Financial Regulation**

**To the Joint Standing Committee on Business, Research
and Economic Development**

On

**Public Law 2006, Chapter 237
(LD 1508)**

***“Resolve Directing the Department of Professional and
Financial Regulation to Conduct a Sunrise Review
Regarding the Regulation of Fire Alarm Contractors”***

January 15, 2007

***John Elias Baldacci
Governor***

***Anne L. Head
Acting Commissioner***

I. Introduction

LD 1508, in its original form, provided for a new regulatory program for fire alarm installation contractors and triggered application of the sunrise review statute (5 MRSA § 12015(3)). The Joint Standing Committee on Business, Research and Economic Development amended the bill to require sunrise review (independent assessment) of the proposal. The bill was enacted as Public Law 2006, chapter 137. This report reflects the independent assessment of the Commissioner of the Department of Professional and Financial Regulation as to whether the health, welfare and safety of Maine citizens warrants regulation of individuals and companies that install fire alarm systems.

II. Sunrise Review

Pursuant to 5 MRSA § 12015(3), “sunrise review” is required when a legislative proposal calls for creation of a regulatory program for a profession or occupation not previously regulated, or that proposes to expand existing regulation. Sunrise review is a systematic review of proposed new or expanded regulation undertaken to assist the Maine Legislature in determining when state regulation is necessary to protect the health, safety, and welfare of the public.

The sunrise review process consists of applying the evaluation criteria established by statute, 32 MRSA § 60-J, to the proposed system of regulation to determine whether the occupation or profession should be regulated, or whether current regulation should be expanded.

Under Maine statute, the sunrise review process may be conducted in one of three ways:

1. The Joint Standing Committee of the Legislature considering the proposed legislation may hold a public hearing to accept information addressing the evaluation criteria;
2. The Committee may request the Commissioner of the Department of Professional and Financial Regulation to conduct an independent assessment of the applicant’s answers to the evaluation criteria and report those findings back to the Committee; or
3. The Committee may request that the Commissioner establish a technical review committee to assess the applicant’s answers and report its finding to the Commissioner.

In this case, an independent assessment of proposed regulation was requested by the Maine Legislature. Copies of 5 MRSA § 12015(3) and a summary of the Sunrise Review process are included in **Appendix A**.

III. Charge to the Commissioner from the Maine Legislature

Public Law 2006, chapter 137 as enacted by the 122nd Maine Legislature, requires the Commissioner of the Department of Professional and Financial Regulation to conduct an independent assessment (“sunrise review”) pursuant to the provisions of Title 32, sec. 60(k), of the proposal to regulate the activity of fire alarm contractors. This report documents the methodology of the Commissioner’s assessment and includes recommendations for consideration by the Joint Standing Committee on Business, Research and Economic Development in the 123rd Legislature.

IV. Independent Assessment by Commissioner

The requirements for an independent assessment by the Commissioner are set forth in 32 MRSA § 60-K. The Commissioner is required to apply the specified evaluation criteria set forth in 32 MRSA § 60-J to all answers and information submitted to, or collected by, the Commissioner. After conducting the independent assessment, the Commissioner must submit a report to the Committee setting forth recommendations, including any draft legislation necessary to implement the report’s recommendations.

The Commissioner’s report to the Joint Standing Committee on Business, Research and Economic Development must contain an assessment about whether final answers to the evaluation criteria are sufficient to support some form of regulation. In addition, if there is sufficient justification for some form of regulation, the report must recommend an agency of State government to be responsible for the regulation and the level of regulation to be assigned to the applicant group. Finally, the report must reflect the least restrictive method of regulation consistent with the public interest.

V. Current Regulatory Environment in Maine

The State of Maine has implemented a variety of methods of regulating for public safety in the area of fire protection and fire suppression systems. First, the State Fire Marshal’s Office within the Department of Public Safety has statutory authority to regulate companies and individuals that install fire suppression systems including fire sprinkler systems (See 32 MRSA Sec. 1371 et seq.). The State Fire Marshal’s Office (SFMO) has adopted many chapters of the National Fire Protection Association (NFPA) fire and life safety codes. According to information provided by the SMFO for this report, there are approximately 106 fire sprinkler system installers registered with that agency and working in Maine.

The Board of Licensure of Professional Engineers provides a second source of regulation of this industry by licensing and regulating professional Fire Protection Engineers. The Board indicates that fire protection engineers routinely design, install, test, maintain and inspect fire alarm systems as permitted by the statutory scope of practice for licensed professional engineers.

Finally, the Electricians' Examining Board within the Department of Professional and Financial Regulation licenses and regulates licensed electricians and electrical contractors and has statutory authority to issue limited low-voltage licenses to individuals and companies that employ licensed electricians who are permitted to install fire alarm systems in residential and commercial settings. Information provided by the Electricians' Examining Board (EEB) for this sunrise report indicates that in addition to the 5813 licensed master and journeyman electricians who are qualified to install fire alarm systems, there are also 286 Limited to Low Voltage licensees who are permitted to install low-voltage electrical systems. In addition, there are 36 electrical contractors (companies) licensed by the Office of Licensing and Registration which employ licensed electricians to install fire alarm and other low-voltage systems.

VI. Evaluation Criteria

As part of the independent assessment process, the Commissioner must review and assess the responses to the evaluation criteria submitted by the applicant group and interested parties. In this instance, Norris Incorporated, owned and operated by Mr. Harty Norris, is considered the "applicant group."

To begin the assessment process, the Department forwarded sunrise survey instruments to Norris Incorporated and to the State Fire Marshal's Office. Both entities had been involved in prior legislative discussions on the issue of fire alarm contractor regulation and each entity submitted completed sunrise surveys which are appended to this report in **Appendix B**. Both entities support new regulation of fire alarm installation contractors within the SFMO.

Survey instruments were also sent to and responses solicited from the Maine Burglar and Fire Alarm Association (MBFAA) and the Maine Board of Registration of Professional Engineers. MBFAA did not respond to the Department's invitation to submit comments. The Board of Licensure of Professional Engineers Board submitted a statement raising concerns about regulation of fire alarm installers without indicating support or opposition to the proposal that led to sunrise review. Subsequent to its initial response, the Professional Engineers Board supplemented its statement with additional information. The Board's responses and information are appended as part of Appendix B.

The Department's analysis tracks the evaluation criteria set forth in 32 MRSA § 60-J, and is presented in this report as follows:

1. The evaluation criteria, as set forth in statute;
2. A summary of the responses received from the applicant group and interested parties;
and
3. The Department's assessment of the response to the evaluation criteria.

Evaluation Criterion #1: Data on group proposed for regulation. A description of the professional or occupational group proposed for regulation or expansion of regulation, including the number of individuals or business entities that would be subject to expanded regulation; the names and addresses of associations, organizations and other groups representing the practitioners; and an estimate of the number of practitioners in each group.

Responses:

Harty Norris, of Norris Incorporated, did not submit a specific description of the group that would be subject to regulation under this proposal. He did indicate, however, that the bill submitted on his behalf was not designed to be a licensing bill. Finally, Mr. Norris listed the Maine Burglar and Fire Alarm Association as an organization that would represent potential licensees.

