INTRODUCTION

This report contains a summary of the Vital Statistics of the State of Maine for the calendar year 1962. Births and deaths are tabulated for each county and for 49 selected urban cities and towns. The 49 urban cities and towns selected for separate tabulation are those places designated as urban in the 1960 Census of Population.

ALLOCATION OF VITAL EVENTS

The Statistics on births and deaths in this report refer to residents of Maine only, regardless of whether or not the birth or death actually occurred in Maine. Statistics on marriages and divorces in this report have reference to non-residents as well as residents of Maine who marry or are divorced in the State.

Births are allocated to the usual residence of the mother and deaths to the usual residence of the deceased. This information is obtained for the certificate by the physician, hospital record librarian, funeral director, or other person responsible for completing the certificate of birth or death. The practice of allocating births and deaths to usual place of residence was initiated in 1935. This system of allocation is made possible by the exchange of transcripts of non-resident births and deaths with other states and with Canada.

Marriages and divorces are allocated to the place in Maine where the marriage ceremony was performed or where the divorce decree was granted rather than the place of residence.

FACTORS AFFECTING ACCURACY

A number of factors operate to produce certain slight inaccuracies in this report. Some of the more important of these factors are outlined below:

(1) Completeness of Registration: A birth certificate test conducted in 1950 indicated that about 1 percent of births in Maine are not recorded. In addition to unrecorded vital events, others may not be included in this report by reason of failure of the person required to report the event to make a timely report, or failure of a city or town clerk to make a timely report to the State Registrar, or failure of other states to make timely exchanges of nonresident transcripts of births and deaths.

(2) Errors in Data: Data in this report are based upon original certificates of births and deaths, copies of original certificates of marriages prepared by city and town clerks, and abstracts of decrees of divorces prepared by the clerks of courts. Errors in data may be introduced by persons giving information for the original certificate, persons involved in the actual preparation of the original certificate, or persons involved in the preparation of the copies or abstracts of the original certificates which are submitted to the State Registrar.

POPULATION ESTIMATES

The estimate of population of the State on July 1, 1962 which appears in this report is prepared by the U.S. Department of Commerce, Bureau of the Census. Estimates of the populations of the counties are prepared by the Division of Vital Statistics.

The population of counties are independent estimates prepared for each county by means of a method which combines the use of vital rates and arithmetic progression. The county population estimates prepared in this manner are than adjusted by a constant factor so that the sum of the population of counties equals the population of the State as a whole as estimated by the Bureau of the Census.

MORTALITY CLASSIFICATION

The International Conference for the 7th Revision of the International Lists of Diseases and Causes of Death, was held in Paris under the WHO auspices in 1955. The recommendations of this conference were adopted by the 9th World Health Assembly in 1956, and the resulting new International Statistical Classification of Diseases, Injuries, and Causes of Death was placed in use in Maine and throughout most of the World on January 1, 1958.

The 7th Revision of the International Statistical Classification consists of a list of 612 categories of diseases and morbid conditions, plus 153 categories for classification of the external cause of injury, and 189 categories for the characterization of injuries according to the nature of the lesion.

Under the 7th Revision the method for selecting the cause of death for statistical purposes remained the same as the method under the 6th Revision. The 6th Revision, introduced in 1949, introduced a method whereby the physician in attendance at death indicates the disease or morbid condition which he considers to be the underlying cause of death. The underlying cause is defined as "(a) the disease or injury which initiated the train of events leading directly to death, or (b) the circumstances of the accident which produced fatal injury."

Two abridged lists of causes of death are presented in this report. Deaths by selected age groups are tabulated in an abridged list of 254 causes and deaths by residence are tabulated in an abridged list of 65 causes.

RATES

Birth rates and crude mortality rates are expressed as the number of births or deaths per 1,000 population. Mortality rates attributed to specific diseases are expressed as the number of deaths per 100,000 population.

Infant mortality rates are expressed as the number of deaths per 1,000 live births. Maternal mortality rates are expressed as the number of deaths per 10,000 live births.

POPULATION

The population of Maine was estimated to be 978,000 on July 1, 1962. This represents a net gain in population of 9,000 or 0.9 percent, over the number of inhabitants enumerated in the 1960 census. Total civilian population was estimated to be 957,000 on July 1, 1962. This represents a net gain of 7,000 in civilian population since April 1, 1960, or a net gain of 0.7 percent. The estimate of civilian population is based on 53,000 live births, 24,000 deaths, and an estimated net civilian outward migration of 20,000 between April 1, 1960 and July 1, 1962.

TABLE 1.
ESTIMATED POPULATION BY COUNTIES
MAINE, JULY 1,1962 AND
PER CENT OF CHANGE SINCE 1960

COUNTY	ESTIMATED POPULATION	PER CENT CHANGE

KNOX	28,700	+ 0.4
LINCOLN	18,200	- 1.6
OXFORD	44,100	- 0.6
PENOBSCOT	128,300	+ 1.5
PISCATAQUIS	17,200	- 1.0
SAGADAHOC	22,200	- 2.6
SOMERSET	39,900	+ 0.4
WALDO	22,900	+ 1.2
WASHINGTON	31,800	- 3.4
YORK	101,600	+ 2.2

LIVE BIRTHS

There were 22,998 resident live births registered for Maine in 1962. This was 2.4 per cent fewer births than were registered in 1961. The birth rate was 23.5 per 1,000 population.

