MAINE VITAL STATISTICS
1976

TABLES:	PAGE
1. Estimated Population by Counties, July 1, 1976.....	6
2. Terminations of Pregnancy by Length of Gestation.....	8
3. Deaths from Accidents Occurring in Maine, County of Accident by Place of Accident.....	12
4. Population and Selected Vital Statistics Every Fifth Year, 1900 - 1935 and Yearly, 1935 - 1976.....	13
5. Summary of Natality Statistics by Counties.....	14
6. Summary of Mortality Statistics by Counties.....	15
7. Leading Causes of Death, Rates and Percent of Total Deaths and Total Life Lost.....	16
8. Leading Causes of Death by Sex.....	17
9. Percent of County Occurrence Deaths by Place of Death and Percent of Selected Causes of Death Occurring in Hospital...	18
10. Resident Live Births by Selected Characteristics.....	19-29
11. Terminations of Pregnancy, Infant Deaths, and Deaths from 69 Causes by County and Selected Minor Civil Division.....	30-33
12. Deaths from 282 Selected Causes by Age and Sex.....	34-46
13. Infant Deaths from Selected Causes by Age and Sex.....	47-51
14. Marriages, Divorces and Annulments by County of Occurrence..	52
15. Divorces and Annulments by Legal Grounds for Decree and by Plaintiff.....	52
16. Divorces and Annulments by Number of Children Reported Under 18 Years of Age.....	53
17. Divorces and Annulments by Duration of Marriage in Years....	53
18. Marriages by Age and by Previous Marital Status of Bride and Groom.....	54
19. Marriages by Previous Marital Status of Bride, by Previous Marital Status of Groom.....	54
20. Reported Cases of Selected Communicable Diseases by County..	55
21. Reported Cases of Selected Communicable Diseases by Month...	56

INTRODUCTION

This report contains a summary of the Vital Statistics of the State of Maine for the calendar year of 1976. Births are tabulated for each county and all minor civil divisions and deaths are tabulated for each county and 45 selected minor civil divisions.

ALLOCATION OF VITAL EVENTS

The statistics on births in this report refer to residents of Maine only, regardless of whether or not the birth actually occurred in Maine. With the exceptions of Tables 3 and 9, death statistics also refer to residents of Maine only. Statistics on marriages and divorces in this report include nonresidents as well as residents of Maine, who marry or are divorced in the state.

Births are allocated to the usual residence of the mother and deaths to the usual residence of the deceased. This information is obtained for the certificate by the physician, hospital record librarian, funeral director, or other person responsible for completing the certificate of birth or death. The practice of allocating births and deaths to usual place of residence was initiated in 1935. This method of allocation is made possible by the exchange of transcripts of nonresident births and deaths with other states and Canada.

Marriages and divorces are allocated to the place in Maine where the marriage ceremony was performed or where the divorce decree was granted, rather than the place of residence.

FACTORS AFFECTING ACCURACY

Several factors may produce certain slight inaccuracies in this report. Some of the more important of these factors are outlined below:

(1) Completeness of Registration: A birth certificate test conducted in 1950 indicated that about one percent of births in Maine are not recorded. In addition to unrecorded vital events, others may not be included in this report by reason of failure of the person required to report the event to make a timely report, or failure of a municipal clerk to make a timely report to the State Registrar, or failure of other states to make timely exchanges of nonresident transcripts of births and deaths.

(2) Errors in Data: Data in this report are based upon original certificates of births and deaths, copies of original certificates of marriages prepared by city and town clerks, and abstracts of decrees of divorces prepared by the clerks of courts. Errors in data may be introduced by persons giving information for the original certificate, persons involved in the actual preparation of the original certificate, or persons involved in the preparation of the copies or abstracts of the original certificates which are submitted to the State Registrar.

POPULATION ESTIMATES

The estimates of county populations on July 1, 1976 which appear in this report, were prepared jointly by the U. S. Bureau of the Census and by the State of Maine, Division of Research and Vital Records of the Department of Human Services. These county estimates are averages of the U. S. Bureau of the Census's Ratio Correlation Method, the Component II Method and the Administrative Records Method.

MORTALITY CLASSIFICATION

The mortality classification, used in this report, is the 8th Revision of the International Statistical Classification, consisting of a list of 671 categories of diseases and morbid conditions, plus 182 categories for classification of the external cause of injury, and 187 categories for the characterization of injuries according to the nature of lesion.

Under the 8th Revision, the method for selecting the cause of death for statistical purposes remained the same as the method under the 6th Revision. The 6th Revision, introduced in 1949, instituted a method whereby the physician in attendance at death indicates the disease or morbid condition which he considers to be the underlying cause of death. The underlying cause is defined as "(a) the disease or injury which initiated the train of events leading directly to death, or (b) the circumstances of the accident which produced fatal injury."

