OCT 21 1988

#### NON-DISCRIMINATION NOTICE

In accordance with Title VI of the Civil Rights Act of 1964 (42 U.S.C. §2000d et seq.), Section 504 of the Rehabilitation Act of 1973, as amended (29 U.S.C. §794), the Age Discrimination Act of 1975, as amended (42 U.S.C. §6101 et seq.), and Title IX of the Education Amendments of 1972, the Maine Department of Human Services does not discriminate on the basis of sex, race, color, national origin, handicap or age in admission or access to or treatment or employment in its programs or activities. Ann Twombly, Affirmative Action Officer, has been designated to coordinate our efforts to comply with the U.S. Department of Health and Human Services regulations (45 C.F.R. Parts 80, 84 and 91) and the U.S. Department of Education (34 C.F.R. Part 106) implementing these Federal laws. Inquiries concerning the application of these regulations and our grievance procedures for resolution of complaints alleging discrimination may be referred to Ann Twombly at 221 State Street, Augusta, 04333, Telephone Number: (207) 289-3488 (Voice) or 1-800-332-1003 (TTY), or to the Assistant Secretary of the Office of Civil Rights, Washington, D.C.

## STATE OF MAINE DEPARTMENT OF HUMAN SERVICES

OFFICE OF DATA, RESEARCH, AND VITAL STATISTICS

ANNUAL STATISTICAL REPORT

FOR THE CALENDAR YEAR

1987

Ellen M. Naor State Registrar of Vital Statistics

John R. McKernan, Jr. Governor

Rollin Ives Commissioner

Published in July, 1988
As Required by Statute 22 MRSA §2701

3843139

#### **ACKNOWLEDGEMENTS**

This report contains a summary of vital statistics for the State of Maine for the calendar year 1987. The Department of Human Services has the dual responsibility of maintaining an effective system of vital registration and of making vital statistics available to the public. Within the Department itself, these data are needed for planning, managing, and evaluating programs that will improve the health and welfare of Maine people. The data are widely used, as well, for estimating and projecting population characteristics and changes.

This document is the result of the cooperative efforts of many individuals and groups. Chief among these are the municipal clerks of Maine's towns and counties, who serve as local registrars for vital records. The conscientious efforts of physicians, medical records administrators, and funeral directors also deserve special mention.

Maine Vital Statistics has been compiled and produced under the general supervision and direction of Ellen M. Naor, State Registrar of Vital Statistics and Director, Office of Data, Research, and Vital Statistics. Staff most significantly involved in the production of the 1987 annual report include:

Carl Gerry, Director, Technical Operations - Primary responsibility for systems analysis and revision, table design and production.

Michael Morin, William Turner, Paul Bizier and Ted Clark - Vital statistics systems maintenance and programming of vital statistics series reports.

Dale Welch, Senior Researcher - Population statistics.

Sue Whitley, Word Processing Supervisor - Manuscript preparation.

The joint efforts of all the staff of the Office's Vital Records Unit are necessary to produce the data contained in this publication. Special acknowledgement is made to:

Lorraine Gerard, Deputy State Registrar - Supervision of the Vital Records Unit which is responsible for data collection, coding and editing.

Carol Crane, Field Agent - Coordination with cities and towns to produce the data in a timely fashion.

