May 1, 1952
Honorable Frederick G. Payne
Governor of Maine
State House
Augusta, Maine

## Dear Governor Payne:

In accordance with the provisions of the Maine Employment Security Law there is respectfully submitted herewith a report covering the administration and operation of this Law during the preceding calendar year, together with a statement showing the financial status of the Maine Unemployment Trust Fund at the close of 1951.

Respectfully submitted,

## INTRODUCTION

Several amendments to the Maine Employment Security Law were enacted by the Legislature which became effective August 20, 1951. A provision was made for the payment of benefits to eligible discharged servicemen and women if they are not eligible for unemployment benefits under a Federal program. Several amendments were adopted to conform to Federal amendments to the Unemployment Tax Act relative to coverage such as; employment of students, limitation of $\$ 3,000.00$ on annual wages paid by a successor employer, and dismissal payments considered wages. Provisions were made for any change in coverage, such as agricultural labor or an increase in taxable wages, under the Federal Law whereby such services would be covered under the Maine Law. With reference to chargebacks to an employer's account no charge will be made if a claimant has refused to accept re-employment in suitable work when offered by a previous employer without good cause attributable to such employer.

After public hearing the Commission amended its Regulation relative to the procedure for filing claims.

The Commission, after hearing, decided in five cases that the employing units in question were not liable under the Maine Law.

Twenty-nine cases of alleged labor disputes were referred to the Commission during 1951.

The Bangor and Waterville offices were moved to more desirable locations.

The making of informational films, started in 1950, was continued through 1951 and six films are now available for recruitment and training, as well as being of great assistance in establishing better public relations. These films cover the market garden program, the potato harvest, the snap-bean harvest, an experimental logging camp, the pea harvest program and the many-sided harvesting program of Maine fruits.

Radio job-casts were carried on with local offices and will be expanded during 1952. Exceptional cooperation was given by newspapers, radio stations and various publications, in handling Agency news releases and other material. For this help the Commission is extremely grateful.

During 1951 our Standards, Methods and Planning Unit instituted a plan for evaluation of nonmonetary determinations and prepared
necessary forms and procedures for conducting such a program at the local office level.

Interstate claims procedures were completely revised as were the interstate appeals procedures.

A completely decentralized training program resulted in improvement in the training field. Major emphasis, during 1951, covered the programs of Claims Taking, Fact-Finding and Local Office Management. Training was started on the program of time distribution and budget preparation and full training activity in this program will be carried on through 1952.

The Research and Statistics Unit completed a study of labor market attachment and job-seeking experience of claimants following the exhaustion of their benefit rights. The results will be integrated with survey results covering subsequent benefit years in order that valid appraisals of the benefit duration provisions of the Law may be made.

Listings of defense contract awards and synopses of proposed defense procurements have been given to interested Maine employers. Greater stability in employment has resulted from the Commission's cooperation in promoting the utilization of the State's labor and industries in defense production.

The labor analysis program was accelerated due to a step-up in the mobilization of resources for national defense. Participation in a country-wide project to classify selected areas, as to labor supply and demand relationships, placed added stress on labor market developments having a bearing on defense production. The Research \& Statistics Unit developed statistics and information for the monthly issuance of a Bureau of Labor Statistics report, in cooperation with the U. S. Bureau of Labor Statistics, and for a bi-monthly issuance of a 4-page printed Labor Market News Letter. Circulation of both these issues has been expanding steadily.

During 1951, the public relations director assisted in the farm labor recruitment program by developing publicity material and an exhibit for the Skowhegan Fair. A summary of local office activities, as well as a state-wide summary, has been released monthly. Local office year-end summaries were compiled for Industrial Editions of some local papers. During the year special releases were also furnished to special purpose publications in the State. The director attended labor conventions, spoke and showed Agency moving pictures before service clubs and other groups.

