Preface

The information in **1998 Maine Occupational Wages** is based on data collected by Wendy Nelson, Occupational Employment Statistics Manager, and Betty Dawson, Economic Research Analyst through the Occupational Employment Statistics (OES) program. This publication was developed and prepared by Suzanne Thivierge, Occupational Wage Studies Program Manager, David Welch, Economic Research Analyst, and Jason Heath, LMIS summer intern. The Estimates Publication System released by the OES Policy Council was used in this publication.

This report provides occupational wage information to a broad spectrum of users in an easy to understand format. To accomplish this, the Labor Market Information Advisory Workgroup reviewed this publication. Members of the workgroup are from Labor Market Information Services, the Bureau of Employment Services, the Bureau of Rehabilitation Services, the Training and Development Corporation and the CareerCenters. Their suggestions have been used to create a comprehensive report we hope our customers will find useful and easy to use.

The members of the Labor Market Information Services Division (LMIS) wish to express our sincere appreciation to the employers of Maine who have participated in the Occupational Employment Statistics (OES) survey by giving their time to provide employment and wage data. This information, aggregated by occupation, area and industry, will be a valuable resource for businesses, job seekers, students, government, and economic developers.

If you have questions regarding Maine labor market information, please call (207) 287-2271. If you have questions specific to this publication or occupational wages, contact Suzanne Thivierge at (207) 287-5294.

How To Use This Publication

This section contains a brief description of the tables that follow along with some helpful hints on using them efficiently.

Alphabetical Table

Readers who are looking for information on a specific occupation should start with the alphabetical table. The alphabetical table includes data for all industries and areas combined, a good starting point in wage analysis. The OES code listed with each entry could serve as a reference when reviewing the other tables.

OES Code Table

Aside from the alphabetical table, all remaining tables are published in OES code order. Viewing the tables in this way allows easy comparisons of earnings in related occupations. The following shows how related occupations are grouped together.

10000	Management and top level executives
20000	Professional, paraprofessional, and technical workers
32000	Health care professionals, practitioners, technicians, and technologists
40000	Sales and related workers
50000	Clerical and administrative support occupations
60000	Service occupations, including police and other protective service workers, firefighters, custodial, and lesser skilled health care workers
70000	Agricultural, forestry, fishing, and related occupations
80000 – 90000	Production, construction, maintenance, material handling, transportation occupations

Data that appear after these summary level codes represent average earnings for all occupations in that series. For example, the 1998 mean (average) following OES Code 10000 states the hourly average of all managerial and administrative workers reported in that industry.

Readers who are not able to find a specific occupation should refer to the glossary at the back of this publication that lists and defines every occupation listed.

Area Table

The area table includes six areas as well as statewide data arranged in order of OES code. Each of the six areas and their geographic extent are given in Figure 1, which follows. The Balance of State (BOS) designations refer to locales not belonging to a specific Metropolitan Statistical Area (MSA) or Primary Metropolitan Statistical Area (PMSA).

Industry Table

Many readers will be primarily interested in the industry wage tables published in SIC (Standard Industrial Classification) code order. For instance, business or department managers may wish to compare their company's wage scales with those reported for their industry. This is a good starting point for a comparison study or review. Information provided by these tables can be helpful to those considering an offer of employment or in salary negotiations during a performance review.

Readers with a particular occupation in mind will likely want to compare earnings of that occupation by industry. By noting the OES occupational code from the front of the book and following that code through the various industries, you will quickly discover that earnings do vary by industry, sometimes by a substantial margin. In addition to mean (average) earnings, these tables also list the median (mid-point) and mid-range of the occupation calculated at the industry level.

Explanation of the Numbers

The alphabetical, OES code, and industry tables list mean, median, and mid-range values. The following describes some of the terms in the tables:

- **OES Code:** identifies each occupation
- **SIC Code:** identifies each industry
- **Mean (Average):** The mathematical weighted average of earnings of all employees reported in a particular occupation
- **Median (Mid-point):** The 50th percentile; in a particular occupation, one half of all employees earn less and one half earn more than this amount
- **Mid-range (Lower):** The 25th percentile; one quarter of all employees earn less and three quarters earn more than this amount
- **Mid-range (Upper):** The 75th percentile; three quarters of all employees earn less and one quarter earn more than this amount

The Mid-range represents the range of wages earned by the middle half of the workers in that occupation. In other words, one quarter of the workers make equal to or less than the lower wage listed, while one quarter make equal to or more than the higher wage listed, leaving one half of the workers earning between the two wages listed.

Entry Level Wages

The OES program does not survey entry level rates specifically, making it impossible to derive a true entry level rate from data in this publication. Readers attempting to estimate entry level earnings for a particular occupation could focus on the lower bound of the mid-range (the 25th percentile). It is fairly reasonable to believe that entry level earnings for a particular occupation would be near or slightly below the 25th percentile.

Estimated Employment

The Estimated Employment column in the tables represents estimated employment in a particular occupation for the fourth quarter of 1998.

Methodology

Sample

The sampling frame for the 1996, 1997, and 1998 OES surveys was the previous year's 2nd Quarter Employment, Wages, and Contributions (ES-202) report covered by the Maine Employment Security Law. Firms with less than five employees were excluded from the data for 1996 and 1997 but included in the data for 1998. Owners of unincorporated firms (sole proprietorships and partnerships) and those who are self-employed were excluded. Firm size classifications are as follows:

Size class	Number of employees
1	1 – 4
2	5 – 9
3	10 – 19
4	20 – 49
5	50 – 99
6	100 – 249
7	250 – 499
8	500 – 999
9	1,000 or more

The following table lists sample sizes and response rates after adjusting for units which were determined to be 'out of business' or 'out of scope' during the course of the surveys.