#### Table No.

- S-A-2 Induced Abortions--Total, and by Selected Characteristics:
  Maine Towns over 3,500 Population, Counties and State Totals,
  1987 (Resident Data) [Selected Characteristics: Out of Wedlock,
  Patient's Age, No Previous Pregnancies, No Previous Abortions,
  Education, Abortions in Hospital]
- S-A-3 Induced Abortions to Canadian Residents by Number and Outcome of Previous Pregnancies, Marital Status, and Age of Patient: Canada Totals, 1987 (Occurrence Data)
- S-A-4 Induced Abortions to Canadian Residents by Gestation, Age of Patient, and Race: Canada Totals, 1987 (Occurrence Data)
- S-A-5 Induced Abortions to Canadian Residents by Gestation and Type of Termination Procedures: Canada Totals, 1987 (Occurrence Data)
- S-B-1 All Live Births and Out of Wedlock Live Births by Adequacy of Prenatal Care, Mother's Age, Child's Birthweight, and Apgar Score: Maine State Totals, 1987 (Resident Data)
- S-B-2 Live Births -- Total, and by Selected Risk Characteristics:
  Maine Towns, Counties and State Totals, 1987
  (Resident Data) [Selected Characteristics: Out of
  Wedlock, Under 2,500 Grams, Congenital Anomalies,
  Mother Under Age 20 Years, No Prenatal Care]
- S-BD-1 Births and Deaths by Month, Maine Towns, Counties and State Totals, 1987 (Resident Data)
- S-D-l Listing of Death Records by the Ninth Revision of the International Classification of Disease (ICD) Code: Maine Towns, 1987 (Resident Data)
- S-D-2 Deaths by 72 Cause of Death Groups: Six Largest Cities or Towns in Each Maine County, County Totals, and State Totals, 1987 (Resident Data)
- S-D-3 Deaths by Age and Sex for 72 Cause of Death Groups Maine State Totals, 1987 (Resident Data)
- S-D-4 Deaths by Age and sex for 32 Cause of Death Groups Maine State Totals, 1987 (Resident Data)

<sup>\*</sup>Supplemental tables are available at the cost of reproduction.

- S-D-5 Alcohol and Drug Related Deaths by Status of Mention: Maine State totals, 1987 (Resident Data)
- S-D-6 Deaths by Origin or Descent: Maine Counties and State Totals, 1987 (Resident Data)
- S-D-7 Deaths by Referral to Medical Examiner, Autopsy Status, Certifier, Traumatic and Non-traumatic Deaths: Maine State Totals, 1987 (Occurrence Data)
- S-D-8 Deaths by Method of Disposition: Maine Counties and State Totals, 1987 (Occurrence Data)
- S-D-9 Years of Life Lost Before Age 75 Number, Percent, Rank, and Average Per Death by 32 Cause of Death Groups and Sex
- S-F-1 Neonatal Deaths and Estimated Neonatal Rates by Birthweight: Maine Hospitals of Birth, other Birth Sites, and State Total, 1987 (Occurrence Data)
- S-F-2 Infant, Neonatal, and Fetal Deaths by Sex, Non-white Race, Low Birthweight, and Congenital Anomalies: Maine Towns, Counties, and State Total, 1987 (Resident Data)
- S-M-l Marriages by Selected Characteristics: Maine Towns, Counties, and State Totals, 1987 (Occurrence and Residence Data) [Selected Characteristics: Religious Ceremony, Bride and Groom Residence, Under Age 20 Years, Education Under 12 Years, First Marriage]
- S-M-2 Wives Involved in Divorces and Annulments by Residence of Husband and Number of Minor Children: Maine Towns, Counties, and State Totals, 1987 (Resident Data)

<sup>\*</sup>Supplemental tables are available at the cost of reproduction.

#### INTRODUCTION

In order to speed the process of making these data available to the public, the annual vital statistics report does not contain interpretive comments or charts. Information necessary to use the tables is included in the technical notes. The tabulations most frequently requested are presented in this report. Supplemental tables, available at the cost of reproduction, are listed on page x. Special tabulations can also be obtained, generally at a charge that may include preparation as well as reproduction costs. Comments and requests for additional information should be directed to:

Office of Data, Research, and Vital Statistics Maine Department of Human Services State House Station #11 Augusta, Maine 04333

Telephone: (207) 289-3001

#### DEFINITIONS OF TERMS

All Mentioned Causes of Death

All causes of death mentioned on the death certificate, whether underlying or associated. All mentioned causes are also referred to as "multiple causes of death."

Apgar Score

A summary indicator for evaluating the health of a newborn infant, the score ranges from 0 (very poor) to 10 (excellent). It is assigned by the delivery room personnel one minute and five minutes after birth.

Associated Cause of Death

Condition other than the underlying cause of death which may have contributed to the death.

Birth Order

Number of live births to the mother of the newborn, including this birth.

Birthweight

Weight of fetus or infant at time of delivery (normally measured in grams).