In cooperation with the Governor's Committee on Employment of the Physically Handicapped, this Agency has placed more than 3,400
handicapped workers in suitable employment during the past 3 years. A continuous year-round program resulted in 1,344 placements during 1951 -the greatest number yet in a single year.

Under sponsorship of the Governor's Committee the second annual State-wide Essay contest, in the secondary schools of Maine, was conducted. Prizes of $\$ 250.00$ in Savings Bonds were sponsored by the American Legion, Department of Maine; the Veterans of Foreign Wars, Department of Maine and business firms and banks. Miss Patricia Weaver of Waterville High won first prize, a $\$ 100.00$ Bond; Andre Cote of Notre Dame Institute, Alfred, second prize, $\$ 75.00$ in Bonds; Anna Santoro of Deering High, Portland, third prize, a $\$ 50.00$ Bond and Charles Abbott of Stephens High, Rumford, fourth and a $\$ 25.00$ Bond. All State winners receive parchment awards from President Truman's Committee in honor of their essays being sent to Washington to be considered for national prizes.

The Legal Department collected delinquent employer accounts amounting to $\$ 36,288.15$, an increase of about $\$ 24,000$ over 1950 collections. Many suits are now in process with 28 cases pending in the Kennebec Superior Court, 2 in Aroostook and 1 in Penobscot.

The Commission was granted authority to charge-off as uncollectible employer delinquencies of contributions and interest amounting to $\$ 10,852.76$, overpayment of benefits due to fraudulent filing amounting to $\$ 1,383.00$, and overpayment of benefits covering the period from January 1, 1938 through December 31, 1944, amounting to $\$ 19,121.65$.

## ADMINISTRATIVE COSTS

The following statements reflect in summary form the activities within the Administrative Fund accounts for 1951.

## ADMINISTRATIVE FUND Cash Receipts and Disbursements Calendar Year 1951

| Federal Grants: |  |  |
| :---: | :---: | :---: |
|  |  |  |
| U. S. Department of Labor | 984,953.75 |  |

*Includes $\$ 49,477.79$ paid to Maine State Employees Retirement System to cover this Agency's portion of Contributions and Expense for Calendar Year 1951.

## Balance Sheet-December 31, 1951

Note The Contributions for 1951 shown above include Contributions Received as of February 28.1952 applicable to 1951

## UNEMPLOYMENT COMPENSATION ACTIVITIES

During the year 1951 the Field Examiners made 7618 calls on employers and employing units for the purpose of making audits, determining liability, collecting delinquent contributions and reports and advising them relative to the provisions of the Maine Employment Security Law.

In auditing employer accounts it was found that 117 employers had failed to report taxable earnings on which additional contributions were due in the amount of $\$ 4,490.18$. It was also found that $139 \mathrm{em}-$ ployers had overpaid contributions in the amount of $\$ 4,884.77$.

Contributions, interest, and penalties amounting to $\$ 116,736.87$ were collected during the year 1951. Delinquent quarterly contribution reports were obtained from 148 employers on which contributions were due in the amount of $\$ 21,852.76$.

There were 3,454 employer accounts eligible to be computed for a contribution rate as of July 1, 1951. The number of employer accounts that did not have sufficient experience to be computed was 1,155 .

Of the 3,454 employer accounts computed, 2,952 were eligible to make contributions at a rate lower than the maximum of $2.7 \%$.

The Commission recommends the continuance of the experience rating provisions of the Law.

The following table shows the 3,454 rated accounts by size of annual payroll:

Analysis of Rated Employer Accounts by Size of Taxable Payroll and by Rate Class, for July 1, 1951-June 30, 1952 Rate Period

The fact that the 551,964 aggregate number of unemployment compensation claims filed in the local offices of the Commission during the calendar year 1951 shows a decrease of $32.92 \%$ from the number filed during 1950, clearly reflects continuation of the improvement in the employment situation which began during 1950. In fact, the Commission's over-all benefit payment experience during 1951 is closely comparable to that of the three years preceding the critical year of 1949.