The State Fire Marshal's Office responded that 300 burglar and fire alarm contractors and 1500 electricians would make up the group subject to state regulation. The response also listed the Maine Burglar and Fire Alarm Association located in West Rockport, Maine, as an organization that would represent potential licensees. It was upon the receipt of this information that a separate sunrise survey was forwarded to the MBFAA. The SFMO also listed the Automatic Fire Alarm Association in Lake Mary, Florida and the National Burglar and Fire Alarm Association in Irving, Texas as organizations that might represent potential licensees. Finally, the SFMO stated that there would not be any new licensing under the proposal being studied.

Department assessment:

Although the proponent of LD 1508 may not have intended for there to be new licensing of a profession or occupation, "licensing" is one of several terms used interchangeably to describe state oversight and regulation of individual conduct or business activity to ensure public protection. Currently, the State Fire Marshal's Office is required by statute to administer a registration program for companies that install fire suppression systems. These systems include fire sprinkler systems and other fire suppression systems. Regardless of the term used to describe the proposed program for fire alarm contractors, the proposal contemplates a state program that would prohibit companies or individuals from installing fire alarm systems without a license to do so.

It appears that the intended target group, that is, fire alarm system installers, is already subject to regulation through the Electricians' Examining Board.

Evaluation Criterion #2: Specialized skill. Whether practice of the profession or occupation proposed for expansion of regulation requires such a specialized skill that the public is not qualified to select a competent practitioner without assurances that minimum qualifications have been met.

Responses:

Mr. Norris responded that specialized skill would include “knowledge of systems operation, testing installation to comply with Life Safety Codes.”

The SFMO responded that “as with any type of specialized contractor, the public needs to do its homework about who they hire in order to be sure that the installation will be professional.”

Department Assessment:

The licensing law of the Electricians’ Examining Board sets forth the minimum requirements that must be satisfied in order to be permitted to install fire alarm systems. All master electricians and journeyman electricians as well as limited to low-energy licensees are qualified to install and test these installations. The statutory provisions at issue in this review are attached as **Appendix C**.

Evaluation Criterion #3: Public health; safety; welfare. The nature and extent of potential harm to the public if the profession or occupation is not regulated, the extent to which there is a threat to the public’s health, safety or welfare and production of evidence of potential harm, including a description of any complaints filed with state law enforcement authorities, courts, departmental agencies, other professional or occupational boards and professional and occupational associations that have been lodged against practitioners of the profession or occupation in this State within the past 5 years.

Responses:

Mr. Norris notes that there is potential harm to the public if the “installation and testing of life safety systems are below NPFA minimum standards.” He further asserts that “many systems are not installed in accordance with NFPA Codes.”

The SFMO responded that “if a fire alarm system does not operate properly, then building occupants may not have sufficient time to exit the building before fire and smoke endanger their lives during the event of a fire.” In addition, “we (SFMO) have heard of complaints of improper installations, and installations that cause false alarms, but have not received any formal written complaints.”

Department assessment:

There is potential harm to occupants of a structure if a fire alarm system installed in the structure fails to operate correctly in the event of a fire. Evidence of harm to the public in the absence of regulation is a key factor to be considered in the course of most sunrise reviews. In the context of this report, however, evidence of consumer complaints against companies and individuals who install fire alarm systems is an important set of data to be

considered when the Legislature evaluates the public need for *expanded* regulation of fire alarm installers. The staff of the Electricians' Examining Board has reviewed the complaints filed within the past five years against licensed electrical companies and licensed electricians. The staff could identify no complaint that focused on improper installation of a fire alarm system. To date, there is no hard evidence of actual harm to the public in the absence of regulation beyond that provided through the Electricians' Examining Board. (See Appendix D.)

Evaluation Criterion #4: Voluntary and past regulatory efforts. A description of the voluntary efforts made by practitioners of the profession or occupation to protect the public through self-regulation, private certifications, membership in professional or occupational associations or academic credentials and a statement of why these efforts are inadequate to protect the public.

Responses:

Mr. Norris indicated that “the Association,” presumably the Maine Burglar and Fire Alarm Association, has promoted certifications and NICET qualification standards.

The SFMO indicated that “only a few have become “UL certified” and that “most of the larger contractor companies are members of the Maine Burglar and Fire Alarm Association.” Further, “electricians obtain low-voltage wiring licenses.” Finally, SFMO asserts that the “vast majority of installers are not members of an association and even more are not monitored by a third party such as Underwriters Laboratory.

Department assessment:

Information submitted by the State Fire Marshal's Office indicates that although the Maine Burglar and Fire Alarm Association has promoted private certification among its members in the past, the concept of private certification has not been embraced by association members.

Evaluation Criterion #5. Costs and benefits of regulation. The extent to which regulation or expansion of regulation of the profession or occupation will increase the cost of goods or services provided by practitioners and the overall cost-effectiveness and economic impact of the proposed regulation, including the indirect costs to consumers.

Responses:

Mr. Norris responded that “the cost of a state inspection sticker and UL certification would be plus or minus \$35 per year.”

The SFMO stated that under this proposal, “each installation would increase in cost by the cost of a sticker issued by our office, plus the cost of inspection by a third-party verifier. The sticker cost would be minimal, approximately \$20.

Department assessment:

The additional cost of expanding an existing regulatory program is typically passed along to the consumer of the product or service. The cost associated with additional regulation of fire alarm contractors is unclear from the responses received.

Evaluation Criterion #6: Service availability under regulation. The extent to which regulation or expansion of regulation of the profession or occupation would increase or decrease the availability of services to the public.

Responses:

Mr. Norris stated that service available under regulation “would decrease as some providers may not opt for UL certification costs and requirements.”

The SFMO indicated that there would be no change in availability of service.

Department Assessment:

In general, imposing additional regulation on an already regulated group results in a decrease in licensee numbers. That decrease may, in turn, decrease the availability of services to the public in the area of fire alarm installer services. A decrease in the availability of services caused by imposing additional requirements on the licensed group, in the absence of compelling documented safety issues and concerns, does not result in a net benefit to the public.

Evaluation Criterion #7: Existing laws and regulations. The extent to which existing legal remedies are inadequate to prevent or redress the kinds of harm potentially resulting from non-regulation and whether regulation can be provided through an existing state agency or in conjunction with presently regulated practitioners.

Responses:

Mr. Norris stated that the SFMO is currently overseeing enforcement of NFPA Codes, but it does not have any authority over electrical contractors or alarm installers.

The SFMO states that there is presently no licensing of installers other than the electricians low-energy wiring licenses. Moreover, there is no third-party verification of installation work, according to the SFMO.

Department Assessment:

It is true that the State Fire Marshal’s office does not have statutory authority to regulate electrical contractors and installers of fire alarm systems. The Maine Legislature granted

that authority to the Electricians' Examining Board. The Board, through its licensing process and its administrative complaint process ensures that the public is protected in the manner mandated by the Maine Legislature.