Fetal Death

Death prior to the complete expulsion or extraction from its mother of a product of conception; the fetus shows no signs of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. Fetal deaths of at least 20 weeks of gestation must be reported on the "Fetal Death Report." Fetal deaths of less than 20 weeks gestation are reported on the "Report of Abortion (Spontaneous and Induced)."

Gestation

Clinical assessment of the number of weeks since conception.

Hospital

A licensed acute care health facility with permanent inpatient beds offering facilities and services for the diagnosis and treatment of illness, injury and deformity for a continuing period of time. A hospital has an organized medical staff and offers continuous 24 hour professional nursing care and emergency treatment.

Induced Abortion

Induced abortion means the intentional interruption of a pregnancy by the application of external agents, whether chemical or physical, or the ingestion of chemical agents with an intention other than to produce a live birth or to remove a dead fetus. All induced abortions are required to be reported on the "Report of Abortion (Spontaneous and Induced)," regardless of the length of gestation.

#### DEFINITIONS OF TERMS (Continued)

Infant Death

Death occurring to a live born infant less than one year of age.

Intermediate Care Facility

A licensed nursing home that provides permanent facilities, including inpatient beds and nursing care to residents who do not require hospital care but are dependent on others for fulfilling the requirements of daily living. Permanent facilities include three or more inpatient beds, health related services, and licensed nursing supervision (8 hours per day).

Live Birth

A live birth is the complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy, which after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.

Maternal Deaths

Those deaths of women wherein the physician has designated a maternal condition as the underlying cause of death.

Minor Civil Division

In Maine, minor civil divisions generally are areas covered by the local or city/town level of civil government.

Miscarriage

Spontaneous abortion (see definition).

Multiple Causes of Death

All causes of death mentioned on the death certificate, whether underlying or associated. Multiple causes are also referred to as "all mentioned causes."

Neonatal Death

Death occurring to a live born infant before completing 27 days of life.

Occurrence

Refers to data tabulated by place the event occurred.

Out-of-Wedlock Birth

Births in which the mother was not married either at the time of conception or at the time of delivery.

Perinatal Death

Fetal deaths of at least 20 weeks gestation and all neonatal deaths.

#### **DEFINITIONS OF TERMS** (Continued)

Post-Neonatal Death

Death occurring to a live born infant between the ages of 28 days and 364 days, inclusive.

Race

Race of mother, father, or decedent is as stated on certificate. Race of child is determined from the race of the parents.

Residence

Refers to data tabulated by usual place of residence of the person to whom event occurred. For births, fetal deaths, and abortions, residence is defined as the mother's place of residence.

Site of Birth

Hospital or type of non-hospital site (e.g. home, on way to hospital, out-patient facility) where birth occurred.

Site of Death

Hospital or type of non-hospital site (e.g. home, on way to hospital, nursing home) where death occurred.

Skilled Nursing Facility

A licensed nursing home that provides permanent facilities, including inpatient beds and nursing care to residents who do not require hospital care but are dependent on others for fulfilling the requirements of daily living. Permanent facilities include three or more inpatient beds, medical services, continuous skilled nursing services and health-related services, diagnosis and treatment.

Spontaneous Abortion

A termination of pregnancy, at less than 20 weeks gestation, through natural causes and without the aid of mechanical or medicinal agents. All spontaneous abortions are required to be reported on the "Report of Abortion (Spontaneous and Induced)."

Underlying Cause of Death

That condition giving rise to the chain of morbid events leading to death, or the circumstances of the accident or violence that produced the fatal injury. For this report, underlying causes are selected through processing of death certificate data by the ACME and TRANSAX computer programs (see Technical Notes).