## Initial Claims

New initial claims totalling 50,309 were filed in the 16 local offices of the Commission during 1951, reflecting a decrease of $20.84 \%$ from the previous year. This number represents individual claimants, and does not include additional initial claims as reflected in accompanying tables. Included are, however, 2,744 new initial claims received by the Maine Agency as Agent state, for transmittal to the various Liable states for their determination. The total new initial claims requiring determination consisted of 47,565 such claims filed in the Agency's local offices, plus 2,311 new initial Interstate claims received from other agencies under the Interstate Agreement, plus 493 new initial claims pending at the beginning of the year, making a total of 49,876 new initial claims requiring determination.

A total of 49,203 monetary determinations were made during 1951, with respect to new initial claims, 483 new initial claims were disposed of without determination, leaving a balance of 683 pending at the close of the year. This lag represents less than $75 \%$ of the average weekly receipt of new initial claims for the calendar year. The number of monetary determinations made during 1951 reflects a decrease of $19.86 \%$ from the previous year, which is consistent with the decreased claim load. A total of 47,081 determinations, or $95.69 \%$, resulted in a finding of eligibility, and 2,122 , or $4.31 \%$ resulted in a finding of noneligibility due to lack of, or insufficient wage credits established in the base year 1950. The ratio of eligibles to non-eligibles was slightly higher than that of $93.74 \%$ for 1950 , and than the last five years average of $93.34 \%$.

Initial UC Claims Taken at Local Office Level，by Year， 1938 through 1951

## Benefit Payments

The total number of benefit checks issued during 1951 was 384,653 , which number includes supplemental and re-issued checks. This number reflects a decrease of $38.11 \%$ from the number issued in 1950, and a decrease of $47.88 \%$ from the number issued in the critical year of 1949, further reflecting continued improvement in the employment situation. The gross amount of benefits paid out during the year was $\$ 5,596,428.00$, a decrease of $38.67 \%$ from the previous year, which is consistent with the decrease in number of checks issued. The amount of the average weekly check issued during the year was $\$ 14.55$, slightly under the 1950 average of $\$ 14.68$. This difference is due in part to the fact that $15.29 \%$ of all checks issued during 1951 were for partial unemployment and reflected deduction from the full weekly benefit amount, whereas only $12.76 \%$ of the checks issued in 1950 were for partial unemployment.

The number of claimants who received one or more benefit checks during 1951, as reflected by the number of "First Payments" made during that period was 37,144 , equivalent to $78.89 \%$ of the number of claimants who filed claims during the year and were found eligible for benefits on the basis of wage credits. This percentage is considerably lower than the corresponding percentage of $92.8 \%$ for the previous year, as well as substantially lower than the average for the last five years. A total of 8,654 claimants exhausted their benefit rights during the year, which number reflects $18.38 \%$ of the number of claimants found eligible during the year, and $23.30 \%$ of all claimants who received one or more benefit checks during the year. These exhaustion ratios of $30.98 \%$ and $32.80 \%$ for 1950 , constitute a further indication of improved employment opportunities.

*Supplemental payments and reissued checks are excluded from this table.

## Interstate

During 1951 the Maine Agency, as the Liable state, received a total of 2,311 new initial Interstate claims, reflecting an increase of $10.68 \%$ over the previous year. A total of 7,155 benefit checks were issued to claimants filing in other states against wage credits established in Maine, which number reflects a decrease of $45.5 \%$ from the previous year. The ratio of Interstate payments to Interstate new initial claims was only 3.10 , whereas the ratio of Intrastate payments to Intrastate new initial claims was 7.94 . This apparent anomaly is accounted for in part by the fact that many Maine workers left for other states immediately following mass layoffs hoping to find employment in defense plants in other states. Failing to find work there promptly, they initiated Interstate claims for benefits, and later found work or returned to Maine after a comparatively brief period of filing Interstate claims. The total amount of benefits paid to Interstate claimants during the year was $\$ 119,696.00$, a decrease of $42.72 \%$ from the amount of Interstate benefits paid the previous year.