The Board has adopted various chapters of the National Electric Code which cover installation of low-voltage electrical systems. Electrical contractors who employ electricians to install fire alarm system are also required to be licensed by the EEB. Individuals and companies that design fire alarm systems may also be required to be licensed, in many instances, by the Board of Licensure of Professional Engineers.

Evaluation Criterion #8: Method of regulation. Why registration, certification, license to use the title, license to practice or another type of regulation is being proposed, why that regulatory alternative was chosen and whether the proposed method of regulation is appropriate.

Responses:

Mr. Norris responded that third-party oversight by UL is in place in numerous jurisdictions and is an industry standard which has been used on the security system side of alarms for years.

The SFMO responded that the "sticker method of third-party verification is chosen to keep things simple for all parties involved, and to avoid additional licensing which would be inappropriate seeing that electricians already have licensing oversight."

Department assessment:

Any discussion of the appropriateness of one method of regulation over another would be premature at this time.

Evaluation Criterion #9: Other states. Please provide a list of other states that regulate the profession or occupation, the type of regulation, copies of other states' laws and available evidence from those states of the effect of regulation on the profession or occupation in terms of a before-and-after analysis.

Responses:

Mr. Norris indicated that Texas, Florida and Maryland regulate fire alarm contractors.

The SFMO indicated that Delaware appears to regulate this profession through the State Fire Marshal's Office which requires a certificate of completion from the installing contractor. California regulates fire alarm contractors installing systems in schools. Oregon has laws regarding smoke detectors, but not fire alarm systems.

Department assessment:

States have developed widely differing governmental structures for regulating professions and occupations. Each state's arrangement evolves over time and various factors including funding, staffing, and political environment affect how professions and occupations are regulated.

To illustrate the variety of arrangements in other states the Department obtained a recent survey from the National Association of Electrical Contractors which is attached to this report as **Appendix E**. The survey indicates that of the 47 states responding:

- 20 states regulate fire alarm contractors through an electricians licensing entity similar to the Maine EEB;
- 10 states reported no state level regulation;
- 7 states regulate fire alarm installers through a contractors licensing entity,
- 4 states reported that regulation of this group is within the statutory responsibilities of the State's Fire Marshal's Office; and
- 6 states had licensing programs located within the Department of Health, Department of Public Safety or the Secretary of State's Office.

Maine is in the majority of states that regulate fire alarm contractors and installers through the electricians licensing entity.

Evaluation Criterion #10: Previous efforts to regulate. Please provide the details of any previous efforts in this State to implement regulation of the profession or occupation.

Responses:

Mr. Norris indicates that LD 1508 was proposed in prior legislative sessions in Maine but was taken back when it became apparent that misinformation about the requirements of the bill had been circulating. There was a misperception that the bill would bar electricians from installing fire alarm systems.

The SFMO indicates that this area has been the subject of discussion for about 10 years and that several different drafts have been developed. Several fire alarm companies have requested that the SFMO develop a regulatory law because they were impressed with the Office's successful regulation of the fire sprinkler industry for over fifteen years. They indicated an interest in being held to a consistent standard.

Department assessment:

No assessment necessary.

Evaluation Criterion #11: Minimal competence. Please describe whether the proposed requirements for regulation exceed the standards of minimal competence and what those standards are.

Responses:

Mr. Norris states that the minimum standards would be UL standards and the appropriate NFPA codes that have been adopted by the State of Maine.

The SFMO indicates that the current standard is the National Fire Protection Association's Fire Alarm Code #72 and that the proposed mechanism for regulation merely establishes a procedure to verify that NFPA 72 is adhered to.

Department assessment:

Minimum standards of competency for fire alarm contractors have been set by the Legislature through the Electricians' Examining Board.

Evaluation Criterion #12: Financial analysis. Please describe the method proposed to finance the proposed regulation and financial data pertaining to whether the proposed regulation can be reasonably financed by current or proposed licensees through dedicated revenue mechanisms.

Responses:

Mr. Norris did not respond to this criterion.

The SFMO states that "money generated from the sale of stickers would help fund a new position. Initially, the remainder of support would come from revenues generated by licenses and permit fees associated with the existing regulation of the fire sprinkler industry. This position would share responsibilities with regulating both industries."

Department Assessment:

The response of the State Fire Marshal's Office contemplates that the additional program costs associated with regulating fire alarm system installers and inspecting installations would be paid through a combination of dedicated revenue from existing licensees (application fees and inspection stickers associated with inspection of fire suppression systems) and from new dedicated revenue associated with application fees and the sale of inspection stickers for fire alarm installations. The Department of Professional and Financial Regulation does not have knowledge of how the State Fire Marshal's Office

funds its programs. Theoretically, however, the Department assumes that the added costs of regulation of fire alarm contractors by the SFMO would be paid, at least in part, by companies and individuals already licensed by the Electricians' Examining Board.

VII. Conclusions and Recommendations

State sunrise review law requires the Commissioner to engage in a two-step evaluation process guided by 13 statutory evaluation criteria. First, the Commissioner must evaluate the information provided by the applicant group in support of its proposal to regulate or expand regulation of a profession. Second, the Commissioner must recommend whether the Committee should take action on a proposal. If the Commissioner's recommendation supports regulation or expansion, the report must include any legislation required to implement that recommendation. The recommendation must reflect the least restrictive method of regulation consistent with the public interest.

The purpose of the sunrise process with respect to additional regulation of fire alarm contractors is to assess the public need for expanded regulation and the consequences to the public and to fire alarm contractors of the expansion of an existing regulatory program.

The following factors have been considered in formulating the Department's recommendations:

1. The absence of information that the public is in jeopardy because fire alarm contractors are not regulated by both the State Fire Marshal's Office and the Electricians' Examining Board;
2. The absence of information as to the estimated number of individuals and companies that install fire alarm systems that are not already licensed for this purpose by the Electricians' Examining Board;
3. The absence of documented complaints against individuals or businesses who have harmed Maine citizens because of how fire alarm systems have been installed and tested; and
4. Information indicating that the Maine Legislature intended the Electricians' Examining Board authority to license and regulate electricians, all of whom are qualified to install fire alarm systems, and to issue limited to low-energy licenses to individuals who meet the qualifications and requirements for that license;
5. Lack of response from individuals, companies or other interested parties in support or in opposition to the proposal.

The Department has reviewed and evaluated information supplied by the applicants and obtained by the Department and concludes that this information, when considered as a whole, does not support additional regulation of fire alarm contractors over and above the regulation and public protection currently provided by the Maine Legislature through the regulatory and inspection program of the Electricians' Examining Board.

The State Fire Marshal's Office is statutorily responsible for regulation of the fire sprinkler industry in Maine. Currently, the SFMO administers a registration program for companies and individuals involved in the installation of fire suppression systems, including sprinkler systems, in residential and commercial structures. Sprinkler systems involve significant piping, pipe fittings and drain connections to ensure that once triggered, the sprinkler system directs water to specific locations within the structure and suppresses a fire. There are currently 106 companies registered as approved sprinkler system installers with the SFMO. In addition, the SFMO registers "responsible managing supervisors" and inspectors who supervise the actual installation. Maine law requires that before a fire sprinkler system is installed, the plans for the installation must be reviewed and approved by the SFMO. At the time of renewal of the company's registration, a review is conducted of all previous installations to ensure that plans have been verified.

