In 2010, 46 school units consolidated into 7 new school units.

Some information in this report is derived by aggregating or estimating from the pre-2010 unit data. Please see Data Calculation notes for more detail.

## **Data Calculation Notes**

School units consolidated both during 2009 and during 2010. The various reports available from the Department of Education may contain 2010 units, 2009 units, or even 2008 units, depending on the lead time necessary to collect the information and prepare the report. In order to provide data for the current school units in this report, some information was calculated from the data for previous school units. The 2009/2010 units are listed in the Unit Comparison table. The calculations themselves are detailed below.

### **Per Pupil Cost Calculation.**

Using the data from the “2008-2009 Per Pupil Subsidizable Operating Expenditures by School Administrative Unit” (MDOE), the net operating costs and the fiscal year subsidizable pupils were summed for each of the previous units that were contained within each new unit. The sum of the net operating costs was divided by the sum of the fiscal year subsidizable pupils to estimate the current per pupil operating costs. These values are likely to be overestimates, since school unit consolidation will probably reduce net operating costs compared to the previous units’ expenditures.

The state report contained 2008 school units, so 32 school units were affected by these calculations.

### **Per Pupil Cost Rank.**

The per pupil cost ranking was determined by dropping the previous units from the “2008-2009 Per Pupil Subsidizable Operating Expenditures by School Administrative Unit,” and inserting the calculated values for the new units (see Per Pupil Cost Calculation), and then ordering the units by per pupil cost from high to low.

### **State Valuation and Percentage Change Calculation.**

Using data from the “Comparison of State Valuations and Pupils from FY 2009-10 vs FY 2010-11” (MDOE), the 2008 and 2009 State Valuations and the 2008 and 2009 Calendar Year Average Pupils were summed for each of the previous units that were contained within each new unit. These sums are used as estimates for the 2008 and 2009 State Valuations for this report. The percentage change was calculated as the difference between the 2008 and 2009 calculated valuations, divided by the 2008 calculated valuation.

The state report contained 2009 school units, therefore 7 school units were affected by these calculations.

### **State Per Pupil Valuation and Percentage Change Calculation.**

The sum of the state valuations was divided by the sum of the average pupils to derive the estimated Per Pupil Valuations for each year. The percentage change was calculated as the difference between the 2008 and 2009 calculated per pupil valuations, divided by the 2008 calculated per pupil valuation.

The state report contained 2009 school units, therefore 7 school units were affected by these calculations.

### **Resident Enrollment.**

The data from “Public School Resident Enrollment, October 1<sup>st</sup> Counts (2009-2010)” was used to estimate the resident enrollment for the new units. The total resident enrollments for each town within a unit were summed for each of the previous units that were contained within each new unit. This value was used as an estimate for the resident enrollment. These values are likely to underestimate the true resident enrollment, as students who were not classified as residents prior to the consolidation may be classified as residents post-consolidation.

The state report contained some 2008 units and some 2009 units. In all, 12 school units were affected by these calculations.

**Special Education Enrollment.**

Special Education Enrollment was calculated by summing the special education enrollment for each of the previous units that were contained within each new unit.

The state report contained 2009 school units, therefore 7 school units were affected by these calculations.

**Special Education Prevalence Rate.**

The Special Education Prevalence Rate was calculated by dividing the special education enrollment by the resident enrollment. This rate is an estimate for the 12 school units that had calculated Resident Enrollments and/or Special Education Enrollments.

**Average Teacher Salaries.**

The salaries for each professional position were summed and divided by the count of professional employees for each of the previous units that were contained within each new unit to estimate the Average Teacher Salary.

The state report contained some 2008 units and some 2009 units. In all, 10 school units were affected by these calculations.

**Adjusted State Allocation and Percentage.**

Using the data from “Subsidy Allocations by School Administrative Unit 2010-2011 Preliminary” report (MDOE), the Total Allocation and the Adjusted State Allocation were summed for each of the previous units that were contained within each new unit. The summed Adjusted State Allocation was used to estimate the corresponding value for this report. The Adjusted State Allocation Percentage was calculated by dividing the Total Allocation by the Adjusted State Allocation for these estimates.

The state report contained some 2009 school units, therefore 6 school units were affected by these calculations.