#### DEFINITIONS OF RATES\*

Age-Specific Death Rate	=	Resident Deaths in Specific Age Group Total Resident Population in Specific Age Group	X	100,000
Birth Rate	=	Resident Live Births Total Resident Population	X	1,000
Cause-Specific Death Rate	<b>e</b>	Resident Deaths from Specific Cause Total Resident Population	X	100,000
Death Rate	=	Resident Deaths Total Resident Population	X	1,000
Divorce Rate	=	Divorces Total Resident Population	X	1,000
Fetal Death Rate	=	Resident Fetal Deaths Total Resident Live Births and Resident Fetal Deaths	x	1,000
Infant Death Rate	=	Resident Infant Deaths Total Resident Live Births	X	1,000
Marriage Rate	=	Marriages Performed Total Resident Population	Х	1,000
Maternal Death Rate	=	Resident Maternal Deaths Total Resident Live Births	X	10,000
Neonatal Death Rate	=	Resident Neonatal Deaths Total Resident Live Births	X	1,000
Perinatal Death Rate	=	Resident Fetal Deaths and Neonatal Deaths Total Resident Fetal Deaths and Live Births	X	1,000
Post-Neonatal Death Rate	=	Resident Post-Neonatal Deaths Total Resident Live Births	X	1,000
Sex-Specific Death Rate	=	Resident Deaths of Indicated Sex Total Resident Population of Indicated Sex	X	100,000

<sup>\*</sup>Event denominators for rates are registered totals for the calendar year. Population denominators are mid-calendar year estimates.

-		

#### General Considerations

Sources of Vital Records Data: Birth, death, fetal death, abortion, marriage, and divorce certificates are the source documents for data on vital events in Maine. A copy of each is included in Appendix Tables C-1 through C-6.

The cut-off dates for the data in this report are: Divorces and Induced Terminations, March 15, 1988; Deaths, Fetal Deaths, and Marriages, April 1, 1988; and Births, April 15, 1988. Any data pertaining to 1987 events for which certificates were filed after the above cut-off dates are not included in this report.

Birth certificates and induced termination reports are usually completed by hospital or clinic personnel. Death and fetal death certificates are usually completed by funeral directors, who obtain the medical certifications of cause of death from physicians. Marriage certificates are completed by the appropriate municipal clerks, while divorce reports are sent to the Office of Data, Research, and Vital Statistics by the clerks of courts.

<u>Completeness of Registration</u>: A birth certificate test in 1950 indicated that about one percent of births in Maine at that time were not recorded. It is assumed that registration has continued to be at least this complete.

Although no test of death registration has ever been done, it is assumed that death registration is reasonably complete, because burial permit laws and regulations require the filing of a death certificate before a burial permit for the disposition of the body is issued.

Reporting of all terminations of pregnancy at any gestation, whether spontaneous or induced, has been required in Maine for many years. Analysis of fetal death rates over time, however, indicates that there has been considerable variation in the completeness of registration. A specific reporting form for abortions (spontaneous and induced) was introduced in 1978. Comparison with independent data sources suggests that induced abortions may be underreported by 10 to 15%.

In addition to unrecorded vital events, other vital events may not be included in this report for several reasons: failure of the person required to report the event to make a timely report; failure of a municipal clerk to make a timely report to the State Registrar; or failure of other states to make timely exchanges of nonresident transcripts of births and deaths.

<u>Data</u> <u>Quality</u>: Data in this report are based upon original certificates of births and deaths, copies of original certificates of marriages prepared by city and town clerks, and abstracts of decrees of divorces prepared by the clerks of courts. Errors in data may be

introduced by persons giving information for the original certificate, persons involved in the actual preparation of the original certificate, persons responsible for the preparation of the copies or abstracts of the original certificates, or those involved in the coding and processing of the data in the State Office of Data, Research, and Vital Statistics.

Extensive reorganization and revision in 1983 οf procedures, data input procedures, and computer systems have reduced or eliminated many of the problems experienced in previous years. Office of Data, Research, and Vital Statistics maintains several programs aimed at improving the quality and completeness on certificates and its translation into information received statistical form. A "query" system is used to followback physicians. hospital personnel and funeral directors concerning incomplete or conflicting information on the certificates themselves. The followback, which is done by both mail and telephone, is based on both manual and computer editing procedures.

In addition, the vital statistics field agent works directly with the data providers to improve the quality of reported information. The field agent conducts various seminars, workshops, and site visits to educate hospital and medical personnel, funeral directors, and municipal clerks in the importance of accurate and complete vital statistics data.