Fire alarm systems, on the other hand, are low energy wiring systems used to warn occupants of the existence of a fire—but they are not fire suppression systems. Maine law requires installers of these systems to be licensed by the Electricians' Examining Board because of their electrical components. All licensed master and journeyman electricians are qualified by virtue of their licenses to install these systems. In addition, the Board has created a special limited license for individuals who satisfy qualifications and requirements to obtain the limited license and who agree to limit their work to installation and testing of low energy systems. If installed improperly, licensees of the board can be disciplined pursuant to the statute and rules of the board. To date, no complaints have been filed by consumers or the Board, on its own motion, about the improper installation of a fire alarm system. There are currently 3,754 Active Master Electricians, 2,059 Active Journeyman electricians, and 286 limited to low energy electricians qualified to install fire alarm systems. The 36 electrical contractors (companies) licensed by the EEB are required to use licensed electricians to install these systems.

It appears from all information available to the Department that fire sprinkler system contractors are adequately regulated by the State Fire Marshal's Office and fire alarm system installers are adequately regulated by the Electricians Examining Board. Through these two entities of state government, the Maine Legislature has identified the potential harm to the public in the absence of regulation and has taken steps to protect the public.

The purpose of this sunrise review is to determine whether the public is placed at risk without expanded regulation of fire alarm contractors. In this case, the Department cannot identify justification for additional regulation of fire alarm installers through the State Fire Marshal's Office or through another entity of state government. The

Department concludes further that existing state regulatory programs adequately protect the health, safety and welfare of Maine citizens. The proposed expansion of regulation of fire alarm contractors by creating a program for fire alarm contractors that mirrors an existing regulatory program for fire suppression system installers is not warranted.

LD 1508

“Resolve, Directing the Department of Professional and Financial Regulation to Conduct a Sunrise Review Regarding the Regulation of Fire Alarm Contractors”

Sunrise Review Survey: Regulation of Fire Alarm Contractors

Please return the completed survey to the Commissioner's Office, 35 State House Station,
Augusta, ME 04333-0035.

General Information

1. Group or organization represented:

NORRIS INC.

2. Position on legislation. Does this group or organization support or
oppose regulation of fire alarm contractors?

SUPPORT

Evaluation Criteria (32 M.R.S.A. § 60-J)

1. Data on group proposed for regulation. Please provide a description of the
professional or occupational group proposed for regulation, including:
- (a) The number of individuals or business entities that would be subject to
regulation;

- (b) The names and addresses of associations, organizations and other groups representing potential licensees; and

MAINE BURGLAR AND FIRE ALARM ASSOC.

- (c) An estimate of the number of potential licensees in each group.

THIS WAS NOT DESIGNED AS A LICENSE

2. **Specialized skill.** Please describe whether installation of fire alarm systems by a contractor requires such a specialized skill that the public is not qualified to select a competent individual or entity for this purpose without assurances that minimum qualifications have been met.

KNOWLEDGE OF SYSTEMS OPERATION, TESTING,
INSTALLATION TO COMPLY WITH LIFE SAFETY
CODES.

3. **Public health, safety, or welfare.** Please describe:

- (a) The nature and extent of potential harm to the public, if any, if fire alarm contractors are not regulated; and

INSTALLATION AND TESTING OF LIFE SAFETY
SYSTEMS BELOW NFPA MINIMUM STANDARDS

- (b) The extent to which there is a threat to the public's health, safety or welfare (*Please provide evidence of the potential harm, including: a description of any complaints filed with state law enforcement authorities, courts, departmental agencies, other professional or occupational boards and professional and occupational associations that have been lodged against fire alarm contractors in this State within the past 5 years*).

MANY SYSTEMS NOT INSTALLED IN ACCORDANCE WITH NFPA CODES

4. **Voluntary and past regulatory efforts.** Please provide a description of the voluntary efforts made by fire alarm contractors to protect the public through self-regulation, private certifications, membership in professional or occupational associations or academic credentials and a statement of why these efforts are inadequate to protect the public.

ASSOCIATION HAS PROMOTED CERTIFICATIONS AND NICET QUALIFICATION STANDARDS

5. **Costs and benefits of regulation.** Please describe the extent to which regulation of fire alarm contractors will increase the cost of goods or services provided by fire alarm contractors and the overall cost-effectiveness and economic impact of the proposed regulation, including the indirect costs to consumers.

THE COST OF A STATE INSPECTION STICKER AND UL CERTIFICATION AT ± \$35.00/YEAR

6. **Service availability under regulation.** Please describe the extent to which regulation of fire alarm contractors would increase or decrease the availability of services to the public.

Would decrease as some providers may not opt for UK certification, costs / requirements

7. **Existing laws and regulations.** Please discuss the extent to which existing legal remedies are inadequate to prevent or redress the kinds of harm potentially resulting from non-regulation and whether regulation can be provided through an existing state agency or in conjunction with presently regulated practitioners.

SFMO CURRENTLY OVERSEE ENFORCEMENT OF NFPA CODES. BUT DOES NOT HAVE ANY AUTHORITY OVER ELECTRICAL CONTRACTORS OR ALARM INSTALLERS

8. **Method of regulation.** Please describe why registration, certification, license to use the title, license to practice or another type of regulation is being proposed, why that regulatory alternative was chosen and whether the proposed method of regulation is appropriate.

THIRD PARTY OVERSIGHT BY UK IS IN PLACE IN NUMEROUS JURISDICTIONS AND IS AN INDUSTRY STANDARD WHICH HAS BEEN USED ON THE SECURITY SYSTEM SIDE OF ALARMS FOR YEARS

9. **Other states.** Please provide a list of other states that regulate the fire alarm contractors as a profession, the type of regulation, copies of other states' laws and available evidence from those states of the effect of regulation on fire alarm contractors in terms of a before-and-after analysis.

I know of TEXAS, FLORIDA, MARYLAND

10. **Previous efforts to regulate.** Please provide the details of any previous efforts in this State to implement regulation of fire alarm contractors.

THIS BILL HAS BEEN PROPOSED IN PRIOR SESSIONS WAS TAKEN BACK AS MISINFORMATION ON THE REQUIREMENTS. THE MISINFORMATION WAS THAT THIS BILL WOULD BAR ELECTRICIANS FROM INSTALLING FIRE ALARM

To: Maine Fire Prevention Commission

March 19, 2002

My History

RE: LD1508

Alarm law is to improve public safety by regulating the alarm industry. One of the SFMO mandates is enforcement of numerous NFPA standards as adopted by the State of Maine. (NFPA 72 has been adopted but no review or enforcement is currently in place and no budget or manpower is projected)

This bill ran into difficulty getting it to the right committee changes in the wording etc. The hearing is set for November 30, 2005 with Criminal Justice committee and earlier concerns were brought by the electricians have hopefully been addressed but objections may come from Electricians Examining Board, some electricians and at least one core member of the MBFAA.

