with suicidal tendencies on admission, was given parole after a residence of twelve weeks in the hospital. At that time, she was seemingly convalescent and free from all depressive ideas. One week after returning home she obtained possession of a shotgun and committed suicide. While there was nothing in this case at the time to make us fearful of such an episode, the case emphasizes the importance of conservatism in the parole of patients convalescent from depressed states.

RESULTS OF TREATMENT.

Recoveries.

	Per cent.
On number admitted, excluding transfers and parole patients	10.05
On number discharged	23.20
On number discharged excluding deaths	38.66

Improved and Capable of Self-Support.

On number admitted, excluding transfers and parole patients	17.45
On number discharged	27.20
On number discharged excluding deaths	45.33

Deaths.

On number admitted	19.84
On number discharged	27.32
On total number treated	7.22

The foregoing table shows very satisfactory results of treatment during the year. Twenty-three per cent of all patients discharged were recovered, which is 10% more than last year. In this connection, it is of interest to refer to Table 10, appended to this report, which shows in detail the form of mental disease together with results of treatment, both in the original commitments and in those cases previously under treatment in this or other hospitals. One hundred and fifty-nine out of the 252 admitted, had not previously been in any hospital for the insane. Twenty-five (25.99) per cent of this number were suffering from general paralysis; 17.6% from dementia præcox, and 16.97% from manic depressive insanity. Only 3% were suffering from alcoholic psychoses. Of the total number admitted, alcohol was the exciting cause of insanity in 4.7% and a predisposing factor in 17.8%; insane heredity was elicited in 26.5%. Seventy-three per cent of those first admitted were born in the State of Maine.

MEDICAL WORK.

Staff conferences have been held as formerly, as a rule, on four mornings of each week. At these conferences every new

case with the exception of four or five which were in the hospital too short a time for careful study, have been presented after a thorough physical and mental examination, the patient questioned, and the case discussed by each member of the staff. The new male wards have made a satisfactory classification of male patients possible and added greatly to the comfort and welfare of those acutely ill. They have also afforded opportunity for the proper reception of new patients into a distinctly hospital atmosphere and surroundings. The admission ward has been under the supervision of a woman nurse, a graduate of the training school who has for assistance a pupil nurse, and two attendants. So successful has the nurses' service been on this ward that a similar plan was adopted three months ago on another of the male wards with very gratifying results. Continuous baths on the admission ward have proven of much value for disturbed cases. Hydrotherapeutic treatment in the douche room is used in all cases as indicated.

A larger number of male patients have been employed upon the farm and grounds than heretofore. The usefulness of the repair shop in the new wing will soon be extended by the opening of a broom making industry in connection therewith. It is planned to open a tailor shop on the male wards for repairing, mending and cleaning of the men's suits. The sewing room opened on the women's wards last June has given employment to many more patients than heretofore and we are endeavoring to find other occupations suitable for women on the different wards in the line of knitting, fancy work, weaving, etc. We are endeavoring, also, to make use of patient labor in certain places where heretofore maids have been employed. We hope to be able to make more progress along these lines within the next few months.

PATHOLOGICAL LABORATORY.

Work in this department has been conducted by Dr. Thompson, who since January, has been able to devote practically all of his time in the laboratory. It has been possible to obtain autopsies in but 36% of the deaths but in those obtained, the importance of these investigations has been amply demonstrat-

ed. They have enabled us to satisfactorily account for many obscure conditions, have corrected certain diagnoses and have sometimes revealed the presence of unsuspected lesions. The laboratory has proved especially helpful to the physicians in the diagnosis of diseases through the examination of the blood, cerebro-spinal fluid, sputum, urine, etc. Several cases of furunculosis and carbuncles were successfully treated by auto-genous vaccines prepared in the laboratory. We are now equipped for carrying out the technique of the Wasserman reaction for the diagnosis of syphilis and for all other tests called for in the present day laboratory. The following is a summary of the work done in this department:

Autopsies	18
Stained sections for microscopic examination, from tissues taken at autopsies	202
Blood examinations	8
Feces examinations	1
Lumbar punctures	24
Nogouchi's Butyric Acid reaction on cerebro- spinal fluid	24
Cytological examinations:	
Alzheimer method	10
Stained preparations	30
Other methods	14
Nogouchi's Butyric Acid reaction on blood serum	3
Examination of stomach contents	1
Examination of sputum	8
Examination of urine	209
Von Pirquet Reaction	3
Vaccines (Autogenous)	14
Widal Typhoid Reaction	13
Wasserman Reaction	2
Preparation of various kinds of media for bacteriological work.	

DENTISTRY.

Dr. H. S. Frost has visited the hospital two mornings of each week. He has made frequent trips through the wards examining all patients and taking note of those needing his services.

This service has proved of much benefit to the patients, many of whom were much in need of dental work when admitted to the hospital. The following work has been done by him during the year :

Teeth extracted	87
Teeth filled	541
Mouths cleaned	208
Dental treatments	30
Plates repaired	8
Number of patients treated	284

NURSING STAFF.

