MAINE VITAL STATISTICS
1977

TABLES:	PAGE
1. Estimated Population by Counties, July 1, 1977	6
2. Terminations of Pregnancy by Length of Gestation	8
3. Deaths from Accidents Occurring in Maine, County of Accident by Place of Accident	12
4. Population and Selected Vital Statistics Every Fifth Year, 1900 - 1935 and Yearly, 1935 - 1977	13
5. Summary of Natality Statistics by Counties	14
6. Summary of Mortality Statistics by Counties	15
7. Leading Causes of Death, Rates and Percent of Total Deaths and Total Life Lost	16
8. Leading Causes of Death by Sex	17
9. Percent of County Occurrence Deaths by Place of Death and Percent of Selected Causes of Death Occurring in Hospital	18
10. Resident Live Births by Selected Characteristics	19-29
11. Fetal, Infant and Neonatal Deaths, and Deaths from 69 Causes by County and Selected Minor Civil Division	30-33
12. Deaths from 282 Selected Causes by Age and Sex	34-58
13. Infant Deaths from Selected Causes by Age and Sex	59-64
14. Marriages, Divorces and Annulments by County of Occurrence	65
15. Divorces and Annulments by Legal Grounds for Decree and by Plaintiff	65
16. Divorces and Annulments by Number of Children Reported Under 18 Years of Age	66
17. Divorces and Annulments by Duration of Marriage in Years	66
18. Selected Characteristics of Resident Marriages	67-77
19. Reported Cases of Selected Communicable Diseases by County	78
20. Reported Cases of Selected Communicable Diseases by Month	79

INTRODUCTION

This report contains a summary of the Vital Statistics of the State of Maine for the calendar year of 1977. Births are tabulated for each county and all minor civil divisions and deaths are tabulated for each county and 45 selected minor civil divisions.

ALLOCATION OF VITAL EVENTS

The statistics on births in this report refer to residents of Maine only, regardless of whether or not the birth actually occurred in Maine. With the exceptions of Tables 3 and 9, death statistics also refer to residents of Maine only. Except for Table 18, statistics on marriages include non-residents as well as residents of Maine, who marry in the State. All statistics on divorces include non-residents as well as residents who are divorced in Maine.

Births are allocated to the usual residence of the mother and deaths to the usual residence of the deceased. This information is obtained for the certificate by the physician, hospital record librarian, funeral director, or other person responsible for completing the certificate of birth or death. The practice of allocating births and deaths to usual place of residence was initiated in 1935. This method of allocation is made possible by the exchange of transcripts of non-resident births and deaths with other states and Canada.

All occurrence data for marriages and divorces are distributed to the place in Maine where the marriage ceremony was performed or where the divorce decree was granted, rather than the place of residence.

FACTORS AFFECTING ACCURACY

Several factors may produce certain slight inaccuracies in this report. Some of the more important of these factors are outlined below:

(1) Completeness of Registration: A birth certificate test conducted in 1950 indicated that about one percent of births in Maine are not recorded. In addition to unrecorded vital events, others may not be included in this report by reason of failure of the person required to report the event to make a timely report, or failure of a municipal clerk to make a timely report to the State Registrar, or failure of other states to make timely exchanges of nonresident transcripts of births and deaths.

(2) Errors in Data: Data in this report are based upon original certificates of births and deaths, copies of original certificates of marriages prepared by city and town clerks, and abstracts of decrees of divorces prepared by the clerks of courts. Errors in data may be introduced by persons giving information for the original certificate, persons involved in the actual preparation of the original certificate, or persons involved in the preparation of the copies or abstracts of the original certificates which are submitted to the State Registrar.

POPULATION ESTIMATES

The estimates of county populations on July 1, 1977 which appear in this report, were prepared jointly by the U. S. Bureau of the Census and by the State of Maine, Division of Research and Vital Records of the Department of Human Services. These county estimates are averages of the U. S. Bureau of the Census's Ratio Correlation Method, the Component II Method and the Administrative Records Method.

MORTALITY CLASSIFICATION

The mortality classification, used in this report, is the 8th Revision of the International Statistical Classification, consisting of a list of 671 categories of diseases and morbid conditions, plus 182 categories for classification of the external cause of injury, and 187 categories for the characterization of injuries according to the nature of lesion.

Under the 8th Revision, the method for selecting the cause of death for statistical purposes remained the same as the method under the 6th Revision. The 6th Revision, introduced in 1949, instituted a method whereby the physician in attendance at death indicates the disease or morbid condition which he considers to be the underlying cause of death. The underlying cause is defined as "(a) the disease or injury which initiated the train of events leading directly to death, or (b) the circumstances of the accident which produced fatal injury."