SEX

The number of male live births was 11,724 and the number of female live births was 11,274. The sex ratio of live births was 104.0 male live births for every 100 female live births.

PLURAL BIRTHS

There were 225 plural births in which at least one child was born alive. All 1962 plural births were twin births.

RACE

Only 1.2 per cent of all resident live births in 1962 were nonwhite. The total number of nonwhite births in 1962 was 272. This represents a decrease of 12.0 per cent over the number of resident nonwhite live births in 1961.

The largest nonwhite group was Negroes, who gave birth to 151 live born children. American Indians gave birth to 53, Japanese gave birth to 19, and persons of other nonwhite races gave birth to 49 live born children.

LEGITIMACY

There were 925 illegitimate live births to mothers who were Maine residents in 1962. Illegitimate live births represented 4.0 per cent of all resident live births.

HOSPITAL BIRTHS

The number of resident live births in hospitals and licensed maternity homes in 1962 was 22,807 or 99.2 per cent of all resident live births. This is an increase of 3.2 per cent in number over hospital births in 1961. The percentage of hospital births in 1961 was 98.9.

FETAL DEATHS

The number of resident fetal deaths was 393, which was 4.8 per cent less than in 1961. The fetal death ratio was 17.1 per 1,000 live births as compared with a fetal death ratio of 17.5 in 1961.

GESTATION

The following table shows resident fetal deaths in 1962 by length of gestation and per cent change in each group from fetal deaths reported in 1961.

TABLE 2.

FETAL DEATHS BY LENGTH OF GESTATION

MAINE, 1962

Gestation in weeks	Fetal Deaths	Per cent Change from 1961
Total	393	- 4.8
Under 13 weeks	27	- 34.1
13-19 weeks	22	- 40.5
20-27 weeks	58	- 12.1
28 weeks and over	189	+ 0.5
Not reported	97	+ 19.8

GENERAL MORTALITY

There were 11,083 deaths of Maine residents in 1962 and the crude mortality rate was 11.3 per 1,000 population. This was slightly more than the number of deaths in 1961 and the crude mortality rate was slightly higher.

SEX

The number of resident male deaths was 6,130 and the number of resident female deaths was 4,953. The estimated death rate among males was 12.7 per 1,000 male population and among females was 10.0 per 1,000 female population.

INFANT DEATHS

There were 582 infant deaths in Maine during 1962 and the infant mortality rate was 25.3 per 1,000 live births. This was slightly lower than the 1961 rate of 25.6

There were 418 neonatal deaths (infant deaths during the first 4 weeks of life) in 1962 and the neonatal mortality rate was 18.2 per 1,000 live births. This was a 6.7 and 0.8 per cent decrease in number and rate over 1961.

PERINATAL MORTALITY

The estimated perinatal mortality rate in 1962 was 32.0 perinatal deaths per 1,000 live births and fetal deaths over 20 weeks gestation. This is same as the rate for 1961 which also was 32.0.

The perinatal mortality rate is based on the following formula:

$$\frac{\text{Fetal deaths 20 weeks or more + neonatal deaths}}{\text{Total live births + fetal deaths 20 weeks or more}} \times 1000$$

The 1962 perinatal mortality rate is based on an estimated 328 fetal deaths of 20 or more weeks gestation and 418 neonatal deaths.

MATERNAL MORTALITY

There were 6 maternal deaths in Maine in 1962 and the maternal mortality rate was 2.6 per 10,000 live births.

MARRIAGES

There were 7,980 marriages in Maine in 1962. This was 72 more than the number of marriages in 1961. The marriage rate was 8.2 per 1,000 population.

PREVIOUS MARITAL STATUS

There were 5,745 marriages in Maine in 1962 in which both the bride and groom were marrying for the first time. This was 123 more than the number of first marriages in 1961. The number of grooms marrying for the first time was 6,381 and the number of brides marrying for the first time in 1962 was 6,270.

RESIDENCE OF PARTIES

The number of resident brides marrying in 1962 was 7,434 and the number of resident grooms was 6,602. Residents of all the 50 states, Virgin Islands, Canada and several other foreign countries were married in Maine in 1962.

DIVORCES and ANNULMENTS

The Superior Court in Maine granted 2,078 divorces during the calendar year 1962. This was 2.8 per cent more than the number of divorces granted in 1961. The crude divorce rate was 2.1 per 1,000 population.

The number of marriages annulled by the Superior Court in Maine in 1962 was 14.

SEX OF LIBELANT

It was the wife who most frequently sought divorce. Divorces were granted to the wife in 1,567 or 75.4 per cent of all divorces granted in Maine in 1962.

LEGAL GROUNDS FOR DECREE

Cruelty was the legal grounds for decree in 93.4 per cent of divorces granted in Maine in 1962. Cruelty includes "cruel and abusive treatment" and "extreme cruelty".

DURATION OF MARRIAGE

The median duration of marriage before divorce among 1962 divorces was 5.9 years. The second year of marriage was the peak year during which marriages were ended by divorce.

MINOR CHILDREN

The divorced couple had one or more minor children in 1,385, or 66.7 per cent of 1962 divorces. One divorced couple had 11 minor children.