There are now 31 women nurses in the hospital, six of these being on night duty and four on the men's wards. We have taken the night nurse from the wards D-2 and D-3, but have not found it possible to otherwise reduce the night service. The ratio of nurses to patients during the day is 1-11 on the women's wards. The following nurses finished their course in the training school and were granted their diplomas in June: Hannah Ruth Ardron, Maude Harriett Miller, Mary Claire Carroll, Ida Elizabeth Erickson, Iva May Bruce, Elizabeth Abbie Foss, Elizabeth Margaret Roach.

There are 25 male attendants, six of whom are on night duty. We have discontinued the night service on E-2 and F-1. The ratio of attendants to patients during the day (including four women nurses) is 1-12.

FARM AND GROUNDS.

The farm has been brought into a high state of cultivation. We have 90 acres of ploughed land, 30 more than last year. All rough land has been cleared with a single exception of about one acre near the farm barn where the hogs were pastured during the summer. The farm crops were of greater variety and in larger amount than in any previous year. The growth of the hospital has created an urgent need for more farm land. All our available land is now under cultivation and the extension of our farming operations without material additions to the farm is not possible. The need of a herd of cows, not only for the production of a milk supply under our own control but also for the proper upkeep of the farm, is

becoming more of a necessity and the establishment of a farm colony in the near future is a matter which I would recommend for your earnest consideration. Considerable grading has been done north of Building C and D, and the roads on the grounds repaired and resurfaced by the farm crew.

MECHANICAL DEPARTMENT.

In March and again in July, careful tests were conducted by the Engineer with the coöperation of the Engineer of the Bangor Railway and Electric Co., to determine the relative cost of electric current as manufactured by the hospital and as purchased from outside sources. These tests demonstrated very conclusively that during the colder months when the exhaust steam can be utilized for heating purposes, the electricity manufactured by our own plant is of little cost to the hospital and is practically a by-product. It was also demonstrated that it is more economical for us to make our own current throughout the year, having as we do a plant well arranged and installed with the idea of its being used in connection with a steam heating system. A large amount of steam being required in the various departments of the hospital, this can be utilized for the generation of current without much additional cost. Economy in this department will be increased by certain changes in piping which are planned for and which will enable us to use all exhaust steam throughout the year. It was found necessary to install a more powerful air compressor than that purchased last year for pumping water from our deep well. This compressor has a delivering capacity of 150 gallons per minute at a depth of 250 feet which will be ample to meet the needs of the hospital for some years. An increased amount of water thus obtained from the deep well will enable us to very materially reduce the amount of water which we have of necessity purchased heretofore. A new stock room has been fitted up adjoining the office of the Engineer, and here are now assembled all electric supplies, brass valves, fittings, etc. Engine No. 1 was thoroughly overhauled during the summer. The serving rooms in Building C have been renovated, new enamelled iron sinks installed, new floors laid, shelves and cupboards renewed, and the walls covered with white enamel paint. A new heater has been put in the piggery for use in boiling swill and for heating certain pens for breeding of early pigs, this necessitat-

ing an addition of about twelve feet to the building used for this purpose.

Several rooms have been finished off in the basement of Building E, for the use of the farm hands and other employes.

It was found necessary to purchase an additional extractor for the laundry, the single extractor previously in use proving unequal to the work incident to the increase in the number of patients. Several rooms in the Steward's house were repainted and papered and a new floor laid in the kitchen.

Fifteen hundred feet of additional fire hose were purchased, a part of which was to replace the hose which was found to be unfit for service. A hose cart was bought and a hose house is now under construction at a central point in the rear of the boiler house. We need additional hydrants on the north and east side of the building and these should be provided in the early spring.

MAINTENANCE.

For comparison, the weekly per capita cost is here given for the last three years:

	Average weekly per capita cost.	Average daily num- ber of patients.
1909	\$7.163	303
1910	6.865	376
1911	6.215	477

The per capita cost has been lower this year than heretofore, and will steadily decrease as the number of patients increases. Last year we asked for a maintenance appropriation on an estimated per capita cost of \$6.50 for 500 patients. We have been able to do much better than this on a smaller daily population and would have no deficit if the Legislature had not cut our maintenance appropriation far lower than was warranted by our estimates which we figured as carefully and as conservatively as seemed warranted if the same standard of care was to be maintained. It is inevitable that we will have a deficit at the end of the coming year, although we will, without doubt, have a lower per capita cost. By certain reductions recently made in the number of employments and the staff a saving of about \$2300 will be effected. We were this year able to place a coal contract for the purchase of a year's supply of coal on the B. T. U. basis, and have reduced our fuel expense, not only in this way, but also by having all the coal delivered before

winter. We expect to be able to show a saving, also, in light, water and other items during the year.

AMUSEMENTS.

In addition to the weekly dances during the winter from Oct. 1st to June 1st, moving picture shows have been given once or twice a month during the season. We are indebted to the U. of M. Dramatic Club for an excellent performance of the Twelfth Night last February, and to several of the nurses for songs, recitations and instrumental music for entertainments. To the Misses Weston, Mrs. T. F. Hughes and Mr. Goodrich we are indebted for instrumental and vocal selections.