Two abridged lists of causes of death are presented in this report. Deaths by selected age groups are tabulated in an abridged list of 282 causes and deaths by residence are tabulated in an abridged list of 69 causes.

RATES

Birth rates and crude mortality rates, unless otherwise specified, are expressed as the number of births or deaths per 1,000 population. Mortality rates attributed to specific diseases are expressed as the number of deaths per 100,000 population. Infant mortality rates are expressed as the number of deaths per 1,000 live births. Maternal mortality rates are expressed as the number of deaths per 10,000 live births.

POPULATION

The population of Maine was estimated to be 1,084,422 on July 1, 1977. This is a net gain in population of 90,700 or 9.1 percent more than the number of inhabitants enumerated in the 1970 U. S. Census report. Total civilian population was estimated to be 1,074,221 on July 1, 1977. This is a net gain of 9.4 percent in civilian population since April 1, 1970. The natural increase in total population between April 1, 1970 and July 1, 1977 was 39,374 and the estimated net inward migration was 51,326.

TABLE 1
ESTIMATED POPULATION BY COUNTIES
MAINE, JULY 1, 1977 AND
PERCENT OF CHANGE SINCE 1970

COUNTY	ESTIMATED POPULATION	PERCENT CHANGE
STATE	1,084,422	+ 9.1

SAGadahoc	26,700	+ 13.8
SOMERSET	44,852	+ 10.5
WALDO	27,352	+ 17.2
WASHINGTON	34,556	+ 15.7
YORK	126,247	+ 13.1

LIVE BIRTHS

There were 16,252 resident live births registered in Maine in 1977. The number of live births increased 8.0 percent from 1976, and the birth rate increased 7.1 percent, to 15.0 per 1000 population. This is the first increase in the birth rate since 1970.

SEX

The number of male live births was 8,371 and the number of female live births was 7,879. There were 2 live births of unknown sex. The sex ratio of live births was 106.2 male live births for every 100.0 female live births.

PLURAL BIRTHS

In 1977, there were 285 children born alive in plural births.

RACE

Only 1.3 percent of all resident live births in 1977 were nonwhite. The total number of nonwhite births in 1977 was 207. This is an increase of 3.5 percent from the number of resident nonwhite live births in 1976.

The largest nonwhite group was American Indian, who gave birth to 65 live born children. Negroes gave birth to 62, and persons of other nonwhite races gave birth to 80 live born children.

LEGITIMACY

There were 1,780 illegitimate births to mothers who were Maine residents in 1977. Illegitimate live births represented 11.0 percent of all resident live births. With the exception of 1971, the percent of illegitimate births has increased in every year since 1960.

HOSPITAL BIRTHS

The number of resident live births in hospitals in 1977 was 16,142 or 99.3 percent of all resident live births.

TERMINATIONS OF PREGNANCY

The number of resident terminations of pregnancy in 1977 was 545, which was 6.7 percent less than the number reported in 1976. The termination of pregnancy rate was 33.5 per 1,000 live births, which is a decrease of 14.7 percent over 1976. Induced abortions accounted for 73.0 percent of the terminations of pregnancy. The reporting of abortions is still very deficient in most areas of the state. At best, the completeness of abortion reporting is not more than 15 percent.

The following table shows resident terminations of pregnancy in 1977 by length of gestation and percent of total in each group. Unreported gestation periods have been allocated (imputed) for this table.

TERMINATIONS OF PREGNANCY BY LENGTH OF GESTATION MAINE, 1977

Gestation in weeks	Terminations of pregnancy	Percent of Total
Total	545	100.0
Under 13 weeks	352	64.6
13 - 19 weeks	54	9.9
20 - 27 weeks	31	5.7
28 weeks and over	108	19.8

GENERAL MORTALITY

There were 10,055 deaths of Maine residents in 1977. The crude mortality rate was 9.3 per 1000 population, a decrease of 4.1 percent from 1976.

SEX

In 1977 the number of resident male deaths was 5,457 and the number of resident female deaths was 4,598. The estimated death rate among males was 10.3 per 1,000 male population and among females was 8.3 per 1,000 female population.

INFANT DEATHS

There were 153 infant deaths in Maine during 1977 and the infant death mortality rate was 9.4 per 1,000 live births. This was a 7.3 percent decrease in number from 1976 and 14.5 percent decrease in rate. The infant mortality rate has decreased 55.0 percent since 1970, 62.7 percent since 1960, 69.9 percent since 1950, and 82.2 percent since 1940.