Finally, the National Center for Health Statistics (NCHS) monitors State coding of statistical data. The NCHS has established a two percent upper limit for coding differences involving any one data item, with the exception of cause of death. A five percent limit is used for this item due to the complexity of the coding process.

Comparison with Earlier Years: In 1983, a number of changes were introduced into the vital registration program and associated data processing, computer systems, and analytic procedures. These must be borne in mind in any comparisons with earlier years and analyses of time trends. Specific changes include the following:

- Implementation of a new birth certificate on January 1, 1983 and a new fetal death certificate on January 1, 1985. The new certificates use a checklist format for reporting medical history items related to pregnancy and delivery. These items are recorded on a separate page mailed directly to the Vital Records Unit.
- Intensive field and education activities directed to appropriate medical providers to promote more complete reporting of induced abortions performed at any time during pregnancy.
- The computerized data systems for records of births, deaths, fetal deaths, marriages, divorces, and abortions were completely revised in 1983 to promote more accurate and timely registration activities and statistical products. Comprehensive and rigorous edit procedures were developed for data input and a number of consistency checks were incorporated.

Small Frequencies: The numbers of births or deaths reported for a community represent complete counts of these events. As such, they are not subject to sampling error or variation, although they are subject to errors in the collection and processing procedures. However, the number of events that actually occurred may be considered as one of a large series of possible results that could have arisen under the same general circumstances. The probable range of values may be estimated from the actual figures according to certain statistical assumptions (Vital Statistics for the U.S., Vol. 1, 1959, p. 1-20). When the figures are used for comparison of frequencies and rates over a time period or for different areas, appropriate statistical methods should be used to assess the significance of the comparisons.

Frequencies of and rates based on fewer than 10 events should be used carefully because they are subject to large random fluctuations. The number "10" is arbitrary, however, and is not set forth as a critical point distinguishing statistically reliable rates.

Rates: In interpreting the conditions described by vital statistics rates, considerable caution must be observed. In particular, differences in rates from time to time or place to place may arise from a number of population differences and other compounding factors, and appropriate techniques (e.g., standardization) should be utilized in such comparisons.

Population Data: The population data used to calculate rates in this report are from the 1987-1996 Maine Population Projections, Office of Data, Research, and Vital Statistics, Department of Human Services, June, 1988. A display of these population data is included in Appendix Tables P-1 and P-2.

"Selected" Characteristics/Causes of Death: These terms are used to denote tabulations in which the categories displayed are not exhaustive but represent only those of particular interest.

Geographic Classification: In addition to recording vital events occurring in Maine, the Office of Data, Research, and Vital Statistics receives transcripts of birth certificates for children born outside Maine to a mother who is a resident of Maine. Death certificates for persons who are residents but die outside the boundaries of Maine are also received. Transcripts of non-resident births and deaths are exchanged with all other states and with Canada.

Events are assigned to geographical areas according either to place of residence or to place of occurrence. The basis for classification is identified in each table and should be carefully observed when extracting information.

"Resident Data" means events have been tabulated according to the area where the person lived regardless of where the event occurred. In the case of infant deaths and births, the reference is to the residence of the mother. It should be noted that in the case of infant deaths, the place of residence at death may differ from the place of residence at birth; when special tabulations are prepared from both birth and death certificates, it is important to note to which residence category they were assigned.

"Occurrence Data" means events have been tabulated according to where the events took place, regardless of the usual residence of the person. Since nearly all births and most deaths take place in hospitals, the number which occur in counties with many hospital beds will be large for this reason alone.

#### Births

As noted in previous sections, a revised birth certificate was initiated on January 1, 1983. All of the items previously recorded were included; a checklist format was introduced to obtain more accurate and complete data on complications of labor and delivery, method of delivery, and congenital anomalies. Two added items were the physician's estimate of gestation and an assessment of the infant's condition at birth. Initial evaluation indicates that the checklist format increased reporting of the medical history items dramatically — as much as five-fold on some items — so comparison with data from previous years must be made with caution.

