## Preface

The Labor Market Information Services staff wish to express our sincere appreciation to all who contributed to this publication. We thank in particular the employers of Maine who participated in the Occupational Employment Statistics (OES) survey by giving their time to provide employment and wage data. This information, aggregated by occupation, area, and industry, will be a valuable resource for businesses, job seekers, students, government, and economic developers.

The Occupational Employment Statistics survey is a federal-state cooperative program funded by the U.S. Bureau of Labor Statistics (BLS). All 50 states, the District of Columbia, Guam, Puerto Rico, and the U.S. Virgin Islands participate in the program. Wage estimates for all these states, and for most Metropolitan Statistical Areas (MSAs) can be found on the U.S. Bureau of Labor Statistics OES Internet site at [www.bls.gov/oes/](http://www.bls.gov/oes/). This site allows comparison of occupational wage rates from state to state and from area to area using a standardized methodology. Also available at the BLS Internet site are occupational definitions and technical notes about the OES survey.

The data presented in this publication is the third-year release of employment and wage estimates from the OES survey using the Office of Management and Budget's **Standard Occupational Classification (SOC)** system. The information in **Maine Occupational Wages** is based on data collected through the OES program by Wendy Nelson - OES Manager, John Roberts - Economic Research Analyst, and Betty Meader - Planning & Research Assistant. This publication was developed and prepared by Suzanne Thivierge - Occupational Wage Studies Program Manager, and David Welch - Economic Research Analyst.

This report provides occupational wage information to a broad spectrum of users in an easy-to-understand format. To accomplish this, the Labor Market Information Advisory Workgroup reviewed this publication. Members of the workgroup are from the Bureau of Employment Services, the Bureau of Rehabilitation Services, the Training and Development Corporation, the CareerCenters, and Labor Market Information Services. Their suggestions have been used to create a comprehensive report we hope our customers will find useful and easy to use.

If you have questions regarding Maine labor market information or products available through our office, please call (207) 287-2271, e-mail [lmis.me@Maine.gov](mailto:lmis.me@Maine.gov), or visit our web site at [www.Maine.gov/labor/lmis/](http://www.Maine.gov/labor/lmis/). ## How To Use This Publication

This section contains a brief description of the tables that follow along with some helpful hints on using them efficiently.

### Alphabetical Table

Readers who are looking for information on a specific occupation should start with the alphabetical table. The alphabetical table includes data for all industries and areas combined, a good starting point in wage analysis. The Standard Occupational Classification (SOC) code listed with each entry may serve as a reference when reviewing the other tables.

### SOC Code Table

Aside from the alphabetical table, all remaining tables are published in SOC code order. Viewing the tables in this way allows easy comparisons of earnings in related occupations. More information about SOC code titles and definitions may be found at [www.bls.gov/soc/](http://www.bls.gov/soc/).

<b>11-0000</b>	Management Occupations
<b>13-0000</b>	Business and Financial Operations Occupations

<b>25-0000</b>	Education, Training, and Library Occupations
<b>27-0000</b>	Arts, Design, Entertainment, Sports, and Media Occupations
<b>29-0000</b>	Healthcare Practitioners and Technical Occupations

<b>51-0000</b>	Production Occupations
<b>53-0000</b>	Transportation and Material Moving Occupations
<b>55-0000</b>	Military Specific Occupations (not surveyed in OES program)

Whenever one of these occupational groups appears in a table, the line is **boldfaced**, as data appearing after these summary level codes represent average earnings for all occupations in that group. For example, the 2001 mean (average) following SOC code 11-0000 states the hourly average of all managerial workers.

Readers who are not able to find a specific occupation may refer to the **Glossary – Definitions of Occupations** at the back of this publication that lists and defines every occupation found in this publication.

### **Area Table**

The area table includes six areas as well as statewide data arranged in order of SOC code. Each of the six areas and their geographic extent are shown in the **Methodology** section. The Balance of State (BoS) designations refer to locales not belonging to a specific Metropolitan Statistical Area (MSA) or Primary Metropolitan Statistical Area (PMSA).

### **Industry Table**

Many readers will be primarily interested in the industry wage tables published in SIC (Standard Industrial Classification) code order. For instance, business or department managers may wish to compare their company's wage scales with those reported for their industry. This is a good starting point for a comparison study or review. Information provided by these tables can be helpful to those considering an offer of employment or in salary negotiations during a performance review.

Readers with a particular occupation in mind will likely want to compare earnings of that occupation by industry. By noting the SOC code from the **Alphabetical** section and following that code through the various industries, the reader may discover that earnings do vary by industry, sometimes by a substantial margin. In addition to mean (average) earnings, the tables in this publication also list the median (mid-point) as well as the lower and upper ends of the mid-range of the occupation within that industry.

After the **Methodology** section, you will find the **Wage Conversion Chart**. This tool can be used to convert the hourly wage rates found in these tables into weekly and yearly figures, based on a 40-hour week or a 2,080-hour year.

## Methodology

The following describes some of the terms in the tables:

- **SOC Code:** the Standard Occupational Classification code that identifies each occupation.
- **Mean (Average):** the mathematical weighted average of earnings of all employees.
- **Median (Mid-point):** the 50<sup>th</sup> percentile; one half of all employees earn less and one half earn more than this amount.
- **Mid-range (Lower):** the 25<sup>th</sup> percentile; one quarter of all employees earn less and three quarters earn more than this amount.
- **Mid-range (Upper):** the 75<sup>th</sup> percentile; three quarters of all employees earn less and one quarter earn more than this amount.
- **SIC Code:** the Standard Industrial Classification code that identifies each industry.
- **Estimated Employment:** the estimated employment in the occupation for the fourth quarter (October-December) 2001.
- **# Firms Reporting:** the number of employers who reported the occupation.

