#### INTRODUCTION

The Occupational Safety and Health (OSH) Act of 1970 created an extensive and detailed set of regulations that applied to most private employers in the United States who had not been covered by previous safety legislation. Under the OSH Act, employers are required to keep records of all work-related deaths, all occupational illnesses, and those work-related injuries which involve restriction of work or motion, loss of consciousness, temporary transfer to another job, or medical treatment beyond first aid (see Appendix C for the distinction between medical treatment and first aid). It is hoped that keeping these records will encourage both employers and workers to be more aware of maintaining safe and healthful working conditions.

The United States Department of Labor, Bureau of Labor Statistics, is the federal agency authorized under the Act to develop and maintain the annual occupational injury and illness survey program. BLS created a federal/state cooperative system to fulfill this function. The recordkeeping system is designed to assist the Occupational Safety and Health Administration in establishing standards and identifying hazardous industries. The survey is intended to provide the Bureau of Labor Statistics and cooperating state agencies with a statistical base. The Maine Department of Labor, Bureau of Labor Standards, Research and Statistics Division is the agency designated to collect, compile, and analyze the injury and illness data for the State of Maine. The results of this cooperative program are presented in this report.

Survey year 1989 represents the eighteenth full year of data collection for the OSH survey. This publication examines trends and patterns in the information collected over the past 12 years in an effort to better analyze and interpret this year's results.

The industry groupings are based on the Standard Industrial Classification Manual. In 1987, the manual was updated to reflect changes in the economy's industrial makeup. For calendar year 1988, two sets of estimates were run, one based upon the industry groupings in the older, 1972 manual and one based upon groupings in the 1987 manual. Unlike previous publications, the 1989 publication is based upon the industry groupings in the updated 1987 manual. Caution should be taken when comparing the 1988 rates in the 1989 publication with those in the 1988 publication, because they are slightly different due to the fact that some companies shifted into new groupings in the 1987 Standard Industrial Classification Manual. Additionally, any presentation of data involving more than two years (1988 and 1989) will include a comparison of different industry groupings.

#### I. 1989 SURVEY HIGHLIGHTS

- \* Recordable occupational injuries and illnesses occurred at an estimated rate of 14.5 cases for every 100 full-time workers in 1989. This statistic represents an increase of 1.4 percent over the 1988 total case incidence rate of 14.3 injuries and illnesses per 100 workers.
- \* In the private sector in Maine, an average of 1 in 8 workers suffered a recordable occupational injury or illness during 1989.
- \* There were approximately 53,060 OSHA recordable occupational injuries and illnesses during 1989, of which slightly more than half, about 27,300, involved one or more lost workdays (includes both days away from work and restricted workdays). This statistic represents an increase in total cases of about 890, or 1.7 percent, from 1988 to 1989.
- \* About 91 percent of all job-related injuries and illnesses in Maine during 1989 were injuries; only 9 percent were illnesses.
- \* There were approximately 48,140 recordable injuries in Maine in 1989, about 360 fewer cases than in 1988.
- \* The estimated number of lost workdays due to occupational injuries increased in 1989 by nearly 15,170 to 556,190 days lost. This figure was an increase of 2.8 percent over 1988 figures.
- \* The estimated number of occupational illnesses increased 34.1 percent to over 4,920 cases. The number of workdays lost due to illnesses increased by over 31 percent, to approximately 94,670 days in 1989. The number of illnesses associated with repeated trauma increased 50.8 percent. Three other illness categories increased in 1989, while three others decreased.
- \* In 1989 there were an estimated 650,860 lost workdays recorded. Of these, approximately 476,180 were days away from work and 174,680 were days of restricted work activity. These statistics mean that as a result of occupational injuries and illnesses in Maine in 1989, there was a loss to Maine's private sector economy of over 2,600 worker years of labor. This figure represents a substantial increase from 1988 when over 2,450 worker years were lost.
- \* On the average, each lost workday case in 1989 resulted in 24 workdays lost, up from last year's figure of 23 lost workdays per lost workday case. Each lost workday injury in 1989 involved an average of 22 lost workdays, while occupational illnesses accounted for 41 lost workdays per lost workday illness case.
- \* From 1988 to 1989, total case incidence rates increased for five industry divisions and decreased for three industry divisions. Agriculture (+19 percent) and Finance (+12 percent) increased the most, while Transportation (-26 percent) experienced the largest decrease in its total case rate.

#### II. WHAT IS AN INCIDENCE RATE?

In the annual Occupational Injuries & Illnesses Survey, data is collected from a selected sample of Maine's private sector employers regarding their safety and health experience during the previous year. By simply examining the number of injuries and illnesses for different industries, meaningful comparisons would be difficult because of the various size workforces and different patterns of working hours. More information is needed than just the number of cases.

Therefore, in addition to the number of injuries, illnesses, and associated lost workdays, the survey asks for the total number of hours actually worked by all of the company's employees during the survey year. This figure, known as the number of exposure hours, allows the computation of the number of cases or lost workdays for every 100 full-time equivalent workers (200,000 exposure hours). The result, known as an incidence rate, permits year-to-year and industry-to-industry comparisons. The formula by which incidence rates are computed is as follows (in all cases, the figure given as the incidence rate should be understood to represent the number of cases or lost workdays per 100 full-time workers):

#### INCIDENCE RATE (IR) = $(N \times 200,000)/EH$

N= NUMBER OF INCIDENTS EH= TOTAL HOURS WORKED BY EMPLOYEES IN ONE YEAR, EXCLUDING VACATION & SICK LEAVE

An example of the calculation of incidence rate follows:

#### FIRM X

Number of cases=5 Number of employees=15 Hours worked per week=30 Weeks worked per year=50

EH=15x30x50=22,500

IR=5x200,000/22,500=44.4

#### FIRM Y

Number of cases=15 Number of employees=50 Hours worked per week=40 Weeks worked per year=50

EH=50x40x50=100,000

IR=15x200,000/100,000=30.0

This example exhibits the usefulness of incidence rates. By just comparing the number of cases, it appears that Firm Y had a poorer safety record than Firm X. However, by comparing incidence rates, which compares both firms at a common base, Firm Y actually has a better safety record.

An incidence rate can be calculated for injuries, illnesses, or the sum of both. Within any of these categories, rates can be identified for total cases, lost workday cases, nonfatal cases without lost workdays, days away from work, days of restricted work activity, or total lost workdays. In bold print below, you will find a list of various incidence rates that you can compute. Use the numbers on your OSHA 200 log form for the columns specified and plug the figure into the formula in place of N.