Lesson to be learned here.

This bill again came before criminal justice quickly and not enough time and effort in education was provided to concerned parties to allay fears and garner support for this legislation.

I had done much preliminary work with MBFAA to insuring that we had backing of the core members. We had agreement on the issues of training and certification by requiring alarm companies third party oversight to foster professionalism.

The law is written so as not to affect the current business practices of virtually all electricians. Electricians have been met with and now understand the law and are for the most part not opposed to this law

Several years ago I meet with the Electricians Examining Board to see if they felt the need to expand their regulation of Electricians to include enforcement NFPA 72. After a meeting with the Board, they stated, at that time, that they are only mandated and able to enforce Article 760 of NFPA 70 and had no desire to expand their role to cover other area of concern such as this or certification of data wiring.

Professionalism, training and certification are the big issues before this commission. All evaluations and recommendations of this committee are directly linked to a least one of these issues.

We need to do our homework. We have written and asked for support from major electrical contractors.

The Criminal Justice committee is an important hurdle to jump before we get to go before the entire legislature for a vote. Concerns brought before this committee can be difficult to overcome; we need to have committee allies on all of our recommendations and proposed bills.. Thank you for your support and assistance

Sincerely,
Harty

11. Minimal competence. Please describe whether the proposed requirements for regulation exceed the standards of minimal competence and what those standards are.

ULI STANDARDS - MEET NFPA CODE.
THE NFPA CODES HAVE BEEN ADOPTED
FOR MAINE

12. Financial analysis. Please describe the method proposed to finance the proposed regulation and financial data pertaining to whether the proposed regulation can be reasonably financed by current or proposed licensees through dedicated revenue mechanisms.

Lake Mary, FL 32795-1807**

**National Burglar & Fire Alarm Association 888-447-1689
2300 Valley View Lane, Suite 230
Irving, TX 75062**

- (c) An estimate of the number of potential licensees in each group.

There will not be any new licensing under this law.

2. **Specialized skill.** Please describe whether installation of fire alarm systems by a contractor requires such a specialized skill that the public is not qualified to select a competent individual or entity for this purpose without assurances that minimum qualifications have been met.

As will any type of specialized contractor, the public needs to do their homework about who they hire in order to be sure that the installation will be professional

3. **Public health, safety, or welfare.** Please describe:

- (a) The nature and extent of potential harm to the public, if any, if fire alarm contractors are not regulated; and

If a fire alarm system does not operate properly, then building occupants may not have sufficient time to exit the building before fire and smoke endanger their lives during the event of a fire.

- (b) The extent to which there is a threat to the public's health, safety or welfare (*Please provide evidence of the potential harm, including: a description of any complaints filed with state law enforcement authorities, courts, departmental agencies, other professional or occupational boards and professional and occupational associations that have been lodged against fire alarm contractors in this State within the past 5 years*).

We have heard of complaints of improper installations, and installations that cause false alarms, but have not received any formal written complaints.

4. **Voluntary and past regulatory efforts.** Please provide a description of the voluntary efforts made by fire alarm contractors to protect the public through self-regulation, private certifications, membership in professional or occupational associations or academic credentials and a statement of why these efforts are inadequate to protect the public.

Only a few have become "UL certified". Most of the larger contractor companies are members of the Maine Burglar & Fire Alarm Association. Electricians obtain "low-voltage wiring licenses". The vast majority of installers however are not members of an association and even more are not monitored by a third party such as Underwriters Laboratory.

5. **Costs and benefits of regulation.** Please describe the extent to which regulation of fire alarm contractors will increase the cost of goods or services provided by fire alarm contractors and the overall cost-effectiveness and economic impact of the proposed regulation, including the indirect costs to consumers.

Each installation would increase in cost by the cost of a sticker issued by our office, plus the cost of inspection by a third-party verifier. The sticker cost would be minimal, (approximately \$20).

6. **Service availability under regulation.** Please describe the extent to which regulation of fire alarm contractors would increase or decrease the availability of services to the public.

There would be no change in availability.

7. **Existing laws and regulations.** Please discuss the extent to which existing legal remedies are inadequate to prevent or redress the kinds of harm potentially resulting from non-regulation and whether regulation can be provided through an existing state agency or in conjunction with presently regulated practitioners.

There is presently no licensing of installers other than electrician's low voltage wiring licenses. There is presently also no third party verification of installation work.

8. **Method of regulation.** Please describe why registration, certification, license to use the title, license to practice or another type of regulation is being proposed, why that regulatory alternative was chosen and whether the proposed method of regulation is appropriate.

The sticker method of third party verification is chosen to keep things simple for all parties involved, and to avoid additional licensing which would be inappropriate seeing that electricians already have licensing oversight.

9. **Other states.** Please provide a list of other states that regulate the fire alarm contractors as a profession, the type of regulation, copies of other states' laws and available evidence from those states of the effect of regulation on fire alarm contractors in terms of a before-and-after analysis.

Delaware has a fire alarm law with several components, including a certificate of completion required by the State Fire Marshal's Office from the installing contractor. Details of the law are at www.delawarestatefiremarshal.com or 302-739-4394. There do not seem to be any before/after studies.

Oregon has a law regarding smoke detectors, but not fire alarm systems. ci.medford.or.us is the resource.

California has a fire alarm law, but its scope is limited to schools. osfm.fire.ca.gov is the resource.

10. **Previous efforts to regulate.** Please provide the details of any previous efforts in this State to implement regulation of fire alarm contractors.

There has been some discussion for nearly 10 years, with research on the constituent groups involved. Several different drafts on regulation have been previously considered based on feedback at the time.

Several fire alarm companies have come to our office repeatedly asking for a regulatory law for the fire alarm industry in Maine. They are impressed with how our office has successfully regulated the fire sprinkler industry for over 15 years and they would like to be held to a consistent standard as well.

11. Minimal competence. Please describe whether the proposed requirements for regulation exceed the standards of minimal competence and what those standards are.

The present standard is the National Fire Protection Association's Fire Alarm Code #72. The proposed mechanism for regulation merely establishes a procedure to verify that NFPA 72 is adhered to.

12. Financial analysis. Please describe the method proposed to finance the proposed regulation and financial data pertaining to whether the proposed regulation can be reasonably financed by current or proposed licensees through dedicated revenue mechanisms.

Money generated from the sale of stickers would help fund a new position. Initially the remainder of support would come from revenues generated by licenss & permit fees associated with existing regulation of the fire sprinkler industry. This position would share responsibilities with regulating both industries.

Date: July 12, 2006

To: Head, Anne L
Subject: Re: Invitation for Board to comment on legislative proposal (sunrise review)

Hi Anne:

This area is a battle ground between the Fire Protection Engineers who are licensed by our board and the NICET3 "certified" fire alarm and sprinkler system installers that are partially under the Electrician's Examining Board. As I understand the issue, the NICET3 people are doing design as well as installation. The design of sprinkler systems by NICET3 people has no regulation by a state board but their designs are being reviewed and approved by the Fire Marshal's Office. I understand that some municipal Code Enforcement Officers have issued building permits based on NICET3 designs. I have a written statement from the NICET certifying group stating that they never intended a NICET3 certified person to be designing systems without supervision from a licensed engineer.

