STATE OF MAINE.

To His Excellency, Oakley C. Curtis, Governor of Maine:

The Commissioners of Inland Fisheries and Game have the honor to present to Your Excellency their report for the year ending December 31, 1915, as required by section 19 of chapter 32 of the Revised Statutes, as amended by chapter 206 of the Public Laws of 1913.

HARRY B. AUSTIN, *Chairman,*
WALTER I. NEAL,
FRANK E. MACE,

Commissioners of Inland Fisheries and Game.

Augusta, Maine, Dec. 31, 1915.

SUMMARY OF HATCHERY REPORTS.

We submit herewith detailed report of the operation of the eleven fish hatcheries and feeding stations for fish in the State for the year 1915.

As will be noted by the following reports of the superintendents of the hatcheries, 5,738,760 fish were raised at the hatcheries and planted in the public waters of the State during the season just closed, as follows: 4,388,040 square-tailed trout, 1,302,220 land-locked salmon, 24,000 togue and 24,500 brown trout.

54,600 square-tailed trout and 330,500 land-locked salmon are being wintered in the hatcheries, to be planted as yearlings and two-year-olds next season.

2,443,000 fish eggs have been taken this season as follows: 1,800,000 land-locked salmon eggs, 514,000 square-tailed trout eggs, 85,000 togue eggs and 44,000 brown trout eggs.

As the supply of eggs secured this season will not be sufficient, we have purchased several millions of trout eggs from private hatcheries within the State. We have also made application to the U. S. Fish Commission for a supply of land-locked salmon, trout and togue eggs.

SQUARE-TAILED TROUT WINTERED.

20,000 square-tailed trout were wintered in the pools, but owing to the action of the frost upon the dams the larger part of these trout escaped into the brook.

1,200 of these fish were planted in the following waters:

May	7,	Duck pond, Falmouth and Windham, Cum- berland County	1,000
	19,	Mansion House brook, Old Orchard, York County	100
Dec.	16,	Cobbosseecontee lake, Winthrop, Kennebec County	100

TOGUE.

25,000 togue eggs were received from the Enfield hatchery. These eggs hatched strong but the entire number was lost on account of surface water entering the pond. An analysis of the water was made and this showed that there was a large proportion of surface water in this supply.

3,000 square-tailed trout eggs were taken at this hatchery fall of 1915.