- \*Total Case Incidence Rate = Columns 1+2+6+8+9+13
- \*Lost Workday Case Incidence Rate = Columns 2+9
- \*Incidence Rate for Nonfatal Cases without Lost Workdays = Columns 6+13
- \*Total Lost Workdays Incidence Rate = Columns 4+5+11+12
- \*Incidence Rate for Days Away from Work = Columns 4+11
- \*Incidence Rate for Restricted Workdays = Columns 5+12
- \*Total Case Incidence Rate for <u>Injuries</u> = Columns 1+2+6
- \*Lost Workday Case Incidence Rate for Injuries = Column 2
- \*Injury Incidence Rate for Nonfatal Cases without Lost Workdays = Column 6
- \*Total Lost Workdays Incidence Rate for <u>Injuries</u> = Columns 4+5
- \*Injury Incidence Rate for Days Away from Work = Column 4
- \*Injury Incidence Rate for Restricted Workdays = Column 5
- \*Total Case Incidence Rate for Illnesses = Columns 8+9+13
- \*Lost Workday Case Incidence Rate for Illnesses = Column 9
- \*<u>Illness</u> Incidence Rate for Nonfatal Cases without Lost Workdays = Column 13
- \*Total Lost Workdays Incidence Rate for Illnesses = Columns 11+12
- \*Illness Incidence Rate for Days Away from Work = Column 11
- \*Illness Incidence Rate for Restricted Workdays = Column 12

#### III. MAINE'S CONSULTATION AND TRAINING PROGRAMS

The Maine Department of Labor, Bureau of Labor Standards offers safety consultation and training programs to businesses in the state. These services are provided free of charge. Since Maine is a Federal OSHA state, the Bureau of Labor Standards operates in a non-enforcement manner in an attempt to foster safety awareness and voluntary compliance. Through these programs, the staff of the bureau:

- .....assist Maine employers in developing and maintaining healthful and safe workplaces.
- .....offer penalty-free and cost-free safety and health inspections.
- .....discuss the problems found during inspection and suggest ways to correct them.
- .....provide a written report covering the problems discovered during the inspection, including suggestions for correcting them.
- .....offer a pre-construction review of plans or specifications for potential safety and health problems.
- .....offer assistance in measuring potential safety and health problems.
- .....offer assistance in correcting violations uncovered during an OSHA inspection.
- .....offer training in many occupational safety and health topics.

If you would like more information about this program or would like to request a consultation, call the Bureau of Labor Standards' Safety Division at 289-6460, or write to State House Station #82, Augusta, Maine 04333.

#### MAINE'S LOW INTEREST LOAN PROGRAM

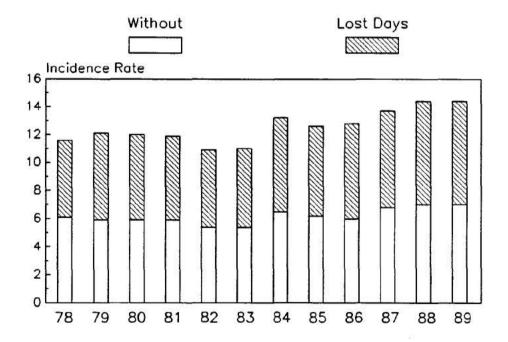

The State of Maine has a low interest loan program for Maine employers who wish to purchase equipment which will improve the healthfulness and safety of their workplaces. Loans of up to \$50,000 are provided at 3 percent interest for a maximum repayment period of 10 years. For further information about this program call the Bureau of Labor Standards at 289-6460 or call the Finance Authority of Maine at 289-FAME.

#### IV. OCCUPATIONAL INJURY AND ILLNESS INCIDENCE RATES

Recordable occupational injuries and illnesses occurred at a rate of 14.5 cases for every 100 full-time workers in Maine in 1989. This all-industry total case incidence rate represents the experience of approximately 440,000 workers in Maine's private sector. Lost workday cases (those involving days away from work or days of restricted work activity or both) occurred at the rate of 7.4 cases per 100 workers. The incidence rate for injuries and illnesses without lost workdays was 7.0.

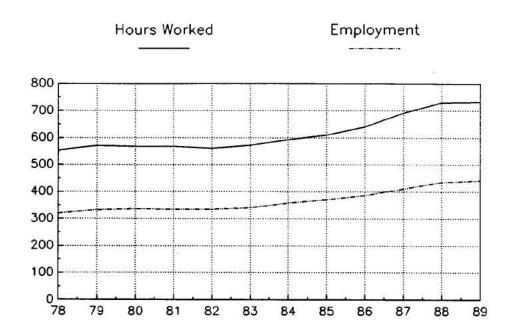

In 1989 the total case incidence rate and the lost workday case rate each increased 1.4 percent over 1988. Both of these rates represent the highest ever recorded in those categories. The incidence rate for cases without lost workdays remained unchanged from the 1988 rate of 7.0.

Figure 1. Total Case Incidence Rates by Case Type Maine 1978–1989

As illustrated in Figure 2, the total hours worked and the annual average employment have increased each year since 1982. From 1988 to 1989, increases slowed to about 0.4 percent in hours worked and about 1.2 percent in employment in the private sector.

Figure 2. Total Hours Worked and Annual Average Employment Maine 1978–1989

#### V. LOST WORKDAYS AND LOST WORKDAY INCIDENCE RATES

Lost workdays include days that an employee is totally absent from work, as well as days that an employee's work activity is restricted. Restrictions occur when an employee is transferred to another job temporarily, the employee is only able to work part time on his/her normal job because of the injury or illness, or the employee works full time on his/her regular job but can't do all activities normally associated with the job (e.g., a lifting restriction of 30 pounds). The day an injury occurs or the day an illness is recognized are not counted. The incidence rate for total lost workdays in 1989 was 177.6 days for every 100 workers. This figure can be broken down as follows: 129.9 days away from work and 47.7 days of restricted work activity.

The lost workday incidence rate nearly doubled between 1972 and 1980. The average yearly change was about 9 percent. After rising to an all-time high in 1984 (139.4), the lost workday incidence rate declined in 1985 and 1986. Since 1986, the rate has increased each year. The 1989 rate is over 27 percent higher than the 1984 rate.

Days away from work made up 73 percent of all lost workdays in 1989. In 1989, the incidence rate for days of restricted work activity rose by 8.7 percent over the 1988 rate. This rate has increased for ten of the last twelve years.

Figure 3. Lost Workday Incidence Rates by Category Maine 1978–1989

#### VI. OCCUPATIONAL ILLNESSES

An occupational illness is an abnormal condition or disorder, other than one resulting from an occupational injury (an instantaneous or one-time event), caused by exposure to environmental factors at work. Illnesses include anything developed over time, such as tendonitis or carpal tunnel syndrome. In 1989, Maine's private sector recorded 1.3 occupational illnesses per 100 full-time workers. This figure represents an increase of 30.0 percent over 1988. The incidence rate of illnesses with lost workdays increased to 0.6 cases per 100 full-time workers. The lost workday rate due to illnesses increased from 19.8 days per 100 full-time workers in 1988 to 25.8 days in 1989, an increase of 30 percent. In 1989, 9.0 percent of all recordable cases were classified as illnesses.