Year	Sample		Responses		Response Rate (%)	
	Units	Employment	Units	Employment	Units	Employment
1996	3,003	137,628	2,272	110,627	75.66	80.38
1997	2,935	129,333	2,374	103,418	80.89	79.96
1998	2,726	140,741	2,082	103,531	76.38	73.56

Wage Collection

The following table lists the 11 wage ranges in the OES program. The table assumes a 40-hour week and a 52-week year, or 2,080 hours per year.

Range	Hourly Rate	Weekly Rate	Annual Rate
A	Under \$6.75	Under \$270	Under \$14,040
B	\$6.75 – 8.49	\$270 – 339	\$14,040 – 17,659
C	\$8.50 – 9.99	\$340 – 399	\$17,660 – 20,779
D	\$10.00 – 11.24	\$400 – 449	\$20,780 – 23,399
E	\$11.25 – 13.24	\$450 – 529	\$23,400 – 27,559
F	\$13.25 – 15.74	\$530 – 629	\$27,560 – 32,759
G	\$15.75 – 19.24	\$630 – 769	\$32,760 – 40,039
H	\$19.25 – 24.24	\$770 – 969	\$40,040 – 50,439
I	\$24.25 – 43.24	\$970 – 1729	\$50,440 – 89,959
J	\$43.25 – 60.00	\$1730 - 2400	\$89,960 – 124,820
K	Over \$60.00	Over \$2400	Over \$124,820

Note: Conversion to annual rates may differ due to rounding.

The OES data represents straight time wage rates, which are total earnings prior to payroll deductions.

Included in the data are:

- Base rate
- Cost-of-living allowances
- Guaranteed pay
- Hazardous-duty pay
- Incentive pay including commissions, piecework, and production bonuses
- On-call pay
- Longevity pay

Excluded from the data are:

- Back pay
- Performance bonuses
- Jury duty pay
- Overtime pay
- Severance pay
- Shift differentials
- Non-production bonuses
- Tuition reimbursements
- Premium pay for overtime/working on weekends, holidays, and late shifts
- Profit sharing
- Attendance bonuses
- Holiday/year-end bonuses

Nineteen ninety-eight was the reference year for the 1996-1998 data. Data for 1996 and 1997 were updated to 1998 figures using the Employment Cost Index (ECI). Although the data was collected in the form of ranges rather than actual rates, the U.S. Bureau of Labor Statistics has determined that the mean, median, 25th percentile, and 75th percentile can be calculated accurately in most circumstances. These figures have been included in the tables.

Data Limitations

As with any statistical data, there are some limitations. Although hourly rates have been provided for each occupation other than teachers, producers and actors, athletes, and pilots, it should be noted that in many cases compensation is not based on an hourly rate. Compensation is often based on salary, commissions, tips, piece-rate, mileage, or a combination of these.¹ The weekly wage is based on an assumption of a 40-hour week and the annual wage is based on an assumption of a 40-hour week and a 52-week year. These assumptions may not be appropriate for waitstaff, sales occupations specializing in outside sales or real estate, truck drivers, airplane pilots and flight engineers, teachers, or many salaried workers in upper management.

¹ See above.

Another limitation is in the mid-range values. The wage ranges used in the OES program are open-ended at both the lower and upper spectrum, the lower wage being \$6.75 per hour and the upper range over \$60.00 per hour. Because the upper range is open-ended, the OES program cannot calculate any rate above \$60.00 per hour. Therefore, any occurrence of a \$60.00 value should be interpreted as being equal to or greater than \$60.00 per hour. In this case, the mid-range may not be strictly interpreted as the 25th and 75th percentiles.

A wide variance between the mean and the median may indicate that extreme high or low rates may have affected the mean. In such instances it may be advisable to use the median or the mid-range rather than the mean.

Two potential sources of bias in the OES data that are common to any statistical data are sampling and nonsampling errors. Sampling errors result from the differences that occur because a sample rather than the whole population was surveyed. Nonsampling errors result from numerous sources apart from the chance effects of using a sample. Some sources of nonsampling error include survey nonresponse, definitional problems, and processing errors. Quality control measures, such as follow up surveys of nonrespondents, are able to reduce nonsampling error. Effort is made to keep these errors to a minimum.

Notes

There are several possible reasons why data are missing in the tables.

Data for values over \$60/hour or \$124,820/year are not included.

Some employment estimates have relative errors greater than 50%. The relative error of an estimate is the square root of its variance divided by the estimate itself. A relative error greater than 50% suggests that the estimate is not reliable. Such data are not included in the tables.

Data that do not meet confidentiality requirements are not included in the tables. The U.S. Bureau of Labor Statistics has a strict confidentiality policy that assures that published figures will not reveal the identity of any specific respondent and will not allow the data of any specific respondent to be imputed from the published figures. The published figures are screened to ensure that they meet these confidentiality requirements.

Data for occupations not included for reasons of a high relative error or confidentiality have been included in the appropriate 'all other' categories in the industry tables and for the two balance of state areas in the area tables. However, occupations with unpublishable data have been excluded from statewide data and data for the four MSA areas. Therefore, the occupational employment estimates for the areas will not always add to the statewide totals, and employment for individual occupations listed in the statewide table and in the MSA tables may not add to the summary level tables.

The data for the Northeast Balance of State (BOS) area and the Southeast Balance of State (BOS) area have been provided as an extension to the official Occupational Employment Statistics (OES) data series. These additional areas have not been validated by U.S. Bureau of Labor Statistics (BLS) and are not, therefore, official BLS data series. The Maine Department of Labor feels, however, that these additional areas provide information that is useful to the users of the data.