Two abridged lists of causes of death are presented in this report. Deaths by selected age groups are tabulated in an abridged list of 282 causes and deaths by residence are tabulated in an abridged list of 69 causes.

RATES

Birth rates and crude mortality rates, unless otherwise specified, are expressed as the number of births or deaths per 1,000 population. Mortality rates attributed to specific diseases are expressed as the number of deaths per 100,000 population. Infant mortality rates are expressed as the number of deaths per 1,000 live births. Maternal mortality rates are expressed as the number of deaths per 10,000 live births.

POPULATION

The population of Maine was estimated to be 1,071,380 on July 1, 1976. This is a net gain in population of 77,658 or 7.8 percent more than the number of inhabitants enumerated in the 1970 U. S. Census report. Total civilian population was estimated to be 1,061,179 on July 1, 1976. This is a net gain of 8.1 percent in civilian population since April 1, 1970. The natural increase in total population between April 1, 1970 and July 1, 1976 was 34,069 and the estimated net inward migration was 43,589.

TABLE 1
ESTIMATED POPULATION BY COUNTIES
MAINE, JULY 1, 1976 AND
PERCENT OF CHANGE SINCE 1970

COUNTY	ESTIMATED POPULATION	PERCENT CHANGE
STATE	1,071,380	+ 7.8
ANDROSCOGGIN.....	95,101	+ 4.2
AROOSTOOK.....	97,570	+ 3.7
CUMBERLAND	204,442	+ 6.2
FRANKLIN	25,069	+ 11.7
HANCOCK	39,424	+ 14.0

PENOBSBOT	135,397	+ 8.0
PISCATAQUIS	16,786	+ 3.1
SAGADAHOC	26,126	+ 11.4
SOMERSET	44,387	+ 9.3
WALDO	27,016	+ 15.8
WASHINGTON	34,087	+ 14.2
YORK	122,518	+ 9.8

LIVE BIRTHS

There were 15,046 resident live births registered in Maine in 1976. The number of live births decreased 1.2 percent from 1975, and the birth rate decreased 2.8 percent, to 14.0 per 1000 population. This is the lowest birth rate in the history of the State of Maine.

SEX

The number of male live births was 7,753 and the number of female live births was 7,291. There were 2 live births of unknown sex. The sex ratio of live births was 106.3 male live births for every 100.0 female live births.

PLURAL BIRTHS

In 1976, there were 246 children born alive in plural births.

RACE

Only 1.3 percent of all resident live births in 1976 were nonwhite. The total number of nonwhite births in 1976 was 200. This is an increase of 5.3 percent from the number of resident nonwhite live births in 1975.

The largest nonwhite group was American Indian, who gave birth to 63 live born children. Negroes gave birth to 52, and persons of other nonwhite races gave birth to 85 live born children.

LEGITIMACY

There were 1,531 illegitimate births to mothers who were Maine residents in 1976. Illegitimate live births represented 10.2 percent of all resident live births. With the exception of 1971, the percent of illegitimate births has increased in every year since 1959.

HOSPITAL BIRTHS

The number of resident live births in hospitals in 1976 was 14,962 or 99.4 percent of all resident live births.

TERMINATIONS OF PREGNANCY

The number of resident terminations of pregnancy in 1976 was 584, which was 4.4 percent less than the number reported in 1975. The termination of pregnancy rate was 38.8 per 1,000 live births, which is a decrease of 3.2 percent over 1975. Induced abortions accounted for 75.7 percent of the terminations of pregnancy. The reporting of abortions is still very deficient in most areas of the state. At best, the completeness of abortion reporting is not more than 20 percent.

The following table shows resident terminations of pregnancy in 1976 by length of gestation and percent of total in each group. Unreported gestation periods have been allocated for this table.

TERMINATIONS OF PREGNANCY BY LENGTH OF GESTATION MAINE, 1976

Gestation in weeks	Terminations of pregnancy	Percent of Total
Total	584	100.0
Under 13 weeks	421	72.1
13 - 19 weeks	38	6.5
20 - 27 weeks	50	8.6
28 weeks and over	75	12.8

GENERAL MORTALITY

There were 10,422 deaths of Maine residents in 1976 and the crude mortality rate was 9.7. This is exactly the same crude mortality rate as last year.

SEX

In 1976 the number of resident male deaths was 5,630 and the number of resident female deaths was 4,792. The estimated death rate among males was 10.8 per 1,000 male population and among females was 8.7 per 1,000 female population.