Text Table A: Illness Incidence Rates by Type and Incidence Rates of Lost Workdays due to Illness, Maine, 1978–1989

		Incidence Rates		Percent of
Survey Year	Total Illnesses	Lost Workday Illnesses	Lost Workdays due to Illness	All Cases That were Illnesses
1978	0.4	0.2	2.8	2.8
1979	0.4	0.2	<b>3.0</b>	3.1
1980	0.4	0.2	4.8	3.6
1981	0.5	0.3	5.9	4.1
1982	0.6	0.4	11.9	5.4
1983	0.6	0.3	11.2	5.1
1984	0.6	0.3	10.4	4.9
1985	0.5	0.3	9.2	4.2
1986	0.6	0.3	9.8	5.0
1987	0.9	0.5	17.7	6.9
1988	1.0	0.5	19.8	7.0
1989	1.3	0.6	25.8	9.0

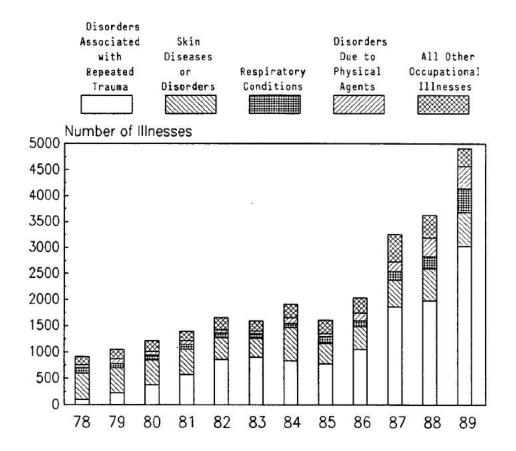

As shown in Text Table B, the estimated number of occupational illnesses increased by 34.2 percent from 1988 to 1989. Of the seven illness categories (see Appendix F for descriptions of the types of illnesses in each category), four reported increases: disorders associated with repeated trauma, including tendonitis and carpal tunnel syndrome, increased by nearly 51 percent and accounted for approximately 62 percent of all occupational illnesses in 1989; respiratory diseases and disorders increased by about 99 percent; disorders due to physical agents rose by over 17 percent; and occupational skin diseases and disorders increased by over 6 percent. Those categories with a lower number of reported case were: dust diseases of the lung (-51 percent); poisoning (-44 percent); and the "all other" occupational illnesses category (-12 percent).

Text Table B: Number of Occupational Illnesses by Category, Maine, 1988-1989

	Number of Illnesses			
Category of Illness	1988	1989	- %Chg	
Total all Categories	3670	4925	34.2	
Disorders associated with repeated trauma Occupational skin diseases and disorders Respiratory diseases due to toxic agents Disorders due to physical agents	2012 615 231 363	3035 651 459 424	50.8 5.9 98.7 16.8	
Poisoning (systemic effects of toxic material) Dust diseases of the lung All other occupational illnesses	75 51 320	42 25 280	-44.0 -51.0 -12.5	

Figure 4 illustrates the number of occupational illnesses for each of the past 12 years. Each design represents a specific category of illnesses. The designs are stacked to illustrate the portion of that illness to the total illnesses during a particular year.

Figure 4. Number of Occupational Illnesses by Type Maine 1978–1989

#### VII. INDUSTRY DIVISION ANALYSIS

Industry divisions are defined using the Standard Industrial Classification (SIC) system (see Appendix F). Data are provided for eight industry divisions: Agriculture, Construction, Manufacturing, Transportation, Wholesale Trade, Retail Trade, Finance, and Services.

From 1988 to 1989, total case incidence rates increased in five industry divisions and decreased in three divisions. Increases for both total case incidence rates and for lost workday case incidence rates occurred in Agriculture (01-09), Manufacturing (20-39), Wholesale (50-51) and in Finance (60-67).

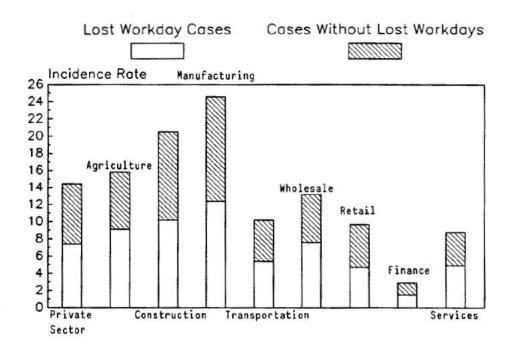

Text Table C: Total Case Incidence Rates by Case Type, by Industry Division, Maine, 1988-1989

				Incide	ence Rate	es			
	т	otal Cas	es	Los	st Workd Cases	ay		tal Case st Work	•
Industry (SIC)	1988	1989	%Chg	1988	1989	%Chg	1988	1989	%Chg
PRIVATE SECTOR	14.3	14.5	1.4	7.3	7.4	1.4	7.0	7.0	0.0
Agriculture (01–09)	13.3	15.8	18.8	7.2	9.1	26.4	6.1	6.7	9.8
Construction (15–17)	20.2	20.6	2.0	10.4	10.2	-2.0	9.8	10.3	5.1
Manufacturing (20–39)	23.3	24.6	5.6	12.1	12.4	2.5	11.1	12.2	9.9
Transportation (40–49)	12.8	10.2	-20.3	7.4	5.4	-27.0	5.4	4.8	-11.1
Wholesale Trade (50–51)	12.8	13.2	3.1	6.9	7.6	$10.1 \\ 2.2$	5.9	5.6	-5.1
Retail Trade (52–59)	9.9	9.7	-2.0	4.6	4.7		5.4	5.0	-7.4
Finance (60–67)	2.6	2.9	11.5	$\frac{1.2}{4.6}$	1.5	25.0	1.4	1.4	0.0
Services (70–89)	9.0	8.8	-2.2		4.9	6.5	<b>4.</b> 5	3.9	-13.3

Six of the eight industry divisions recorded increases in their lost workday case incidence rates, with the largest increases occurring in Finance (25.0 percent) and Agriculture (26.4 percent).

The all-industry incidence rate for cases without lost workdays remained the same as in 1988, due to decreases in this rate in four industry divisions.

Figure 5. Total Case Incidence Rates by Case Type by Division Maine 1989

The total lost workday incidence rate increased 5.8 percent from 1988 to 1989. This was due to an increase of about 9 percent in the incidence rate for days of restricted activity combined with an increase of nearly 5 percent in the rate of days away from work. The largest increases in total lost workday rates were in Construction (35 percent), Retail (26 percent), and Agriculture (23 percent). Five divisions had increases in incidence rates for both days of restricted activity and days away from work.

Source of Employment Data: Maine Department of Labor, Bureau of Employment Security, Division of Economic Analysis and Research.

The Manufacturing industry decreased in percentage of employment but increased in percentage of total cases. The industry accounted for nearly 24 percent of the private sector employment while recording over 47 percent of all cases and over three-quarters of all illnesses. The Retail Trade and Services industries together accounted for over 51 percent of the total employment, yet together they accounted for only 28 percent of the total cases and 17 percent of the illnesses.

Source of Employment Data: Maine Department of Labor, Bureau of Employment Security, Division of Economic Analysis and Research.

Figure 6 illustrates the percentage of the private sector employment, total cases, and injuries in specific Major Industry Groupings during 1989. Manufacturing and Construction, two inherently hazardous industries, have higher percentages of total cases and injuries than they do employment.