#### Pregnancy Outcome

This section deals with the outcome of pregnancies to Maine Resident women including live births, fetal deaths, miscarriages, and induced terminations.

Table Pl is displayed by county and is the only table where it is possible to compare pregnancy rates by regions throughout the State of Maine.

#### Infant and Fetal Mortality

This section includes all fetal deaths of at least 20 weeks gestation and all neonatal deaths. The birth, death, and fetal death certificates all include information on the place of residence, so events to non-Maine residents can be excluded from tabulations based on resident data. Through the interstate exchange agreement, transcripts of births and deaths which occur outside of the state to Maine residents are obtained for inclusion in tabulations of resident data. Maine started to participate in such exchange for fetal deaths in 1985, so information on pregnancies of Maine women terminating in fetal deaths which occurred outside the state is now available for inclusion in tabulations of resident data.

A revised fetal death certificate was initiated on January 1, 1985, comparable to the 1983 revision of the birth certificate. All of the items previously recorded were included; a checklist format was introduced to obtain more accurate and complete data on complications of labor and delivery, method of delivery, and congenital anomalies.

Notification of infant death is obtained from the regular death certificate. However, much information relevant to the circumstances of infant death is found on the birth certificate. Birth and death records have, therefore, been matched to produce a composite infant death tape, which is the source of Table F-3. Tables F-1, F-5, and all other death tables, on the other hand, are produced from the general death file. Discrepancies between these two sources are minimal, usually involving only a very small number of deaths.

#### General Mortality

There are a number of factors which should be considered in order to understand and use the mortality data presented herein.

Mortality Classification: The mortality classification used in this report is the Ninth Revision of the International Classification of Diseases (ICD-9). It consists of a list of 722 categories of diseases and morbid conditions, 192 categories for classification of the external cause of an injury, and 190 categories for the characterization of injuries according to the nature of the lesion.

There are two major limitations in interpreting changes in cause of death statistics. Changes in diagnostic practice may affect the comparability of such statistics over time, as do changes in nomenclature and in the classification scheme. The International Classification of Diseases is revised approximately every ten years to incorporate advances in medical science and to reflect changing medical opinion and practice. The Sixth Revision was used from 1949-1957, the Seventh Revision from 1958-1967, the Eighth Revision from 1968-1978, and the Ninth Revision after 1978.

Under the Ninth Revision, the method for selecting the cause of death for statistical purposes remains the same as the method instituted with the The Sixth Revision instituted a method whereby the Sixth Revision. physician in attendance at death indicates the disease or morbid condition which he considers to be the underlying cause of death. The underlying cause is defined as "(a) the disease or injury which initiated the train of events leading directly to death, or (b) the circumstances of the accident which produced fatal injury." Prior to 1981, when two or more causes were jointly recorded, a nosologist in the Office of Vital Statistics selected and coded the underlying cause using the ancillary information provided on the death certificate by the physician. Beginning in 1981, however, all causes mentioned on the certificate are coded. The underlying cause is determined using a computerized procedure: the Automated Classification of Medical Entities (ACME) program. The cause of death information is then subjected to the TRANSAX computer program, which eliminates redundancies in mentioned causes. Information on all associated causes is retained on the computer records for use in further study of certain health problems.

Several groupings by cause of death are utilized in this report. All of the groupings are both exhaustive and exclusive: all causes are assigned to a group or category, and each specific cause is assigned to only one cause group. Deaths by age and sex groups are tabulated using a list of 282 cause groups (Table D-3). Deaths by county and town of residence, site of death, and underlying/non-underlying status are tabulated using 72 cause groups. The analysis of leading causes of death in Table D-1 and D-2 is based on 32 cause groups. The data on fetal and infant deaths, in Tables F-1 and F-2, are categorized into 61 cause groups. In all cases the ICD-9 codes included in each cause group are indicated on the appropriate tables. Tables generally do not include cause groups from which there were no deaths, so the number of groups displayed may be less than the number of groups (i.e., 282, 72, 61, or 32) from which the tables were constructed.\*

<sup>\*</sup> Complete lists of causal groups are contained in the following reference manual and may be obtained upon request:

Office of Data, Research, and Vital Statistics, Maine Department of Human Services, Vital Records Manual, 1988. December, 1987.