We were recently able to acquire scenery and a curtain from the old Bijou Theatre which we trust will enable us to have amateur theatrical entertainments in the near future. During the summer many baseball games were enjoyed, especially by the male patients, a new ball ground having been laid out to the north of the women's wards. Here, also, games, sports and fireworks were enjoyed on the afternoon and evening of July 4th. Prizes for the various events were generously donated by several Bangor merchants.

In the fall, some of the officers and employes volunteered to organize a band under the leadership of Mr. Frank W. Goodrich. This is developing rapidly and gives promise of soon becoming a source of much pleasure to the inmates. Our thanks are due to all those who have so enthusiastically entered into its organization, purchasing their own instruments and bearing the expenses.

The library which proves a constant source of pleasure to the patients has been enlarged by the addition of books from several sources during the year. Especially are we grateful to Hon. Frederick Robie for his magnificent donation of \$2000, the interest of which is to be devoted to the library, and which will insure its steady growth and greatly increase its usefulness to our inmates. Books for the library were received from Mrs. George Fred Godfrey; Mrs. E. C. Dudley, Mrs. Wm. Engel and Miss Minnie Bartlett. For donations of magazines, we are indebted to Mrs. E. F. Woodman, Mrs. R. H. McCready, Miss Mary A. Beale, Mrs. J. H. Crosby, Mr. Richard Palmer, Mr. Chas. Stewart, Tarrantine Club, Mrs. Wm. Engel, and Mrs. Ada L. Morrill. To Mr. R. A. Jordan for Bibles, records for

the phonograph, and donations of money for the patients, we express grateful appreciation. We also beg to acknowledge various gifts from Mr. Thomas White, Caldwell Sweet Co., Curtis & Tupper, Miss Laura Nowlan, Mr. C. H. Savage, Mr. Arthur Chapin, Mr. Oscar Fickett and Rice & Miller.

RELIGIOUS SERVICES.

The regular chapel services have been held as usual. In January, Rev. L. W. Lott was appointed as chaplain to succeed Rev. D. B. Lothrop who resigned to go to another state. Since September, we have had a choir organized among the residents of the hospital and conducted by Mr. Frank W. Goodrich. We are grateful to those who have volunteered in this service, and contributed so much to make this feature of the service a success.

CONCLUSION.

Dr. Fred F. Freeman was appointed assistant physician in January coming here from the Taunton State Hospital and has had charge of the men's wards. There were no other changes on the medical staff during the year.

Mr. Fred R. Carter and his wife resigned in October that he might take up the study of medicine. Mrs. Carter has for several years had charge of the sewing room and Mr. Carter has served for ten years as male supervisor for which position he was most eminently fitted.

It is a pleasure to again acknowledge the helpfulness and support of the officers and the heads of the departments who have worked together to promote the interests of the hospital and the welfare of the patients.

The visiting committee from the Governor and Council have made frequent visits during the year, have devoted much attention to the interests of the hospital and been very helpful in their suggestions.

I beg to acknowledge the generous support and encouragement given me by your Honorable Board and to thank you for your helpful guidance.

Respectfully submitted,

FREDERICK L. HILLS,

Superintendent.

December 1, 1911.

MEDICAL STATISTICS, 1911.

Respectfully submitted,

LESLIE W. SOMERS,

Steward and Treasurer.

REPORT OF THE COUNCIL COMMITTEE.

BELFAST, MAINE, December 31, 1911.

*To His Excellency, Governor Plaisted, and Executive Council
of the State of Maine:*

The Committee appointed by His Excellency in 1911, to visit the Insane Hospitals of the State during the years 1911 and 1912 make the following report:—

Both institutions have been visited during the year at intervals. The wards and different departments of each Institution have been inspected at times, when no intimation to the managers of the visits have been made. The quality of food provided, the serving of the meals, and the neat and sanitary condition of all parts of the Institutions have been pleasing to your Committee.

We have been especially gratified at the careful attention that is being given by the management, in providing varied, appropriate, and useful employment for so many patients as possible, and at the kindly manner of treatment, and the personal interest in each patient, which is apparently taken by the attendants.

Much credit is due Mrs. Edwin C. Dudley, the lady visitor of the Committee, for her untiring devotion, and the faithful interest she has taken in the discharge of her duties. Every month during the year, without waiting for the other members of the Committee, she has visited each Institution, entering the wards with her own keys, moving freely among the patients, listening to their joys and sorrows,—real or imaginary—, and giving comfort and consolation to these unfortunates.

The patients have found in her a friend, and whatever of good has been done by the visiting Committee, is very largely due to the kindly heart, earnest devotion, and deep interest in the welfare of the Institutions, as exhibited and carried out by Mrs. Dudley.

Your Committee would express its obligation for the courtesy and welcome that have been shown by the officers of each Hospital at all times.

G. C. KILGORE,
WILLIS Y. PATCH.