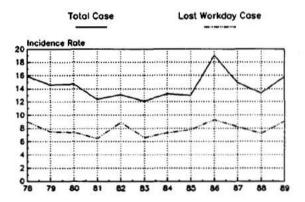

Figure 6. Percent Distribution by Division of Employment, Total Cases, and Injuries Maine 1989

#### Agriculture, Forestry, and Fishing

The occupational injury and illness rate for the Agriculture, Forestry, and Fishing industry increased 18.8 percent, from 13.3 in 1988 to 15.8 in 1989. The industry experienced a lost workday case rate of 9.1 (an increase of 26.4 percent over 1988), and a rate of 6.7 for cases without lost workdays (also higher than the 1988 rate of 6.1). The lost workday rate increased 22.6 percent to 218.9, a twelve year high. Because the survey does not include agricultural units with less than eleven employees, the statistics may not reflect the experience of the entire agricultural industry.

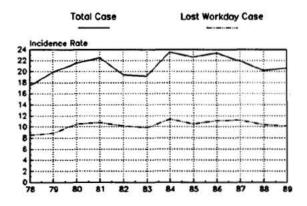

Figure 7. Twelve-year History of the Agriculture,
Forestry, and Fishing Industry
Maine 1978-1989

#### Construction

The Construction industry had the second highest total case incidence rate of the major industry divisions, behind manufacturing, 20.6 per 100 full-time workers. The 1989 rate was 2.0 percent higher than the 1988 rate of 20.2. This industry, however, had over 11 percent of the total cases and just 7.5 percent of the employment, a reflection of the hazardous nature of the work. The lost workday incidence rate increased by over 34 percent from 193.9 in 1988 to 261.2 in 1989, a twelve year high.

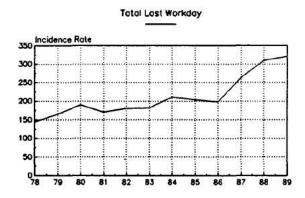

Figure 8. Twelve-year History of the Construction Industry
Maine 1978-1989

#### Manufacturing

Maine's Manufacturing industry's total case incidence rate increased to its highest level for the third straight year, 24.6 per 100 full-time workers. This increase was 5.6 percent above the 1988 rate of 23.3. This industry accounted for 47 percent of the total cases in the survey but only 24 percent of the employment. The lost workday incidence rate rose 3.8, percent from 309.3 lost workdays per 100 full-time workers in 1988 to 320.9 in 1989, the highest ever recorded. This was also the third straight year the lost workday rate reached its highest total. Of the publishable private sector industries, five experienced total lost workday incidence rates higher than the manufacturing rate: Rubber & Plastic Products, 334.2; Special Trade Contractors, 323.8; Lumber & Wood Products, 317.4; Paper & Allied Products, 314.7; and Leather & Leather Products, 309.5.

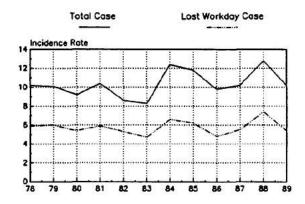

Figure 9. Twelve-year History of the Manufacturing Industry
Maine 1978-1989

#### Transportation & Public Utilities

The Transportation and Public Utilities industry, after reaching its highest rates in 1988, experienced decreases in its total case incidence rate, its lost workday case incidence rate, and its lost workday rate in 1989. The lost workday rate, 124.0 per 100 full-time workers, was its lowest in six years. The Trucking & Warehousing industry had the highest total case incidence rate in this division, 15.0 per 100 full-time workers.

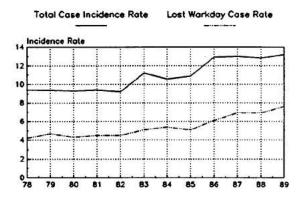

Figure 10. Twelve-Year History of the Transportation & Public Utilities Industry Maine 1978-1989

#### Wholesale Trade

The Wholesale Trade industry's total case incidence rate and lost workday case incidence rate each reached their highest levels in 1989. The lost workday rate, however, decreased 9.5 percent from 1988 to 1989, its first drop since 1985.

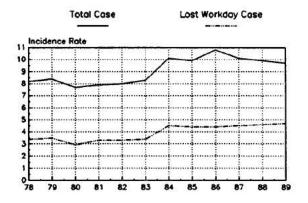

Figure 11. Twelve-year History of the Wholesale Industry
Maine 1978-1989

#### Retail Trade

Although the total case incidence rate for the Retail Trade industry dropped for the third straight year to 9.7, the lost workday case rate increased for the third straight year. The lost workday rate increased 25.6 percent, from 80.4 lost workdays per 100 full-time workers in 1988 to 101.0 lost workdays per 100 full-time workers in 1989. Restaurants and Food Stores are the two industries with the greatest employment in the retail division. Food Stores had the highest total case incidence rate in this division, with 13.1 injuries and illnesses per 100 full-time workers.

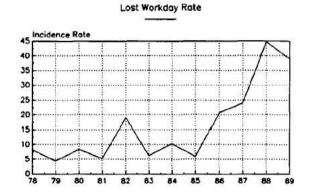

Figure 12. Twelve-year History of the Retail Industry Maine 1978-1989

#### Finance. Insurance & Real Estate

This industry has the lowest incidence rates in the survey. This can be attributed to relatively fewer hazards being present in these industries than in others. The 1989 total case incidence rate, however, increased from 2.6 in 1988 to 2.9 in 1989. The rate for lost workday cases also increased. The lost workday rate decreased for the first time since 1985 to 39.0 per 100 full-time workers.

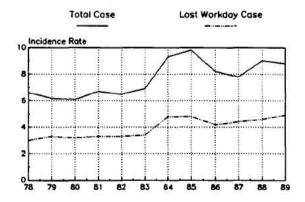

Figure 13. Twelve-year History of the Finance, Insurance & Real Estate Industry Maine 1978-1989

#### Services

The total case incidence rate for the Services industry dropped from 9.0 in 1988 to 8.8 in 1989. Conversely, the lost workday case rate and the lost workday rate each increased for the third straight year. The lost workday rate of 102.0 was the highest since the all-time high of 110.1 in 1985. The groups with the highest rates in the Service Industries are Hotels, Rooming Houses, Camps, and Other Lodging Places and Health Services (including Hospitals and Nursing Homes).

Figure 14. Twelve-year History of the Services Industry
Maine 1978–1989

#### VIII. ANALYSIS OF MAJOR INDUSTRY GROUPS

In 1989, there were 41 Major Industry Groups (identified by two-digit SIC codes; see Glossary) for which incidence rates were publishable. Of these, 21 groups recorded higher total case incidence rates in 1989 than in 1988, while 18 groups experienced declining rates. There were two groups in which incidence rates were not publishable in 1988.

Of these 41 publishable industry groups, Stone, Clay, Glass & Concrete Products (SIC 32) experienced the private sector's greatest total case incidence rate, 27.1 injuries and illnesses per 100 workers, or about one case for every 3-4 workers. The lowest total case rate was for Insurance Agents & Brokers (SIC 64), with 0.9 cases per 100 workers, or less than one case per 100 workers. Expressed differently, the total case incidence rate of the most hazardous industry group was about 30 times greater than that of the least hazardous group. Clearly, a difference exists in the safety experience among various groups, a difference often affected by the hazards encountered in different industries.