For the first time in the history of the state, the number of female infant deaths exceeded the number of male infant deaths.

There were 99 neonatal deaths (infant deaths during the first four weeks of life) in 1977 and the neonatal mortality rate was 6.1 per 1,000 live births. This was a decrease in number of 13.9 percent since 1976.

PERINATAL MORTALITY

The estimated perinatal mortality rate in 1977 was 14.5 perinatal deaths per 1,000 live births and terminations of pregnancy of twenty weeks or more gestation.

The perinatal mortality rate is based on the following formula:

$$\frac{\text{Terminations of pregnancy 20 weeks or more} + \text{neonatal deaths}}{\text{Total live births} + \text{terminations of pregnancy 20 weeks or more}} \times 1000$$

The 1977 perinatal mortality rate is based on 139 terminations of pregnancy of 20 or more weeks gestation and 99 neonatal deaths.

MATERNAL MORTALITY

There were two maternal deaths in Maine in 1977.

MARRIAGES

There were 11,446 marriages occurring in Maine in 1977. Of this number, 10,495 or 91.7 percent were marriages in which the bride and/or the groom were residents of Maine. The occurrence marriage rate was 10.6 per 1,000 population, an increase of 1.0 percent from 1976.

There were 10,198 resident brides in 1977, of which 74.6 percent were natives of Maine. There were 9,459 resident grooms of which 73.7 percent were natives of Maine. About 31.0 percent of the resident brides, and 13.6 percent of the resident grooms were under 20 years of age. About 67.5 percent of the resident brides were married for the first time and 65.3 percent of the resident grooms were married for the first time.

Civil ceremonies were performed in 36.1 percent of the resident marriages in 1977. There were 115 resident mixed marriages in 1977.

DIVORCES AND ANNULMENTS

There were 5,655 divorces granted in Maine during the calendar year 1977. This was 133 more than the number of divorces granted in 1976, which was the highest number of divorces granted in the history of the State. The crude divorce rate was 5.2 per 1,000 population, same as in 1976. There were 16 marriages annulled in 1977.

PLAINTIFF

The wife was the plaintiff in 72.7 percent of the divorces, the husband in 26.7 percent and 0.6 percent were cross suits.

LEGAL GROUNDS FOR DECREE

Cruelty was the legal grounds for decree in 91.0 percent of all divorces granted in Maine in 1977. Cruelty includes "cruel and abusive treatment" and "extreme cruelty". Differences was legal grounds for decree in 8.1 percent of the divorces.

DURATION OF MARRIAGE

The median duration of marriage before 1977 divorces was 5.0 years. The third year of marriage was the peak year during which marriages were ended by divorce.

MINOR CHILDREN

The divorced couple had one or more minor children in 3,374 or 59.7 percent of 1977 divorces. Twenty-five divorced couples had 6 or more minor children.

LEADING CAUSES OF DEATH

In table 7, "Life Lost" is based on expectation of life from the 1975 United States Life tables for white population. The death of an infant represents a total of 73.2 years "life lost" and the death of a person 85 years of age represents 6.1 years of "life lost".

When one examines the leading causes of death in terms of "life lost" rather than total deaths, an entirely different picture is presented. "Certain diseases of early infancy" which caused only 0.6 percent of total deaths, caused 2.7 percent of the total "life lost" in 1977 and jumped from fourteenth place in total deaths to seventh place in total "life lost". "Congenital Anomalies" which is in thirteenth place in total deaths, is in sixth place in total "life lost". Accidents caused only 4.3 percent of total deaths but 10.3 percent of total "life lost". Diseases of the heart caused 39.9 percent of total deaths but only 31.4 percent of total "life lost".

The only leading cause that significantly increased in "life lost" rate over 1976 was chronic obstructive lung disease (11.1 percent). The largest decrease in "life lost" rate was certain diseases of early infancy which decreased 29.4 percent. Bronchitis, emphysema and asthma decreased by 28.6 percent and influenza and pneumonia by 24.3 percent, followed by congenital anomalies and accidents which decreased 15.2 percent and 11.0 percent respectively.

ACCIDENTS

Accidents occurring in Maine in 1977, accounted for 479 deaths. Of these accidents, 45.7 percent happened on Maine's streets and highways and 28.0 percent happened at home. In 7.5 percent of the accidents, the victim was considered to be working at the time.

The state death rate for accidents, occurring in Maine, was 44.2 deaths per 100,000 population. Androscoggin County had a significantly lower rate in 1977 than the state. Knox, Piscataquis and Waldo Counties had significantly higher rates.