## Deputies' Decisions

A total of 27,890 decisions were rendered by claims deputies during 1951, an increase of $25.03 \%$ over the number rendered in the previous year. Further, the ratio of deputies' decisions to the number of claimants found eligible during the year was $59.24 \%$, as against a ratio of $38.45 \%$ in 1950. This increase in number and ratio is the result of continuing emphasis on the careful screening of all claimants, further implemented by scheduled periodic re-interviews for claimants in extended periods of continuous filing for benefits. The following table reflects an analysis by type of issue of all deputies' decisions rendered.

## Table of Decisions by Type of Case

TABLE XII

| Type of Case | Total Number | \% of Total | Allowed |  | Disallowed or Disqualified |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Number | Per Cent | Number | Per Cent |
| Voluntary Quit | 7,214 | 25.87 | 5,521 | 76.53 | 1,693 | 23.47 |
| Misconduct | 1,589 | 5.70 | 958 | 60.29 | 631 | 39.71 |
| Refusal to Accept or Apply . . | 1,716 | 6.15 | 1,127 | 65.68 | 589 | 34.32 |
| Able and Available | 9,482 | 34.00 | 3,995 | 42.13 | 5,487 | 57.87 |
| Misstatement | 534 | 1.91 | 125 | 23.41 | 409 | 76.59 |
| Other | 7,355 | 26.37 | 5,209 | 70.82 | 2,146 | 29.18 |
| All Cases | 27,890 | 100.00 | 16,935 | 60.72 | 10,955 | 39.28 |

A review of the above table reveals a substantial increase in the category of "Other", namely $26.37 \%$ as against $14.51 \%$ in the previous year. Further, $70.82 \%$ of cases falling in this category were allowed, as compared to $46.40 \%$ for 1950. The increase noted can be accounted for in part by the great number of adjustments made necessary during the year by award by many large employers of retroactive wage increases, which affected claims previously filed by the individuals involved, the claims being allowed but with reductions in the weekly benefit payment. The increase can be further accounted for by the increased number of decisions rendered on the issue of late reporting to file claims. Such decisions were not previously documented if the claims in question were allowed. If the inflation of the number of cases falling within the category of "Other" is discounted, the distribution and allowance ratio of the cases falling in the remaining categories do not vary significantly from those of previous years.
A total of 3,322 deputies' decisions resulting in disqualifications were rendered during 1951, involving an aggregate of 11,861 weeks, and $\$ 194,231.00$ reduction in available benefits. These figures reflect decreases in disqualifications of $19.83 \%$ in the number of weeks and $19.39 \%$ in reduction of available benefits. Overpayments were established in a total of 1,607 cases, involving a total a mount of $\$ 44,149.50$, a decrease in amount equivalent to $24.02 \%$. Of these, 403 , or $25.08 \%$, involved wilful misrepresentation, and accounted for $\$ 31,189.50$, or $70.65 \%$, of the total amount of overpayments established during the year. The total amount of overpayments established during the year was equivalent to $0.79 \%(79 / 100 \%)$ of the total amount of benefits paid during the same period.

During the year 1951 the over-all recovery of benefit overpayments was $\$ 43,421.04$, equivalent to $98.35 \%$ of the amount of overpayments established during the same period, which recovery ratio is the highest so far attained by the Agency, and clearly reflects the Agency's continued emphasis on collection efforts. Of this amount $\$ 32,907.00$ was collected by the Fraud Investigation Unit. Of the total amount recovered, $\$ 33,545.85$, or $77.26 \%$ was repaid in cash, and $\$ 9,875.19$, or $22.74 \%$ was recovered by cancellation or offset by valid claims. The recovery ratio for cases involving wilful misstatement was $96.69 \%$, and the recovery ratio for cases involving other issues was $102.35 \%$.