This is clearly an area of building design with implications for public safety and the PE Board will provide some statement in this regard. The next PE Board meeting is September 28 but we will meet your September 30 deadline.

Please send a copy of the survey. I didn't receive the survey referenced in your e-mailed letter.

Ralph F. Sweet, PE, Chair
Maine Board of Licensure of Professional Engineers

In a message dated 8/30/2006 1:54:29 P.M. Eastern Standard Time, Anne.L.Head@maine.gov writes:

Ralph,

Could you review the attached letter and sunrise survey instrument and let me know if you think the Board of Licensure of Professional Engineers might be interested in submitting comments on a legislative proposal for the state to regulate alarm system contractors and installers? I don't have enough experience with your statute and rules to know whether the design and installation of fire alarm systems (as opposed to fire suppression systems) falls within the scope of practice of professional engineers.

Any comments on this proposal and/or responses to any of the survey questions I've included in this sunrise process would be greatly appreciated.

Thanks for your help,
Anne Head

Subject: Fire Alarm Contractor--LD1508

Hi Anne: The review of LD 1508 was on the PE Board's agenda but was inadvertently omitted. The review and comments below are mine and have not been reviewed by the Board.

Ralph F. Sweet, PE; Chair
Maine Board of Licensure of Professional Engineers

LD 1508

When I first heard about this bill in 2005, I was under the impression that it was intended to allow the licensure of a group of people who had no specific training except that they were listed by UL as an Alarm Service Company that could apply UL certificates to installed fire alarm systems. Originally, I was concerned that people who only knew how to install fire alarm systems did not have a broad enough understanding of building technology to protect public safety in general. I didn't follow the proposed bill because I felt it was another example of the trend to allow persons with limited training to be licensed for some very focused purpose.

I am very concerned now that I review LD 1508 in as it was accepted by the legislature in March 2006. After careful reading of this bill, it appears to me that the persons pushing for LD1508 have set themselves up as the ONLY persons the can design, install, test, and maintain fire alarm systems. LD 1508 curtails and prevents the long-standing activities of existing licensed or authorized persons in the construction industry (Professional Engineers, Fire Protection Engineers, Building Commissioners, Master Electricians, Code Enforcement Officers, and Electrical Inspectors) that have been designing, installing, testing, maintaining and inspecting fire alarms systems.

In addition to my concerns stated above, I believe that LD 1508 needs an in depth review by representatives of the construction industry that are knowledgeable in the at least the following aspects of this bill described below:

1. UL does not certify the detailed qualifications of an Alarm Service Company in the manner implied in Paragraph 1. "Certificate" and Paragraph 5. "Fire alarm system contractor" under Definitions. UL lists an Alarm Service Company as being able to apply a UL certificate to a fire alarm system after UL reviews up to four of the company's installations.
2. Paragraph 6. "Inspect" under Definitions needs to be tightened up to require the inspector to verify by testing that the fire alarm system is code conforming and works. Allowing the inspector to verify that the fire alarm system "appears" to work after "visual examine or

test” is not meaningful.

3. Paragraph 9. “License” under Definitions need to be clarified. What does it mean to be “engaged in the fire alarm system business”?
4. Paragraph 4. “Inspection sticker” under Applicability is an excellent idea. However, if a meaningful inspection, refer to my paragraph 2, is conducted prior to each annually issued sticker, I suspect that there will not be enough licensed contractors to do the work. Almost every building in the state, except single and two family residences, has some level of fire alarm system installed.
5. The last sentence of the second un-numbered paragraph under Section 1395, “Plan Review” needs to be clarified and tightened up. The last sentence implies that the Commissioner is relying on the UL Certificate issued by the contractor to mean that a particular system that the contractor installed is in accordance with his drawings and specifications. There needs to be an impartial, third party inspection of the installed system that results in a certificate from an independent inspector verifying that the fire alarm system installation is code conforming and works.

Ralph

APPENDIX C

Title 32, Chapter 17, ELECTRICIANS

Subchapter 3: LICENSES

§1201. License required

No electrical installations may be made unless by an electrician or other person licensed by the board except as provided in this chapter. No person may perform any electrical installations on behalf of an electrical company unless licensed as provided in this chapter. [1995, c. 325, §11 (amd).]

PL 1973, Ch. 363, § (RPR).

PL 1987, Ch. 735, §53 (RPR).

PL 1995, Ch. 325, §11 (AMD).

§1202. Issuance of licenses

1. Application; qualifications. The board shall issue a license to any person who files a sworn application, who passes an examination conducted by the board as provided in section 1203 to determine his fitness to receive that license and who meets the following qualifications.

A. For a journeyman electrician's license, a person must:

- (1) Complete at least 8,000 hours of service as an apprentice or helper electrician or at least 8,000 hours of experience in electrical installations, as defined in section 1101, and satisfactorily complete a program of study comprising 576 hours as approved by the Electricians' Examining Board or from an accredited institution. The 576 hours shall consist of 225 hours of required study, including an approved course of not less than 45 hours in the current National Electrical Code; and 351 hours of elective study, comprised of all trade-related electives or 225 hours of trade-related courses and 135 hours of degree-related courses;
- (2) Be a graduate of an accredited regional applied technology high school 2-year electrical program, have worked for 8,000 hours in the field of electrical installations under the supervision of a master electrician or the equivalent and have completed a course of not less than 45 hours in the current National Electrical Code, the course to be approved by the board;
- (3) Be a graduate of an accredited Maine community college electrical program or a vocational-electrical program of the Department of Corrections, have worked for 4,000 hours in the field of electrical installations under the supervision of a master electrician or the equivalent and have completed a course of not less than 45 hours in the current National Electrical Code, the course to be approved by the board. Persons qualifying under this paragraph may write the journeyman's examination upon graduation if application is made within one year of graduation; or
- (4) Be an electrical apprentice registered with the State Apprenticeship and Training Council and have completed 576 hours of related instruction, as defined in this paragraph, prescribed in their apprenticeship program, the 8,000-hour approved program and a course of not less than 45 hours in the current National Electrical Code, the course to be approved by the board. Persons qualifying under this paragraph may write the journeyman's examination after completion of the 576 hours of instruction, if application is made within one year of the completion of the instruction.

[1993, c. 349, §67 (amd); 2003, c. 20, Pt. 00, §2 (amd); §4 (aff).]

B. For a master electrician's license, a person must:

- (1) Complete at least 4,000 hours of service as a journeyman electrician or at least 12,000 hours of experience in electrical installations, as defined in section 1101, and complete a program of study comprising 576 hours as approved by the Electricians' Examining Board or from an accredited institution. The 576 hours shall consist of 450 hours of required study, including a course of not less than 45 hours in an approved course in the current National Electrical Code and 126 hours of degree-related courses;

Any person who holds a journeyman electrician's or limited license under this section or under former section 1202, subsection 1, prior to July 1987, shall be eligible to take the examination for a master electrician's license, provided that the applicant has completed the number of hours of service or experience required by this subsection and has completed 45 hours of current National Electrical Code.