The mid-range represents the range of wages earned by the middle half of the workers in that occupation. In other words, one quarter of the workers make equal to or less than the lower wage listed, while one quarter make equal to or more than the higher wage listed, leaving one half of the workers earning between the two wages listed.

### Entry-Level Wages

The OES program does not survey entry-level rates specifically, making it impossible to derive a true entry-level rate from data in this publication. Readers attempting to estimate entry-level earnings for a particular occupation could focus on the lower bound of the mid-range (the 25<sup>th</sup> percentile). It is fairly reasonable to believe that entry-level earnings for a particular occupation would be near or slightly below the 25<sup>th</sup> percentile.

### Sample

The sampling frame for the 1999, 2000, and 2001 OES surveys was the previous year's 2<sup>nd</sup> Quarter Employment, Wages, and Contributions (ES-202) report covered by the Maine Employment Security Law. Owners of unincorporated firms (sole proprietorships and partnerships) and those who are self-employed were excluded.

The following table lists sample sizes and response rates after adjusting for units which were determined to be 'out of business' or 'out of scope' during the course of the surveys.

Year	Sample		Responses		Response Rate (%)	
	Units	Employment	Units	Employment	Units	Employment
1999	2,904	148,386	2,198	115,044	75.7	77.5
2000	2,839	134,442	2,172	100,689	76.5	74.9
2001	2,841	132,865	2,195	105,646	77.3	79.5

### Wage Collection

Wages for the OES survey are straight-time, gross pay, exclusive of premium pay. Included are base rate, cost-of-living allowances, longevity pay, guaranteed pay, hazardous-duty pay, incentive pay including commissions and production bonuses, tips, and on-call pay. Excluded are back pay, jury duty pay, overtime pay, severance pay, shift differentials, nonproduction bonuses, profit sharing, attendance, holiday and year-end bonuses, and tuition reimbursements.

The OES survey collects wage data in 12 intervals. Employers report the number of employees in an occupation per each wage range. The wage intervals are as follows:

Interval	Hourly Wages	Annual Wages
Range A	Under \$6.75	Under \$14,040
Range B	\$6.75 – 8.49	\$14,040 – 17,679
Range C	\$8.50 – 10.74	\$17,680 – 22,359
Range D	\$10.75 – 13.49	\$22,360 – 28,079
Range E	\$13.50 – 16.99	\$28,080 – 35,359
Range F	\$17.00 – 21.49	\$35,360 – 44,719
Range G	\$21.50 – 27.24	\$44,720 – 56,679
Range H	\$27.25 – 34.49	\$56,680 – 71,759
Range I	\$34.50 – 43.74	\$71,760 – 90,999
Range J	\$43.75 – 55.49	\$91,000 – 115,439
Range K	\$55.50 – 69.99	\$115,440 – 145,599
Range L	\$70.00 and over	\$145,600 and over

Note: Conversion to annual rates may differ due to rounding.

The year 2001 was the reference year for the 1999-2001 data. Wage data from the 1999 and 2000 surveys were updated to 2001 estimates using the Employment Cost Index (ECI). Although the data was collected in the form of intervals rather than actual rates, the U.S. Bureau of Labor Statistics has determined that the mean, median, 25<sup>th</sup> percentile, and 75<sup>th</sup> percentile can be calculated accurately in most circumstances. These figures have been included in the tables.

## **Data Limitations**

As with any statistical data, there are some limitations. Hourly rates for occupations where workers typically work other than 2,080 hours per year - such as teachers, actors, producers and directors, coaches and scouts, athletes, and pilots - are not available. Instead, wages for these occupations are provided at the annual level.

The wage ranges used in the OES program are open-ended at both the lower and upper spectrum, the lowest range being less than \$6.75 per hour and the highest range being \$70.00 and over per hour. The lowest range has a low boundary equal to the minimum wage, which was \$5.15 per hour in Maine through December 31, 2001. Because the highest range is open-ended, the OES program cannot calculate any rate above \$70.00 per hour. Therefore, any occurrence of a \$70.00 value should be interpreted as being equal to or greater than \$70.00 per hour.

A wide variance between the mean and the median or a mean that is outside the mid-range may indicate that extremely high or low rates may have affected the mean. In such instances, it may be advisable to use the median or the mid-range rather than the mean.

Two potential sources of bias in the OES data that are common to any statistical data are sampling and nonsampling errors. Sampling errors result from the differences that occur because a sample rather than the whole population was surveyed. Nonsampling errors result from numerous sources apart from the chance effects of using a sample. Some sources of nonsampling error include survey nonresponse, definitional problems, and processing errors. Quality control measures, such as follow-up surveys of nonrespondents, are able to reduce nonsampling error. Effort is made to keep these errors to a minimum.

## **Notes**

There are several possible reasons why data are missing in the tables (n/a):

- Data for values over \$70.00 per hour or \$145,600 per year are not included.
- Some employment estimates have relative errors greater than 50%. The relative error of an estimate is the square root of its variance divided by the estimate itself. A relative error greater than 50% suggests that the estimate is not reliable. Such data are not included in the tables.
- Data that do not meet confidentiality requirements are not included in the tables. The U.S. Bureau of Labor Statistics has a strict confidentiality policy that assures that published figures will not reveal the identity of any specific respondent and will not allow the data of any specific respondent to be imputed from the published figures. The published figures are screened to ensure that they meet these confidentiality requirements.
- For any area or industry, no employment was reported for that occupation.

Also note that details may not add to totals due to rounding and due to the suppression of confidential data and data with high relative errors.