## Forgeries

Through the cooperation of the Department of State Police, forgery was established with respect to endorsements on 7 benefit checks, and recovery effected in a total of $\$ 106.00$. There were 8 cases of alleged forged endorsement pending at the close of the year.

## Fraud

During the past year, fraud has decreased quite noticeably, due, we believe, in no small measure, to the newspaper publicity following court cases, and the general knowledge that investigations are being made state-wide on a continuing basis.

The average weeks of violation per case, however, remain fairly constant. For the six months period ending June 30, 1951, violation cases averaged 2.71 weeks, while for the period July 1 to December 31, 1951, the average was 2.27 weeks, with a twelve-months average of 2.56 weeks per case.

At the beginning of the calendar year 1951, pending cases numbered 321. During the year, 511 cases were added, as follows:

Restitution ordered by the Court 113
Collection (alleged fraud) not referred 230
Collection (legal) administrative 168
Total 832
During the year, 553 cases were disposed of as follows:
By final payment 362
By recommended offset 159
Remanded to deputy 31
Debit cancelled
Total ${ }_{553}$
Cases pending as of December 31, $1951 \quad \overline{279}$

During the period involved, 216 cases were referred to the Courts. Of this number, 7 cases were filed; fines were imposed in 43 cases; fines were suspended in 18 cases; 94 jail sentences were handed down; and 86 were suspended upon payment of the debit within a stipulated period.

During the year, 6 cases were appealed to the Superior Court. Two of these cases have been heard, and in each instance, restitution was upheld, and the claimant placed on probation.

During the year, 1,575 claimants and 1,018 employers, as well as 360 persons, not registered claimants, were interviewed by our investigators. A total of 1,015 statements were taken, which resulted in 615 cases of fraud and 617 non-violation cases. Five hundred eighty-nine cases resulted from claimants filing for benefits while partially or totally employed; 18 because of false statements; and 8 not being able and available for work.

Collections for the year were as follows:
Fraud-

| 1. Cash | 1,249 accounts | $\$ 27,701.00$ |  |
| :--- | :---: | ---: | :--- |
| 2. Offset | 316 accounts | $2,359.00$ |  |
|  |  | Total (fraud) |  |
|  |  | $\$ 30,060.00$ |  |

Administrative

| 1. Cash | 60 accounts |  |
| :--- | :--- | ---: |
| 2. Offset | 58 accounts | $\$ 1,034.25$ |
|  | $1,812.75$ |  |

| Total (administrative) | $\frac{\$ 2,847.00}{\$ 32,907.00}$ |
| :--- | :--- |
| Grand Total | $\$ 2$ |

In the great majority of cases, Claims Investigators are well received and given full cooperation by employers. Also, in the great majority of cases, we receive the full cooperation of the courts, and cases are set for hearing promptly upon presentation. It is interesting to note that, to date, we have had very few repeaters.

## Servicemen's Readjustment Allowances

The SRA claim load again decreased drastically during the year 1951, after having decreased $91.37 \%$ from 1949 to 1950 , due to the fact that entitlement to allowances expired for most Veterans in July
1949. The over-all SRA local office claim load for 1951 was only 1,944 , reflecting a $91.46 \%$ decrease from the already greatly reduced 1950 claim load. Only 44 new applications for allowances were filed during the year, a decrease of $91.24 \%$ from the previous year.

Checks for weekly SRA Allowances were issued in a total number of 1,595 , and a total amount of $\$ 30,934.00$, reflecting decreases of $92.13 \%$ and $90.88 \%$, respectively, from the previous year. Only 3 monthly SRA checks for self-employment, each in the amount of $\$ 100.00$, were issued during the year.