[1987, c. 735, §54 (amd).]

C. For a limited electrician's license, a person must meet the following requirements.

- (1) A limited electrician in water pumps must have 135 hours of electrical education as approved by the Electricians' Examining Board or from an accredited institution and 2,000 hours of experience. The privileges of practice are restricted to electrical work between the branch circuits and power supplies.
- (2) A limited electrician in outdoor signs, including sign lighting, must have 135 hours of electrical education as approved by

Title 32, Chapter 17, ELECTRICIANS

the Electricians' Examining Board or from an accredited institution and 2,000 hours of experience. The privileges of practice do not include branch circuit wiring.

(3) A limited electrician in gasoline dispensing must have 135 hours of electrical education as approved by the Electricians' Examining Board or from an accredited institution and 2,000 hours of experience. The privileges of practice are restricted to electrical work between the branch circuit and the power supply.

(4) A limited electrician in traffic signals, including outdoor lighting of traffic signals, must have 135 hours of electrical education as approved by the Electricians' Examining Board or from an accredited institution and 2,000 hours of experience.

(5) A limited electrician in house wiring must have 225 hours of electrical education as approved by the Electricians' Examining Board or from an accredited institution and 4,000 hours of experience. Privileges of practice are restricted to one-family and 2-family dwellings, including modular and mobile homes. Any person having a limited license in mobile homes prior to the effective date of this section is automatically licensed as a limited electrician in house wiring.

(6) A limited electrician in refrigeration must have 270 hours of electrical education as approved by the Electricians' Examining Board or from an accredited institution and 6,000 hours of experience. Graduates of a Maine community college electrical program in refrigeration approved by the Electricians' Examining Board or from an accredited institution are credited with 4,000 hours of experience upon graduation. Privileges of practice are restricted to all associated wire from the loadside of distribution.

(7) A limited electrician in low energy, including fire alarms, must have 270 hours of electrical education as approved by the Electricians' Examining Board or from an accredited institution and 4,000 hours of experience. Any person having a limited license in fire alarms or experience in the installation of low-energy electronics, as defined by the National Electrical Code, prior to the effective date of this section, qualifies to be licensed as a limited electrician in low energy.

(8) A crane technician must have 135 hours of electrical education as approved by the Electricians' Examining Board or from an accredited institution and 2,000 hours of experience. Any person having work experience in the installation of cranes and hoists, as defined by the National Electrical Code, prior to the effective date of this subparagraph, qualifies to be licensed as a crane technician. This covers the installation of electrical equipment and wiring used in connection with cranes, monorail hoists, hoists and runways.

[1999, c. 386, Pt. F, §14 (amd); 2003, c. 20, Pt. OO, §2 (amd); §4 (aff).]

D. For a journeyman-in-training electrician's license, a person must be a graduate of an accredited Maine community college or Department of Corrections electrical program, receive a passing grade on the journeyman examination and complete 2,000 hours of experience. [1995, c. 325, §13 (amd); 2003, c. 20, Pt. OO, §2 (amd); §4 (aff).]

The board may establish by rule standards in accordance with the Maine Administrative Procedure Act, Title 5, chapter 375, to exercise its discretion to determine if a limited license holder applying for a master electrician's license has adequate experience in all phases of electrical installation to take the examination.

[1999, c. 386, Pt. F, §14 (amd); 2003, c. 20, Pt. OO, §2 (amd); §4 (aff).]

2. Apprentice or helper. The board may issue a license upon payment of an annual fee as adopted by the board to any person who applies for a license, without examination. Any such person employed by an electrician as an apprentice for the purpose of qualifying for any license mentioned in section 1203, or as an electrician's helper, must apply for a license as such immediately after commencing that employment or immediately after starting school in an electrical course.

[1999, c. 386, Pt. F, §15 (amd).]

3. Certificate. All persons licensed by the board shall receive a certificate which must be publicly displayed at the principal place of business of the electrician or, if no such place of business, must be carried on the person and displayed at any time upon request, as long as that person continues in the business as defined.

[1983, c. 553, §28 (amd).]

4. Inactive licenses. A licensee who does not desire to perform any of the electrical installations described in section 1101 and who wants to preserve the license while not engaged in any electrical installations shall surrender the license to the board for placement on inactive status. The board shall place the license on inactive status upon proper application by the licensee. The fee for inactive status may not exceed \$80 per renewal. During inactive status the licensee is required to renew the license biennially, but is not required to meet the education provisions under the rules of the board.

A licensee surrendering a license pursuant to this section may have the license reinstated to active status by demonstrating compliance within the previous biennium with section 1204 and proper application for an active license. Any license placed on inactive status after the effective date of this subsection and remaining inactive for 3 or more years may be reactivated by the applicant being required to

Title 32, Chapter 17, ELECTRICIANS

successfully pass a license examination at the discretion of the board.

[1995, c. 325, §14 (amd).]

5. Electrical company. The board shall issue a license to operate an electrical company to a person who files an application validated by a master or limited electrician licensee.

PL 1999, Ch. 386, §F16 (RPR).

§1203-A. Fees

The Director of the Office of Licensing and Registration within the Department of Professional and Financial Regulation may establish by rule fees for application, examination, licensure, renewal and other purposes authorized under this chapter in amounts that are reasonable and necessary for their respective purposes, except that the fee for any one purpose other than permit and inspection fees may not exceed \$150 biennially. Rules adopted pursuant to the section are routine technical rules pursuant to Title 5, chapter 375, subchapter II-A. [2001, c. 323, §18 (amd).]

1. Application fee.

[2001, c. 323, §18 (rp).]

2. Examination fee.

[2001, c. 323, §18 (rp).]

3. Licensure fee.

[2001, c. 323, §18 (rp).]

PL 1999, Ch. 386, §F17 (NEW).
PL 2001, Ch. 323, §18 (AMD).

§1204. Renewals

All licenses may be renewed for 2-year periods without further examination, upon the payment of the proper renewal fee and documentation of continuing education as established by rule as the board determines necessary. The expiration dates for licenses issued under this chapter may be established at such other times as the Commissioner of Professional and Financial Regulation may designate. The board shall notify everyone registered under this chapter of the date of expiration of the license and the fee required for its renewal for a 2-year period. The notice must be mailed to the person's last known address at least 30 days in advance of the expiration date of the license. [1995, c. 325, §17 (amd).]

A license may be renewed up to 90 days after the date of its expiration upon payment of a late fee of \$10 in addition to the renewal fee. Any person who submits an application for renewal more than 90 days after the license expiration date shall be subject to all requirements governing new applicants under this chapter, except that the board may in its discretion, giving due consideration to the protection of the public, waive examination or other requirements. The board may levy penalties for nonrenewal. Notwithstanding any other provision of this chapter, the board shall waive examination if a renewal application is made within 90 days after separation from the United States Armed Forces, under conditions other than dishonorable, by a person who has failed to renew his license because he was on active duty in the Armed Forces; provided that the waiver of examination shall not be granted if the person served more than 4 years in the Armed Forces, except if he is required by some mandatory provision to serve a longer period and he shall submit satisfactory evidence of this mandatory provision to the board. [1987, c. 735, §57 (amd).]