In 1989, there were 18 publishable industry groups which had total case incidence rates greater than the all-industry average (in 1988 there were 16 above average groups out of the 44 publishable groups). The Stone, Clay, Glass & Concrete Products industry (SIC 32) moved up from the eighth highest total case incidence rate of the publishable two-digit industries in 1988 to the highest of the publishable two-digit industries in 1989. The Textile Mill Products industry (SIC 22) moved up from fifteenth to seventh. Conversely, the ranking for the Paper & Allied Products industry (SIC 26) dropped from fourth in 1988 to thirteenth in 1989.

The 18 groups with above average total case rates include some from every division except Mining, Retail, and Finance, Insurance & Real Estate. Together, these 18 groups accounted for nearly 34 percent of 1989's total private sector employment, but they experienced about 47 percent of all recordable cases.

Note: \*\* represents Industry Groups whose rates were not publishable in 1988.

Text Table H displays the rankings of the 17 above average industry groups in terms of lost workday incidence rates. Four industry groups had Lost Workday Rates that were at least 75 percent higher than the all-industry lost workday rate: Rubber & Plastic Products, Special Trade Contractors, Lumber & Wood Products, and Paper & Allied Products. The rate for Rubber & Plastic Products jumped from ninth in 1988 to first in 1989 due to a 60 percent increase in the lost workday rate. The Special Trade Contractors jumped from tenth to second due to a 59 percent increase in its lost workday rate.

Text Table H: Lost Workday Incidence Rates for Industry Groups that Exceed the All-Industry Rate, Maine, 1989

Industry (SIC)	SIC	Total Lost Workdays
PRIVATE SECTOR, ALL INDUSTRIES	01-89	177.6

If injuries alone were considered, there were 18 groups whose 1989 total case rates exceeded the private sector rate. Of these, three groups, Stone, Clay, Glass, & Concrete Products; Heavy Construction Contractors; and Rubber & Plastic Products had rates that were at least 75 percent higher than the all-industry Injury Incidence Rate. All three construction groups and ten of the manufacturing groups are included in the list.

Apparel & Other Finished Products	23	13.2

As shown in Text Table J, ten groups recorded total case incidence rates for occupational illnesses that exceeded the all-industry rate. The most hazardous group in terms of illnesses is the manufacture of Leather and Leather Products, with a rate more than five times higher than the private sector rate. Diseases due to repeated trauma (e.g., tendonitis, carpal tunnel syndrome) account for 75.8 percent of the illnesses in this industry.

#### IX. INCIDENCE RATES BY COMPANY SIZE

The incidence rates for different size firms vary. Generally, small firms with one to 10 employees have a low total case incidence rate, while firms with 50 or more employees have higher incidence rates. In 1989, companies with 1000 or more employees had the highest total case incidence rate of the size class groupings, 27.0. The incidence rate for Maine's smallest employers rose by over 200 percent from 1988 to 1989. Incidence rates fell for employers with between 4 and 50 employers.

Text Table K: Total Case Incidence Rate by Size Class, Maine, 1988-1989

#### X. MAINE COMPARED TO OTHER STATES AND TO THE UNITED STATES

In 1989, the total case incidence rate in Maine was over 68 percent higher than in the United States as a whole (14.5 versus 8.6). Similarly, the lost workday case rate was higher by about 85 percent, and the incidence rate for lost workdays was higher by over 125 percent. In every year since the survey began, Maine's rates have exceeded the comparable national rates.

Why are Maine's incidence rates so much higher? One possible reason that can be quantitatively examined is the industry mix (the distribution of total employment in various industries). Obviously, if Maine's private sector has a higher proportion of employment in more hazardous industries than the nation as a whole, the all-industry incidence rate for Maine would be correspondingly greater. One can investigate this possibility by using the Standard Industry Mix (SIM) which permits comparisons between states or between a state and the nation. Briefly, the SIM bases the injury and illness experience of one area (Maine, in this case) on the industry mix of the area to which it is being compared (the United States). A more complete explanation can be found in Appendix A.

The disparity between Maine's rates and national rates exists at the industry division level. In 1989, all of the industry divisions except Transportation & Public Utilities experienced higher adjusted incidence rates in Maine than in the nation as a whole. The discrepancy was highest in Manufacturing and in Wholesale Trade where Maine's adjusted total case rates exceeded the national rates by about 77 percent and 66 percent respectively.

Adjustment for Standard Industry Mix has the effect of reducing Maine's total case rate by about 10 percent. The rate for lost workday cases decreases by about 8 percent and the rate for lost workdays by about 6 percent. Though adjusting Maine's division level rates acts to bring them closer to the national rates, the adjusted rates still exceed the equivalent national rates.

## FOOTNOTES FOR TABLES 1-6:

- 1. Industry Division and group totals include data for industries not shown separately.
- 2. Standard Industrial Classification Manual, 1987 Edition.
- 3. The incidence rates represent the number of illnesses or lost workdays per 100 full-time employees and were calculated using the following formula:

Rate = 
$$(N \times 200,000) / EH$$

Where N = number of injuries, illnesses, total cases, or lost workdays. 200,000 = base for 100 full-time equivalent workers, working 40 hours per week and 50 weeks per year; EH = number of exposure hours, total hours worked by all employees during the survey year.

4. Incidence rates of total cases and numbers of total cases include fatalities, in addition to lost workday cases, and nonfatal cases without lost workdays. However, because of rounding, the sum of the rates (and the sum of the numbers) for lost workday cases and nonfatal cases without lost workdays may not equal the total. Similarly, the difference between the total and the sum of the components shown may not reflect the fatality rate.

Note: DASHES indicate no data reported. ASTERISKS (\*) in Tables 1, 2, and 3 indicate incidence rates of cases/workdays less than 0.05 per 100 workers; in Tables 4, 5, and 6 asterisks (\*) indicate numbers of cases/workdays less than 5.

Data conforming to OSHA definitions for coal and lignite mining (SIC 10) and for railroad transportation (SIC 40) were provided by the Mine Safety and Health Administration, U.S. Department of Labor, and by the Federal Railroad Administration, U.S. Department of Transportation. Data for independent contractors who perform services for construction on mining sites are also included.

## APPENDIX A: SCOPE OF THE SURVEY & TECHNICAL NOTES

## SCOPE OF THE 1989 OSH SURVEY

The 1989 OSH Injuries and Illnesses Survey relates to the following Industry Divisions in the State of Maine: Agriculture, Forestry & Fishing (SIC 01-09); Mining (SIC 10-14); Contract Construction (SIC 15-17); Manufacturing (SIC 20-39); Transportation & Public Utilities (SIC 40-49); Wholesale Trade (SIC 50-51); Retail Trade (SIC 52-59); Finance, Insurance, & Real Estate (SIC 60-67); and Services (SIC 70-89), except Private Households (SIC 88). In addition, information was received from Federal sources on the injuries and illnesses at Maine's 102 railroad and mining establishments, which are surveyed separately.

All employees (part-time, temporary, etc.) in industries listed above are covered. Excluded are self-employed individuals, agricultural employers with fewer than eleven workers, domestic employers, and federal/state/local government units.

Survey questionnaires were initially mailed to 3,894 sample units. A relatively small proportion (335 or 8.6 percent) of these were later excluded because they were no longer in operation, were found not to be within the scope of the survey, were included in a report that was completed for another location, received duplicate survey forms for the same establishment, or were not deliverable by the Postal Service because of an inadequate address. Original and follow-up mailings and/or telephone calls resulted in 3,351 usable questionnaires out of a possible 3,559 for a 94.2 percent usable response rate.