## Deputies' Decisions-SRA

In line with the reduced SRA claim load, only 115 deputies' decisions were rendered during 1951 with respect to such claims. This number of deputies' decisions reflects a decrease of $25.05 \%$ from the previous year. The accompanying table depicts the distribution of SRA deputies' decisions by type of issue involved. It will be noted that 52 , or $45.22 \%$ of all cases were decided in favor of the Veteran, and 63 , or $54.78 \%$ were disallowed or disqualified. Due to the small number of cases involved, the table does not lend itself to a meaningful analysis for comparison with experience in previous years. The total amount of SRA overpayments established during the year was \$2,017.00, and the total recovery for the year was $\$ 1,889.50$.

## Table of 1951 Readjustment Allowance Decisions by Type of Case

TABLE XV

| Type of Case | Total Number | $\%$ of Total | Allowed |  | Disqualified or Disallowed |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Number | Per Cent | Number | Per Cent |

*All benefit checks issued, including supplemental and reissued checks, are summarized in this table.

## Appeal Tribunal

The number of appeals taken in benefit payment cases dropped considerably in the year 1951. During the year the Appeal Tribunal received 1,304 cases, which added to the 128 cases carried over from the previous year, made a total case load of 1,432 cases. Ninety of these cases remained unfinished at the end of the year. The 1,342 cases disposed of during 1951 were made up as follows: 936 regular UC cases and 406 UC fraud cases.

In these 1,342 cases, 206 cases were dismissed because of nonappearance, request for withdrawal, lack of jurisdiction, etc., and 1,136 were disposed of by formal decision. Nine hundred and twenty-two appeal tribunal decisions affirmed the prior deputy's decision, and 214 reversed the deputy's decision. This represents affirmation in $81.2 \%$ of these cases and reversal in $18.8 \%$. As far as the promptness of making these 1,136 decisions is concerned, $62.9 \%$ were disposed of within 30 days after appeal was filed in the local office, and $87.8 \%$ were disposed of within 45 days. The remaining 139 cases, in most instances, were delayed beyond this point because of reasons beyond our control.

Under the Interstate Appeals Arrangement, the Appeal Tribunal heard 127 cases, concerning benefit payments by other States to claimants now living in Maine.

The Appeal Tribunal decided 406 fraud cases referred to it after hearing and affirmed the prior deputy's decision in almost all cases. Additional suspension of benefit rights was imposed in 336 cases and 70 were decided without this additional disqualification.

## Commission Appeals

The Commission reviewed 84 cases during the year. Two cases were dismissed, 3 cases were remanded to the Appeal Tribunal for further action. The Commission affirmed the decision of the Appeal Tribunal in 65 cases and reversed the decision in 14 cases.

## EMPLOYMENT SERVICE ACTIVITIES

## Placement Service

## Non-Agricultural

The employment level during the year 1951 was higher than that experienced for the year previous although the ratio of partially unemployed workers increased toward the end of the year as compared to the ratio of partial unemployment for 1950. In some areas curtailment in the production of textiles and in the manufacture of boots and shoes resulted in unbalanced employment of varying duration. During peak periods of production nonagricultural employers relaxed slightly on "worker specifications" and there was more willingness to accept new or inexperienced workers in a number of occupational pursuits.

The "active application file," which is the documented record of worker experience, training, or aptitude, is unquestionably the best barometer of general labor market conditions available. During 1951, the monthly average of applications for the State was 14,500 . The low period came in September with 10,956 , and the highest was at the very beginning of the year with 17,833 in January. The 1951 monthly average was 35 percent below the monthly active file average of 22,314 for 1950.

Evidence of the continued and greater extent that workers are receiving work opportunities through the placement facilities of the Agency's placement service is shown by the fact that the 36,192 nonagricultural placements made during 1951 exceeded the 24,390 new applications taken during the same period by 48 percent. The number of job openings that employers made known to local offices increased 14 percent over the experience of the previous year.
The ratio of 1 person placed for every 1.84 referred for employer consideration was slightly higher than the ratio for the previous year. The increase was due to the high percentage of "drop-outs" when recruitments were conducted by out-of-state employers and wherein applicants failed to report for work after being accepted by the employer under a hiring commitment.