Any master electrician giving up his master's license for a lower grade license shall be required to successfully pass an examination in order to reinstate his master license. [1983, c. 413, §39 (new).]

Title 32, Chapter 17, ELECTRICIANS

PL 1995, Ch. 325, §17 (AMD).

§1205. Corporations and partnerships (REPEALED)

PL 1973, Ch. 363, § (RP).

§1206. Reciprocity

The board shall issue a license to any person who files a sworn application, who is licensed under the laws of another state or territory of the United States and who has been licensed and actively engaged in an electrician's work for a minimum of 6 years, as long as that state or territory has licensing standards and experience requirements at least equivalent to this State's and as long as that state or territory grants similar privileges to persons licensed under this chapter. Reciprocal licenses may not be denied on the basis of current residency. [1993, c. 636, §2 (new).]

Notwithstanding other provisions of this section, the board, upon receiving an application for a reciprocal license, may waive the 576 hours of study required for a journeyman or master license pursuant to section 1202. The board may require the applicant to submit such written evidence, verified by oath, as it determines necessary to support the application. [1993, c. 636, §2 (new).]

PL 1993, Ch. 636, §2 (NEW).

Arizona**Arizona Registrar for Contractors**

800 West Washington

6th floor

Phoenix, AZ 85007-2940

(602) 542-1525

<http://www.rc.state.az.us/>

License Types:**Specialty Residential Contracting:**

- **C-12: Low Voltage Communication Systems:** Installation and repair of low voltage alarm, intercom, telephone, call, clock and television systems, including towers and antennas.
- **C-16: Fire protection Systems:** Installation and repair of fire prevention and protection systems including all low voltage signaling systems.

Specialty Dual License Contracting:

- **K-16: Fire protection Systems:** This classification allows the scope or work permitted by the commercial L-16 Fire Protection Systems and the residential C-16 Fire Protection Licenses.
- **K-67: Low Voltage Communications Systems:** This classification allows the scope of work permitted by the commercial L-67 Low Voltage Communications Systems, and the residential C-12 Low Voltage Communications Systems Licenses.

Specialty Commercial Contracting:

- **L-67: Low Voltage Communication Systems:** Installation, service, repair, and maintenance of systems and devices of low voltage, including public address; intercommunication systems; telephone switchboards; call systems; master and program clocks (Low voltage wiring and needed equipment only.)

For a complete list of Contractor's License Classifications, visit: http://www.rc.state.az.us/l_class.html

Application Process:

For a list of the steps involved in applying for a license, and to download an application, visit the following link: http://www.rc.state.az.us/l_app.html

[Back to Top](#)

Arkansas

The State of Arkansas requires special licensing for security alarm system installation/monitoring.

Arkansas State Police Headquarters
 1 State Police Plaza Drive
 Little Rock, AR 72209
<http://www.asp.state.ar.us/pl/pl.html>

For licensing information with the Arkansas State Police, telephone the Regulatory Services office at (501) 618-8600

[Back to Top](#)

California

The State of California requires special licensing for Low Voltage Electrical Contractors, and for the installation and maintenance of burglar alarms.

California State Licensing Board
For Low Voltage and General Electrical Contractors
 9821 Business Park Drive
 Sacramento, CA 95826-0026
<http://www.cslb.ca.gov>

License Types: Low Voltage Systems Contractor

Application Process:

Download an application packet at <http://www.cslb.ca.gov/services/forms.asp> by clicking on the PDF for "Application for Contractor's License." Here, applicants can find information and download an application to gain a **C-7 License: Low Voltage Systems Contractor**: This contractor installs, services and maintains all types of communication and low voltage systems which are energy limited and do not exceed 91 volts. These systems include, telephone systems, sound systems, cable television systems, closed-circuit video systems, satellite dish antennas, instrumentation and temperature controls, and low voltage landscape lighting. Low voltage fire alarm systems are specifically not included in this section.

Fees: Low Voltage/Electric Contractor Single classification: \$250

Bureau of Security and Investigative Services (BSIS)
 For Burglar Alarm installation, service, etc.
 401 S Street, Suite 101
 Sacramento, CA 95814
 Phone: (916) 322-4000
 Fax: (916) 323-1182
<http://www.dca.ca.gov/bsis/bsisarlm.htm>

License types required for Burglar alarm work:

- **Alarm Company Operator License:** Needed for a business that sells, installs, monitors, maintains, services or responds to alarm systems. In order for a company to seek this license, there must be a Qualified Manager on staff.
- **Qualified Manager:** An individual who will manage the business on a day-to-day basis. Must have passed the licensing examination.
- **Alarm Agent (registration):** Employed by an alarm company operator to sell, install, monitor, maintain, service of respond to alarm systems or to supervise such actions.

Application Process:

Applications for registration as an alarm agent are available from alarm company operators. To request an application for licensure as an Alarm Company operator or Qualified Manager, call (916) 322-4000 or (800) 952-5210, or visit the BSIS web site at <http://www.dca.ca.gov/bsis>.

Application Fees:

Alarm Company Operator: \$35
 Qualified Manager: \$105
 Alarm Agent: \$17 Registration fee

Division of Occupational and Professional Licensing

State Board of Master Electricians

500 North Calvert St., Room 302

Baltimore, MD 21202

Phone: (410) 230-6163

Fax: (410) 333-6314

<http://www.dllr.state.md.us>

The State Board of Master Electricians issues only one license: Master Electrician. In Maryland the actual performance licenses to perform electrical work is issued by each of the local jurisdictions. Many of the local jurisdictions do issue additional categories of electrical licenses. All of these licenses are "lesser" than a Master Electrician. For example, some local jurisdictions may issue a "limited

electrician," or "low voltage" license. Individuals interested in obtaining a lesser license must contact the local jurisdiction where he or she intends to be doing that kind of work. Not all jurisdictions offer a lesser license. In the jurisdictions that do not offer a lesser license, an individual would need to hold a master electrician's license to perform any kind of electrical work.

Contact the Division of Occupational and Professional Licensing if you have any questions.

Department of Professional and Occupational Regulation

Board for Contractors, Tradesmen
3600 West Broad Street
Richmond, VA 23230
Phone: (804) 367-8500
Fax: (804) 367-2475
E-mail: dpor@dpor.virginia.gov

<http://www.dpor.virginia.gov>

License Types: "Electrical Contractors" in the State of Virginia means those individuals whose contracts include the construction, repair, maintenance, alteration or removal of electrical systems under the National Electrical Code. This classification provides for all work covered by the National Electrical Code including electrical work covered by the **alarm/security systems contracting, electronic/communication service contracting and fire alarm systems contracting specialties.** A firm holding an electrical license is responsible for meeting all applicable tradesman licensing standards.

- Journeyman
- Master

Application Process: Download all applications and necessary forms at this site:
http://www.state.va.us/dpor/tra_form.htm

Fees: Contact the Board for Contractors/Tradesmen for fee information.