# ESTIMATING PROCEDURE

Estimates of the numbers of injuries and illnesses in each sampled industry were obtained by first weighting the data for each reporting unit by the reciprocal of the sampling ratio for each industry and employment size group. Each of the sampling cell estimates was then adjusted for nonresponse. Finally, the aggregate data for each industry was adjusted for births by benchmarking, a form of ratio estimation using an independent determination of actual employment.

#### INDUSTRIAL CLASSIFICATION

Reporting units are classified into industries on the basis of their principal product or activity determined by information entered in Section III (Nature of Business) of the survey questionnaire. For a reporting unit making more than one product or engaging in more than one activity, data for the unit are included in the industry indicated by the respondent as the most important product or activity.

# STANDARD INDUSTRY MIX

Because rates among industries vary greatly, caution is necessary when making comparisons between incidence rates produced for different jurisdictions. In making such comparisons, one could draw the wrong conclusion that a state with a concentration of employment in industries with high incidence rates (such as Maine) has a poor overall safety record when compared with the national rate or with rates from other states.

To overcome this bias, estimates for each state can be recalculated to a common employment base using data from the level lower than the level being compared. For example, if the desired result was an All-Industry state rate adjusted to the national mix of industries, data from the Industry Division level would be used. This process is called the Standard Industry Mix (SIM), and the formula is shown below:

$$X_i$$
=national employment for the i<sup>th</sup> industry
$$X_i = \text{national employment for the i}^{th} \text{ industry}$$

$$X_i = \text{national employment for the i}^{th} \text{ industry}$$

$$X_i = \text{national employment for the i}^{th} \text{ industry}$$

$$X_i = \text{national employment for the i}^{th} \text{ industry}$$

$$X_i = \text{national employment for the i}^{th} \text{ industry}$$

$$X_i = \text{national employment for the i}^{th} \text{ industry}$$

$$X_i = \text{national employment for the i}^{th} \text{ industry}$$

$$X_i = \text{national employment for the i}^{th} \text{ industry}$$

$$X_i = \text{national employment for the i}^{th} \text{ industry}$$

By this method, a state's rates can be adjusted to the U.S. economy's mix of industries, as was done for Maine in Section IX. Remaining differences are then clearly due to other factors.

# I.S. Department of Labor ureau of Labor Statistics for the Occupational afety and Health Administration

#### 1989 OSHA No. 200-S ANNUAL OCCUPATIONAL INJURIES AND ILLNESSES SURVEY (Covering Calendar Year 1989)

THIS REPORT IS MANDATORY UNDER PUBLIC LAW 91-596. FAILURE TO REPORT CAN RESULT IN THE ISSUANCE OF CITATIONS AND ASSESSMENT OF PENALTIES

O.M.B. NO. 1220-0045 Approval expires 6/30/91

ANNUAL AVERAGE EMPLOYMENT IN 1989 Enter the average number of employees who worked during calendar year 1993 in the establishment(s) covered by this report, include all classes of employees: full-time, part-time, seasonal, temporary, etc. See the instructions for an example of an annual average employment calculation. (Round to the nearest whole number.)	II. TOTAL HOURS WORKED IN 1989 Enter the total nur hours actually wo during 1989 by all ployees covered to report. DO NOT in any non-worktime though paid sick etc. If employees Iow hours in 1989 tayoffs, strikes, fire explain under con (Section VII), (Root he nearest whole number.)	A Chibest di type of riced empthis cluded even leave, worked due to es, etc., ments in di to en leave, indi to en leave, etc., ments in constitutione de la constitution de la constitut	describes the general of activity performed to establishmen(s) index in this report. #### SURVEY REPORTING REGULATIONS

Title 29, Part 1904, 20-22 of the Code of Federal Regulations requires that: each employer shall return the completed survey form, OSHA No. 200-S, within 3 weeks of receipt in accordance with the instructions

#### INSTRUCTIONS FOR COMPLETING THE OSHA NO. 200-S FORM 1989 OCCUPATIONAL INJURIES AND ILLNESSES SURVEY (Covering Calendar Year 1989)

Change of Ownership-When there has been a change of ownership during the report period, only the records of the current owner are to be entered in the report. Explain fully under Comments (Section VII), and include the date of the ownership change and the time period this report covers

Partial-Year Reporting—For any establishment(s) which was not in existence for the entire report year, the report should cover the portion of the period during which the establishment(s) was in existence. Explain fully under Comments (Section VII), including the time period this report covers.

#### **ESTABLISHMENTS INCLUDED IN THE REPORT**

This report should include only those establishments located in, or identified by, the Report Location and Identification designation which appears above your mailing address. This designation may be a geographical area, usually a country or city, or it could be a brief description of your operation within a geographical area. If you have any questions concerning the coverage of this report, please contact the agency identified on the OSHA No. 200-S report form.

#### **DEFINITION OF ESTABLISHMENT**

An ESTABLISHMENT is defined as a single physical location where business is conducted or where services or industrial operations are performed. (For example: a factory, mill, store, hotel, restaurant, movie theatre, farm, ranch, bank, sales office, warehouse, or central administrative office.)

For firms engaged in activities such as construction, transportation, communication, or electric, gas and sanitary services, which may be physically dispersed, reports should cover the place to which employees normally report each day.

Reports for personnel who do not primarily report or work at a single establishment, such as traveling salesmen, technicians, engineers, etc., should cover the location from which they are paid or the base from which personnel operate to carry out their activities.

#### ANNUAL AVERAGE EMPLOYMENT IN 1989

Enter in Section 1 the average (not the total) number of full and part-time employees who worked during calendar year 1989 in the establishment(s) included in this report. If more than one establishment is included in this report, add together the annual average employment for each establishment and enter the sum. Include all classes of employees — seasonal, temporary, administrative, supervisory, clerical, professional, technical, sales, delivery, installation, construction and service personnel, as well as operators and related workers.

Annual Average employment should be computed by summing the employment from all pay periods during 1989 and then dividing that sum by the total number of such pay periods throughout the entire year, including periods with no employment. For example, if you had the following monthly employment —

Jan.-10; Feb.-10; Mar.-10; Apr.-5; May-5; June-5; July-5; Aug.-0; Sept.-0; Oct.-0; Nov.-5; Dec.-5—you would sum the number of employees for each monthly pay period (in this case; 60) and then divide that total by 12 (the number of pay periods during the year) to derive an annual average employment of 5.

### TOTAL HOURS WORKED IN 1989

Enter in Section 11 the total number of hours actually worked by all classes of employees during 1989. Be sure to include ONLY time on duty. DO NOT include any non-work time even though paid, such as vacations, sick leave, holidays, etc. The hours worked figure should be obtained from payroll or other time records wherever possible; if hours worked are not maintained separately from hours paid, please enter your best estimate. If actual hours worked are not available for employees paid on commission, salary, by mile, etc., hours worked may be estimated on the basis of scheduled hours or 8 hours per workday. For example, if a group of 10 salaried employees worked an average of 8 hours per day, 5 days a week, for 50 weeks of the report period, the total hours worked for this group would be  $10 \times 8 \times 5 \times 50 = 20,000$  hours for the report period.