During the year 965 placements were verified with out-of-state nonagricultural establishments. The majority of these placements were
the result of personal recruitment interviews between a representative of the employer and an applicant desirous of obtaining employment outside Maine. It is estimated that at least four to five times the number of workers placed through this process left Maine of their own volition during the year for employment in southern New England.

TABLE XVIII

# Nonagricultural Placements Made, by Local Office, by Major Occupational Group, 1951* 

TABLE XIX

*Includes "Local" and "Inter-office" placements.

## Agricultural

Maine farm employers and food processors faced a serious labor shortage as the 1951 agricultural season opened. This shortage was largely due to an increasing defense worker demand by industries with mounting defense contracts who have been recruiting in Maine for some time. As a partial result several thousand workers, many from rural areas, have migrated to southern New England industrial centers. A high employment level in many Maine industries, plus attractive wage schedules, has further depleted Maine's farm labor pool.

In addition to providing agricultural and food processing employers with year-round workers, four special seasonal programs to solve recruitment problems peculiar to Maine continued in operation during 1951. The programs were:

## 1. Day Haul Program-(Youth)

This program includes the utilization of boys and girls between ten and sixteen years, organized into crews under adult supervision. They are transported daily to and from the work site. During May local offices embarked upon intensive recruitment in the schools. Realizing the need for a large labor force during the 1951 season, the school re-

The 1951 State Bean Picking Contest. It was held in the Bangor area

Awarding the prizes in the 1951 State Bean Picking Contest

Farm Labor Booth -- 1951 Skowhegan Fair
cruitment was expanded to include many rural schools. It was also necessary to recruit in Aroostook County for the first time, due to increased snap bean acreage. In summary, fourteen local offices participated in the Day Haul Program by recruiting in 276 schools in 137 communities and obtained a total initial registration of 12,845 youth. After the close of schools further supplementary recruitment campaigns were organized prior to the processing crop harvest season, which increased the total enrollment to more than 15,000 . Over 140,000 day placements were made on approximately 900 different farms under this program.

Again this year, with the endorsement of the Commission, the Maine Canners Association sponsored the State Bean Picking Contest, which was held in Bangor on August 29. The State Contest and the various area elimination contests create considerable interest among these young workers and stimulate a healthy spirit of competition. It also encourages the recruitment of youth and their continued employment.

## 2. Junior Farm Volunteers

In this group were boys of high school age recruited for farm work during the summer vacation. While this was primarily a "live-in" program, many of these boys elected to perform day work and return home at night. Many of these youngsters eighteen years of age and over were employed effectively in food processing plants. The response from this group during the 1951 season was most gratifying and we are convinced that older boys between the ages of sixteen and nineteen years can be of material assistance in performing many of the tasks found in agriculture and processing plants. Approximately 900 of these older boys found employment in the various activities concerned with agriculture and food processing.

## 3. Aroostook Potato Harvest Program

This program was organized to service the largest agricultural enterprise in the State and included domestic recruitment as well as the recruitment of supplementary Canadian labor required to maintain a harvest force of approximately 25,000 . The Maine potato acreage declined from 130,000 acres in 1950 to approximately 103,000 acres in 1951. The total acreage in Aroostook County during the 1951 season was 87,000 , the smallest in more than 45 years.

During the past season, the Commission adopted operating procedures similar to those in use during the previous three seasons to
assure an adequate harvest labor force. This included close working arrangements between the Agency and the growers' organization, the Aroostook Farm Bureau Labor Association. The 1951 season once again experienced a drastic reduction in the volume of farm labor from sources outside Aroostook County. Practically no labor entered the county from other states, due to high employment levels. Consequently, it was necessary to continue working arrangements with the Aroostook Farm Bureau Labor Association to provide for the importation under their bond sufficient supplementary Canadian harvest labor necessary to make up any deficit. Our preliminary estimates made in late July indicated a shortage of 3,000 to 3,500 workers. When the harvest was actually under way, it was found necessary to bring in 1,793 bonded Canadians. This figure was slightly below the 2,210 imported in 1950. Despite high employment levels in nonagricultural activities in the county and down-state during the harvest period, intensive recruitment plus Aroostook County school youth made available by the closing of schools for a two to three week period, resulted in an adequate supply of labor with a minimum of importation.

