DEPARTMENT OF HEALTH AND WELFARE  
BUREAU OF HEALTH

---

Augusta, Maine, May 15th, 1951

*To His Excellency, Frederick G. Payne, Governor of Maine:*

Through David H. Stevens, Commissioner of Health and Welfare

Sir:

Pursuant to Section 387, Chapter 22, Public Laws of 1944, I have caused a record to be kept of all returns to this office of births, marriages, divorces and deaths under the provisions of Sections 385 and 386 of the above named chapter; and transmit, herewith, a report of same for the calendar year ended December 31, 1949.

Respectfully,

PARKER B. STINSON  
*Registrar of Vital Statistics  
Director, Division of  
Vital Statistics*

# REPORT OF THE DIVISION OF VITAL STATISTICS FOR THE CALENDAR YEAR, 1949

---

## GENERAL STATISTICS FOR MAINE, 1949

Live Births, 21,941 (329 fewer than for 1948 but exceeded only in the years 1947 and 1948). This number included 207 plural births in which at least one child was born alive. Included were two sets of triplets. There were 390 Stillbirths. There were 8,085 Marriages (2,208 fewer than in 1948). There were 10,173 Deaths (82 more than in 1948), 891 Adoption orders were processed and report of 2,114 Divorces were added to the central file.

## POPULATION

Final decennial census figures for 1950 being available, an estimated population of 907,120 for 1949 is accurate.

## ALLOCATIONS, INTERPRETATION AND RATES

Beginning with 1935, births and deaths have been assigned to the place of residence rather than to the place of the event. In 1939 upon adoption of the Standard Certificates of Birth, Death, and Stillbirth, the arbitrary rule of one year of residence is replaced by the entry by the physician or funeral director of the "usual place of residence". (In the case of a birth or infant death, the residence is that of the mother). The numbers quoted in the following tables accordingly, regardless of the place of the event, deal only with residents of towns and cities of the state. It should be understood that among the states of the Union and with the several provinces of Canada there is interchange of the records of birth and death, and in the case of marriages of non-residents there is an exchange among the states of New England. The general or "crude" rates of birth, death, and marriage are reckoned as so many to each 1,000 population. Infant death-rates and puerperal or maternal death-rates are the number of such rates to each 1,000 live births. Specific death-rates, those for separate death causes, are reckoned as so many to each 100,000 population.

### NEW CONCEPT OF ASSIGNMENT OF CAUSES OF DEATH

With this year began the use of the Sixth Revision of the International Lists of Diseases and Causes of Death, fashioned by the World Health Organization at the Geneva Assembly in 1948. The Manual of its classification has been so broadened into detail that the costs of printing have forced a condensing into the "Intermediate List of 150 Causes for Tabulation of Morbidity and Mortality." This scheme, adequate for most purposes, obliges researchers in special fields to obtain their information by letter to this office. Now after five cause-of-death classifications but all using the same manner of determination, the Sixth Revision alters radically both the classification and determination of the cause-of-death assignment. As a consequence, certain death causes (notably diabetes mellitus, nephritic diseases and deaths by accident) from now on will not be comparable with assignments of years before 1949.