#### NATURE OF BUSINESS IN 1989

In order to verify the nature of business code, we must have information about the specific economic activity carried on by the establishment(s) included in your report during calendar 1989.

Complete Parts A, B and C as indicated in Section III on the OSHA No. 200-S form. Complete Part C only if supporting services are provided to other establishments of your company. Leave Part C blank if a) supporting services are not the primary function of any establishment(s) included in this report or b) supporting services are provided but only on a contract or fee basis for the general public or for other business firms.

NOTE: If more than one establishment is included, information in Section III should reflect the combined activities of all such establishments. One code will be assigned which best indicates the nature of business of the group of establishments as a whole.

### MONTH OF OSHA INSPECTION

Enter the name of the first month in 1989 during which your establishment(s) had an OSHA compliance inspection. Include inspections under the Federal or State equivalents of the Occupational Safety and Health Act by Federal or State inspectors and other inspections which may result in penalties for violations of safety and health standards. Do not include inspections limited to elevators, boilers, fire safety or those which are consultative in nature.

### RECORDABLE INJURIES OR ILLNESSES

Check the appropriate box. If you checked "Yes", complete Sections VI and VII. If you checked "No", complete only Section VII.

### OCCUPATIONAL INJURY AND ILLNESS SUMMARY

This section can be completed easily by copying the totals from the annual summary of your 1989 OSHA No. 200 form (Log and Summary of Occupational Injuries and Illnesses). Please note that if this report covers more than one establishment, the final totals on the "Log" for each must be added and the sums entered in Section VI.

Leave Section VI blank if the employees covered in this report experienced no recordable injuries or illnesses during 1989.

If there were recordable injuries or illnesses during the year, please review your OSHA No. 200 form for each establishment to be included in this report to make sure that all entries are correct and complete before completing Section VI. Each recordable case should be included on the "Log" in only one of the six main categories of injuries or illnesses:

- 1. INJURY-related deaths (Log column 1)
- 2. INJURIES with lost workdays (Log column 2)
  3. INJURIES without lost workdays (Log column 6)

- 4. ILLNESS-related deaths (Log column 8)
  5. ILLNESSES with lost workdays (Log column 9)
  6. ILLNESSES without lost workdays (Log column 13)

Also review each case to ensure that the appropriate entries have been made for the other columns if applicable. For example, if the case is an Injury with Lost Workdays, be sure that the check for an injury involving days away from work (Log column 3) is entered if necessary. Also verify that the correct number of days away from work (Log column 4) and/or days of restricted work activity (Log column 5) are recorded. A similar review should be made for a case which is an Illness with Lost Workdays (including Log columns 10, 11 and 12). Please remember that if your employees' loss of workdays is still continuing at the time the annual summary for the year is completed, you should estimate the number of future workdays they will lose and add this estimate to the actual workdays already lost. Each partial day away from work, other than the day of occurrence of the injury or onset of illness, should be entered as one full restricted work day.

Also, for each case which is an Illness, make sure that the appropriate column indicating Type of Illness (Log columns 7a-7g) is checked.

After completing your review of the individual entries on the "Log", please make sure that the "Totals" line has been completed by summarizing Columns I through 13 according to the instructions on the back of the "Log" form. Then, copy these "Totals" onto Section VI of the OSHA No. 200-S form.

If you entered fatalities in columns (1) and/or (8), please include in the "comments" section a brief description of the object or event which caused each

### FIRST AID

Finally, please remember that all injuries which, in your judgement, required only First Aid Treatment even when administered by a doctor or nurse, should not be included in this report. First Aid Treatment is defined as one-time treatment and subsequent observation of minor scratches, cuts, burns, splinters, etc., which do not ordinarily require medical care.

### COMMENTS AND IDENTIFICATION

Please complete all parts including your area code and telephone number. Then return the OSHA No. 200-S form in the pre-addressed envelope. KEEP your

## APPENDIX C: Recordkeeping Summary

Basic recordkeeping concepts and guidelines are included with instructions on the back of form OSHA No. 200. The following summarizes the major recordkeeping concepts and provides additional information to aid in keeping records accurately.

## Determining recordability

- 1. An injury or illness is considered work-related if it results from an event or exposure in the work environment. The work environment is primarily composed of the following areas: 1) The employer's premises, and 2) any other locations where employees are engaged in work-related activities or are present as a condition of their employment. The employer's premises encompass the total establishment. This includes not only the primary facility, but also such areas as company storage facilities, cafeterias, and restrooms. In addition to physical locations, equipment or materials used in the course of an employee's work are also considered part of the employee's work environment.
- All work-related fatalities are recordable.
- 3. All recognized or diagnosed work-related illnesses are recordable.
- 4. All work-related injuries requiring medical treatment, involving loss of consciousness, restriction of work or motion, or transfer to another job are recordable.

## Analysis of injuries

Each case is distinguished by the treatment provided for the injury, not where the treatment was provided. Those cases in which medical treatment was provided or should have been provided are recordable: if only first aid treatment was required, it is not recordable. However, medical treatment is only one of several criteria for determining recordability. Regardless of treatment, if the injury involved loss of consciousness, restriction of work or motion, or transfer to another job, the injury is recordable.

<u>Medical treatment</u>. The following procedures are generally considered medical treatment. Injuries for which this type of treatment was provided or should have been provided are almost always recordable if the injury is work-related:

- \*Treatment of infection
- \*Application of antiseptics during the second or subsequent visit to medical personnel
- \*Treatment of second or third degree burns
- \*Application of sutures (stitches)
- \*Application of butterfly adhesive dressing(s) or steri strip(s) in lieu of sutures
- \*Removal of foreign bodies embedded in eye
- \*Removal of foreign bodies from wound; if procedure is complicated because of depth of embedment, size, or location

# Recordkeeping Summary (Continued)

- \*Use of prescription medications (except a single dose administered on first visit for minor injury or discomfort)
- \*Use of hot or cold soaking therapy during second or subsequent visit to medical personnel
- \*Use of hot or cold compresses during second or subsequent visit to medical personnel
- \*Cutting away dead skin (surgical debridement)
- \*Application of heat therapy during second or subsequent visit to medical personnel
- \*Use of whirlpool bath therapy during second or subsequent visit to medical personnel
- \*Positive x-ray diagnosis (fractures, broken bones)
- \*Admission to a hospital or equivalent medical facility for treatment

**First Aid Treatment.** First aid treatment is one-time treatment and subsequent observation of minor injuries. The following procedures are generally considered first aid treatment and should **not** be recorded if the injury does not involve loss of consciousness, restriction of work or motion, or transfer to another job:

- \*Application of antiseptics during first visit to medical personnel
- \*Treatment of first degree burns
- \*Application of bandages during any visit to medical personnel
- \*Use of elastic bandages during first visit to medical personnel
- \*Removal of foreign bodies not embedded in eye if only irrigation is required
- \*Removal of foreign bodies from wound; if procedure is uncomplicated, and is, for example, by tweezers or other simple technique
- \*Use of nonprescription medications and administration of single dose of prescription medication on first visit for minor injury or discomfort
- \*Soaking therapy on initial visit to medical personnel or removal of bandages by soaking
- \*Application of hot or cold compresses during first visit to medical personnel
- \*Application of ointments to abrasions to prevent drying or cracking
- \*Application of heat therapy during first visit to medical personnel
- \*Use of whirlpool bath therapy during first visit to medical personnel
- \*Negative x-ray diagnosis
- \*Observation of injury during visit to medical personnel

The following procedure, by itself, is **not** considered medical treatment: Administration of Tetanus Shots or Boosters. However, these shots are often given in conjunction with more serious injuries; consequently, injuries requiring these shots may be recordable for other reasons.