## 4. Seasonal Food Processing Labor and Miscellaneous Agricultural Crops Program

This program included the manning of canning and freezing plants throughout the State, the harvesting of corn, small fruits (blueberries, strawberries, etc.), apples and other agricultural products with substantial acreage. In an all-out effort to secure a large vegetable and fruit pack, acreage goals of Maine canners exceeded 64,000 acres during 1951. It was only through the utilization of all recruitment techniques available to our local offices that they were able to maintain an adequate labor force during the processing and harvesting season. In some instances perplexing problems occurred. For example, the late maturity of the sweet corn crop caused the harvest to occur at the peak of the apple and potato harvest. Consequently, it became necessary to stretch to even a greater degree an already frayed labor supply. Our recruitment of processing workers resulted in more than 4,500 placements, as compared with 2,348 placements during the previous year.

## Itinerant Service

Adequate itinerant service coverage from local offices to selected communities was maintained throughout the entire year. The deter-
mining factor in maintaining an itinerant station is the number of applicants or claimants to be served as measured against the travel distance and convenience to the number served. Although the level of higher employment during 1951 resulted in approximately 53 percent less claims for unemployment benefits filed at itinerant points than during the previous year, from 67 to 94 itinerant points were maintained as being warranted to render adequate service. The low point was recorded in October at the height of the agricultural harvest period.

## Service to Veterans

New applications for work opportunities taken on behalf of exservicemen totaled 2,171 , or 8.9 percent of all new work applications, and 17.5 percent of all male applications, which totaled 12,420 .

Applications taken for veterans with physical handicaps or disabilities was the lowest for any year since before World War II, and totaled 142.

Special effort to assist these veterans in securing gainful employment showed favorable results as the number of veterans placed during the year who had such physical handicaps or disabilities equaled 640 , or 53 percent of all male disability placements.

The total placements of all veterans in nonagricultural employment was 8,273 , or 38.6 percent of all males placed.

## Employment Counseling

Local Office managers and interviewers are trained to be ever alert to recognize the need for counseling and guidance to persons who have been unable to make a satisfactory vocational adjustment because of such factors as youth, lack of experience, advanced age, physical disability and loss of employment due to technological changes.

During the year there were 2,052 initial instances where the need for such specialized service was revealed, which represents 8.2 percent of all new applications taken during 1951 as compared to 6.5 percent for the year 1950. Of that number, 374 were on behalf of ex-servicemen. Follow-up or subsequent counseling interviews with the same applicants totaled 3,323 , which reflects an average of 2.6 interviews per recognized counseling case. Of the 2,052 applicants for whom the need for counseling was established, 558 had some kind of physical handicap or disability which presented a problem in readily securing gainful employment.

There were 152 cases which were referred to the Vocational Rehabilitation Division of the Department of Education as such cases required medical, surgical, psychiatric, prosthetic devices, or further vocational guidance.

A favorable record of progress in the placement of handicapped
applicants is shown by the fact that 1,322 placements were verified. This is an increase of 32 percent over the accomplishment of the previous year, and is 120 percent above the number of 600 applicants with disabilities who registered at local offices for the first time during 1951.

## Testing

The use of testing as a means to determine aptitudes or fitness increased over the experience of the previous year. The total number of tests given different individuals totalled 1,164 . Of that number, 52 were proficiency tests, 427 received the General Aptitude Test Battery and 685 were given special aptitude tests. The latter group are used to reveal dexterity of forearm, hand and finger motion, and the capacity for coordination of sight and motion to perform certain tasks or duties that are important components of particular jobs.

Summary of Basic Local Office Work Load Activities, by Office, 1951