Years of Life Lost: In Table D-2, "Years of Life Lost" is used as a more sensitive measure of premature death than the death rate itself. The number of years of life lost is calculated for each decedent as the difference between the age at death and the life expectancy at that age. Life expectancy at each age is taken from the 1980 Maine Life Tables, with the sex-specific expectancy estimated using the 1980 United States Life Tables for the white population.\*\* The death of a male infant, for example, represents a total of 71.0 years of life lost. The death of a 50 year old woman represents 30.9 years of life lost, and the death of a 85 year old woman represents 6.4 years of life lost.

Multiple Causes of Death: Most major causes of death are contributing factors to many deaths in which they are not the underlying cause. The relative frequencies with which specific causes are mentioned on death records as underlying or non-underlying causes are displayed in Table D-4.

In Table D-4, cause of death mentions are classified into 72 cause groups, after processing through the ACME and TRANSAX computer programs. Consequently, the term "mentions" refers to causes identified through processing by the computer programs, rather than to causes as mentioned on the death certificate. A cause group is counted only once for each decedent, even if more than one cause in the group was mentioned on the original certificate. Comparisons of data from different sources on "all mentions" of a cause group are valid only if the number and composition of the cause groups used are the same and the counting rules are consistent.

The category of "all mentions" of a cause group usually includes all identifications of it as the underlying cause of death. Occasionally, simultaneous mention of certain causes on the death record leads to the identification, as the underlying cause, of a disease entity which was not itself recorded on the death certificate. In such cases, the ratio of all mentions to underlying cause mentions can be less than 1.00.

Certain causes of death can never be classified as the underlying cause of death as defined in the International Classification of Diseases. In particular, descriptions of the nature of injuries and secondary neoplasms are always recorded on the death certificate in conjunction with one or more entries which identify the underlying cause of death, i.e. the external cause of injury or the primary neoplasm.

#### Induced Terminations

All induced terminations performed in Maine are required to be reported, regardless of the length of gestation. The report form includes information on the place of residence, so non-resident women receiving abortions in Maine can be excluded from tabulations based on resident data. Approximately 15% of the induced terminations in Maine were obtained by out-of-state residents. Maine does not participate in any interstate program for exchange of induced terminations reports, so complementary data on Maine residents who received terminations in other states are not available.

<sup>\*\*</sup>Welch, D. Maine Life Tables:1980. Augusta: Maine Department of Human Services, 1985; National Center for Health Statistics, United States Life Tables-1980, 1984.

The numbers of induced terminations reported in 1982 was nearly a third lower than the numbers reported in preceding and subsequent years, due principally to incomplete reporting. In the spring of 1983, a vigorous effort was undertaken to remind and inform physicians, clinics, and hospitals that all induced abortions must be reported to the Department of Human Services on the appropriate form.

#### Marriages and Divorces

All marriages which occur in Maine are registered in the central Office of Data, Research, and Vital Statistics, whether or not either the bride or the groom are residents of the state. Marriages in which both partners are non-residents are excluded from tabulations based on resident data. However, there is no interstate program for exchange of marriage records of non-residents and hence the complementary data on Maine residents who are married outside Maine are not included in the resident data tabulations. "Resident Data" thus include all marriages occurring in Maine in which either the bride, the groom, or both are residents of Maine.

A similar situation exists in the registration of divorces and annulments. These records are reported to the central office by the clerks of the courts in which the divorce or annulment is finalized. No information is available on divorces or annulments obtained outside the state by Maine residents.

Notes: afetal death rate calculated based on all reported terminations of pregnancy, regardless of gestational age.

In 1973, 12.0% of such terminations were for fetuses of less than 20 weeks gestation.

bFetal death rate calculated based on reported fetal deaths of gestational age 20 weeks or more.

Coccurrence data. dRate per 1,000 live births in the same year.

All data for births and deaths pertain to Maine residents, only, starting in 1935. Data on marriages and divorces describe all such events which occurred in Maine.

Table H-2 HISTORICAL VITAL STATISTICS DATA