# APPENDIX D: TOTAL CASE INCIDENCE RATES FOR SELECTED STATES AND FOR THE UNITED STATES, 1988 SEQUENCED ALPHABETICALLY BY NAME

STATE	Total	Total Lost	Total Lost

# APPENDIX E: RELIABILITY OF ESTIMATES

Due to technical problems encountered by the U.S. Bureau of Labor Statistics in converting Variance programs to personal computer systems, the relative standard errors necessary to produce Text Table N were not available. Corrections will be made and the data will be available next year.

### APPENDIX F: GLOSSARY

<u>Average lost workdays per lost workday case:</u> The number of lost workdays divided by the number of lost workday cases.

<u>Days away from work:</u> The number of days (consecutive or not) the employee would have worked but was absent from work because of occupational injury or illness. The number of days away from work does not include the day of injury or the onset of illness.

<u>Days of restricted work activity:</u> The number of workdays (consecutive or not) on which, because of injury or illness, one or more of the following occurs: (1) the employee was assigned to another job on a temporary basis; (2) the employee worked at a permanent job less than full time; or (3) the employee worked at a permanently assigned job but could not perform all duties normally connected with it.

<u>Employment-size Group:</u> Establishments with a specified range of average employment.

<u>Establishment:</u> A single physical location where business is conducted or where services or industrial operations are performed. Distinctly separate activities are performed at a single physical location, such as construction activities operated from a separate establishment.

<u>First-aid treatment:</u> A one-time treatment and subsequent observation of minor scratches, cuts, burns, splinters, etc., which do not ordinarily require medical care. (See Appendix C.)

<u>Incidence rate:</u> The number of injuries and illnesses, or lost workdays experienced by 100 full-time workers. (See Section II.)

<u>Industry Division</u> – see Standard Industrial Classification

Industry Group - see Standard Industrial Classification

<u>Lost workdays</u>: The sum of days away from work and days of restricted work activity (see above). The number of lost workdays does not include the day the injury occurred or the day the illness was discovered.

<u>Medical treatment</u>: Includes treatment administered by a physician or by registered professional personnel under the standing orders of a physician. However, medical treatment does NOT include first-aid treatment (one-time treatment and subsequent observation of minor scratches, cuts, burns, splinters and so forth) which does not ordinarily require medical care even though provided by a physician or registered professional personnel. (See Appendix C.)

### APPENDIX F (CONTINUED)

Occupational fatality: Death resulting from a traumatic accident or an exposure in the work environment.

Occupational illness: Any abnormal condition or disorder, other than one resulting from an occupational injury, caused by exposure to environmental factors associated with employment. It includes acute and chronic illnesses or diseases which may be caused by inhalation, absorption, ingestion, or direct contact, and which can be included in the categories listed below. The following categories are used by employers to classify recordable occupational illnesses:

- (7a) Occupational skin diseases or disorders, for example: contact dermatitis, eczema, or rash caused by primary irritants and sensitizers or poisonous plants; oil acne, chrome ulcers; chemical burns or inflammations; etc.
- (7b) Dust diseases of the lungs (pneumoconioses), for example: silicosis; asbestosis; coal worker's pneumoconiosis; byssinosis, siderosis; and other pneumoconioses.
- (7c) Respiratory conditions due to toxic agents, for example: pneumonitis, pharyngitis, rhinitis or acute congestion due to chemicals, dusts, gases or fumes; farmer's lung; etc.
- (7d) Poisoning (systemic effects of toxic materials), for example: poisoning by lead, mercury, cadmium, arsenic, or other metals; poisoning by carbon monoxide, hydrogen sulfide or other gases; poisoning by benzol, carbon tetrachloride, or other organic solvents; poisoning by insecticide sprays such as parathion, lead arsenate; poisoning by other chemicals such as formaldehyde, plastics and resins; etc.
- (7e) Disorders due to physical agents (other than toxic materials), for example: heatstroke, sunstroke, heat exhaustion and other effects of environmental heat; freezing, frostbite and effects of exposure to low temperatures; caisson disease; effects of ionizing radiation (isotopes, xrays, radium); effects of nonionizing radiation (welding flash, ultraviolet rays, microwaves, sunburn); etc.
- (7f) Disorders associated with repeated trauma, for example: noise-induced hearing loss; synovitis, tenosynovitis, and bursitis; Raynaud's phenomena; and other conditions due to repeated motion, vibration, or pressure.
- (7g) All other occupational illnesses, for example: anthrax; brucellosis; infectious hepatitis; malignant and benign tumors; food poisoning; histoplasmosis; coccidiodomycosis; etc.

### APPENDIX F (CONTINUED)

Occupational injury: Any injury such as a cut, fracture, sprain, amputation, etc., which results from a work accident or from exposure involving a single incident in the work environment.

<u>Publishable industry level:</u> An industry level (Division, Group, etc.) for which (1) average employment exceeded 1,500 during the survey year, and (2) no one firm or small number of firms so dominated the industry so as to jeopardize the guaranteed confidentiality of OSH Survey data.

Recordable occupational injuries and illnesses: Any occupational injuries or illnesses which result in (1) FATALITIES, regardless of the time between the injury and death, or the length of the illness; (2) LOST WORKDAY CASES, other than fatalities, that result in lost workdays; or (3) NONFATAL CASES WITHOUT LOST WORKDAYS, which result in transfer to another job or termination of employment, require medical treatment, or involve loss of consciousness or restriction of work or motion. This third category also includes any diagnosed occupational illnesses which are reported to the employer but are not classified as fatalities or lost workday cases.

Report form: The OSHA No. 200-S survey questionnaire used as the data collection vehicle for the OSH Survey. (See Appendix B.)

SIC - see Standard Industrial Classification

Standard Industrial Classification: A classification system developed by the Office of Statistical Standards, Executive Office of the President/Office of Management and Budget for use in the classification of establishments by type of activity in which they are engaged. Each establishment is assigned an industry code for its major activity which is determined by the product, group of products, or services rendered. Establishments may be classified in 2-digit, 3-digit, or 4-digit industries, according to the degree of information available. An industry division is the broadest level (other than the total private sector) at which estimation is performed in the OSH Survey in Maine, and is identified by a range of SIC codes. (For example, SIC's 20 through 39 represent the Manufacturing Division). An industry group is identified by one 2-digit code.

## APPENDIX G: COMMENTS FORM

Your comments about this publication will help us make improvements. We are interested in any feedback concerning its usefulness, accuracy, organization, and completeness. Requests for additional copies will be filled subject to availability (See Appendix H). Requests for further details on this subject should be sent to the Bureau Director at the address below. These requests may be denied due to confidentiality restrictions.