INFANT DEATHS

There were 165 infant deaths in Maine during 1976 and the infant death mortality rate was 11.0 per 1,000 live births. This was a 17.9 percent decrease in number from 1975 and a 16.7 percent decrease in rate. The infant mortality rate has decreased 56.3 percent since 1960, 64.7 percent since 1950, 79.2 percent since 1940, and 85.4 percent since 1930.

There were 115 neonatal deaths (infant deaths during the first four weeks of life) in 1976 and the neonatal mortality rate was 7.6 per 1,000 live births. This was a decrease in number of 16.1 percent since 1975.

PERINATAL MORTALITY

The estimated perinatal mortality rate in 1976 was 15.8 perinatal deaths per 1,000 live births and terminations of pregnancy of twenty weeks or more gestation.

The perinatal mortality rate is based on the following formula:

$$\frac{\text{Terminations of pregnancy 20 weeks or more} + \text{neonatal deaths}}{\text{Total live births} + \text{terminations of pregnancy 20 weeks or more}} \times 1000$$

The 1976 perinatal mortality rate is based on 125 terminations of pregnancy of 20 or more weeks gestation and 115 neonatal deaths.

MATERNAL MORTALITY

There were no maternal deaths in Maine in 1976. This marks the fifth time in the history of the state that there were no maternal deaths. Other years that had no maternal deaths were 1966, 1967, 1973 and 1974.

MARRIAGES

There were 11,302 marriages in Maine in 1976. This was 112 more than in 1975. The marriage rate was 10.5 per 1,000 population, a decrease of 0.9 percent from 1975.

PREVIOUS MARITAL STATUS

There were 6,459 marriages in Maine in 1976 in which both the bride and groom were marrying for the first time. This was 102 less than the number of first marriages in 1975. Sixty-six and six tenths percent of the grooms and 67.6 percent of the brides were married for the first time.

DIVORCES AND ANNULMENTS

There were 5,522 divorces granted in Maine during the calendar year 1976. This was only 4 less than the number of divorces granted in 1976 which had the highest number of divorces granted in the history of the State. The crude divorce rate was 5.2 per 1,000 population, same as in 1975. There were 18 marriages annulled in 1976.

PLAINTIFF

The wife was the plaintiff in 72.1 percent of the divorces, the husband in 21.6 percent and 6.3 percent were cross suits.

LEGAL GROUNDS FOR DECREE

Cruelty was the legal grounds for decree in 93.3 percent of all divorces granted in Maine in 1976. Cruelty includes "cruel and abusive treatment" and "extreme cruelty". Differences was legal grounds for decree in 6.1 percent of the divorces.

DURATION OF MARRIAGE

The median duration of marriage before 1976 divorces was 5.5 years. The second year of marriage was the peak year during which marriages were ended by divorce.

MINOR CHILDREN

The divorced couple had one or more minor children in 3,310 or 59.9 percent of 1976 divorces. Seven divorced couples had 8 minor children.

LEADING CAUSES OF DEATH

In table 7, "Life Lost" is based on expectation of life from the 1974 United States Life tables for white population. The death of an infant represents a total of 72.7 years "life lost" and the death of a person 85 years of age represents 5.6 years of "life lost".

When one examines the leading causes of death in terms of "life lost" rather than total deaths, an entirely different picture is presented. "Certain diseases of early infancy" which caused only 0.8 percent of total deaths, caused 3.7 percent of the total "life lost" in 1976 and jumped from thirteenth place in total deaths to fifth place in total "life lost". "Congenital Anomalies" which is in fourteenth place in total deaths, is in 6th place in total "life lost". Accidents caused only 4.5 percent of total deaths but 11.3 percent of total "life lost". Diseases of the heart caused 39.2 percent of total deaths but only 30.1 percent of total "life lost".

The only leading causes that significantly increased in "life lost" rate over 1975 were chronic obstructive lung disease (28.5 percent), cancer (11.4 percent) and bronchitis emphysema & asthma (10.5 percent). The largest decrease in "life lost" rate was certain diseases of early infancy which decreased 14.3 percent. Diabetes decreased by 12.5 percent and cirrhosis of the liver by 9.4 percent.

ACCIDENTS

Accidents occurring in Maine in 1976, accounted for 494 deaths. Of these accidents, 47.8 percent happened on Maine's streets and highways and 23.9 percent happened at home. In 7.3 percent of the accidents, the victim was considered to be working at the time.

The state death rate for accidents, occurring in Maine, was 46.1 deaths per 100,000 population. Androscoggin County had a significantly lower rate in 1976 than the state. Franklin and Piscataquis Counties had significantly higher rates.
