.

FOREWORD

The original intent of establishing the Commission to Assess the Impact of Increased State Spending on the University of Maine System was to look at how effectively the University was utilizing the recent increases in the level of state funding. However, since the inception of the Commission, the emphasis soon focused on the 1990-1991 biennium reductions in the increases in state support to the University. The focus of testimony and the conclusions of the analysis of this report highlight the effect of these reductions.

The Commission became particularly disturbed by recent budget developments. The original \$9.6 million appropriation reduction of the 1990-1991 biennium was a major setback for the University of Maine System, which seriously affected morale within the System. the University is expected to meet the 15% reductions in its third and fourth quarter allotments for Fiscal Year 1991 as proposed by 30, Governor at the November 1990 news conference, the University of Maine System will be forced to further reduce its budget for the remainder of Fiscal Year 1991 by \$11,132,425 beyond the \$9.6 million deappropriation. In addition, new target levels for the 1992-1993 biennium result in further cuts from the levels currently appropriated for Fiscal Year 1991.

In 1977, the University's appropriation was reduced by \$2.8 million or 7.6%. This reduction had a dramatic impact on the University's quality and employee morale for the next decade. The currently proposed reductions are actual reductions, rather than reductions in increases. The proposed targets will reduce the University's appropriation by \$2.5 million or 1.8% from the 1990 appropriation. However, this reduction, unlike 1977, would be imposed in the middle of an operational year which effectively doubles the impact. An additional \$1.6 million or 1.2% reduction from 1991 targets is being proposed for 1992 funding.

When compared to the original appropriation to the University of Maine System for 1991 of the First Regular Session of the 114th Legislature, these reductions are even more dramatic. The 1991 target represents a \$17.7 million or 11.4% reduction from the original 1991 appropriation. The 1992 target is a \$19.3 million or 12.5% reduction from the original 1991 appropriation. Even the target for 1993 is \$10.8 million below the original 1991 appropriation.

The Commission hopes that the Governor and the Legislature have gained an historical perspective on the impact of the budget cuts on the University in the late 70's and avoid future financial errors. A University of Maine System adequately funded is an important investment in the future of Maine.

EXECUTIVE SUMMARY

GENERAL FINANCIAL HEALTH

The Commission conducted a standardized analysis of a set of ratios specifically developed for higher education institutions to assess the credit worthiness, asset allocation, and general financial health. This analysis indicated that the University of Maine System has maintained a record of good overall financial standing through 1990. However, this analysis only begins to demonstrate the effect of the 1990-1991 biennium reductions in the General Fund appropriations to the University of Maine System. The Commission noted with concern what appears to be a general decline in many of these ratios from recent peaks in either 1987 or 1988. The greatest impact of the reductions will occur in 1991 which could not be included in this analysis. Therefore, it is likely that these downward trends will be exacerbated for 1991.

This analysis also provided an overall picture of the trends in University funding sources and uses. One of the most prominent trends has been the decline in Federal Revenue; its share has been reduced by nearly one-half since 1980. State support has had to make up the greatest part of this reduction in federal support. Although tuition and fees have generally been declining as a share of the total, the reductions in the state's General Fund appropriations to the University will reverse this trend and again place a greater burden on students. In addition, the decline in federal revenue has had its greatest impact on Student Aid.

AGGREGATE LEVEL OF STATE FUNDING

The late 1970's had a significant impact on the level of state funding of the University of Maine System. The negative real growth during this period combined with other factors, such as the increase in state support of local education, and decreased the University's share of both General Fund revenue and total education expenditures.

Overall, State support to the University has improved during the 80's. The \$15 million down payment recommended by the Visiting Committee to the University of Maine provided much needed catch-up funding and a tremendous boost to employee morale and program quality.

While the University still received a 6% annual increase in 1990-1991 appropriations following the reductions, its increases lagged behind the growth in appropriations for the Department of Educational and Cultural Services, the Maine Technical College System, and the Maine Maritime Academy. The University's appropriation increases even lagged behind the growth in total General Fund appropriations during the 1990-1991 biennium.

CAMPUS AND MISSION ALLOCATIONS

The University of Maine System budget allocation process is affected by a number of different factors, including individual campus decisions, which make it difficult to draw conclusions about the funding policy of the Board of Trustees. Legislative initiatives have also affected this allocation process. In many instances, the distribution of the University's Educational & General appropriation is based on a formula for equity purposes. This was the case for the allocation of the 1990-1991 reductions, which were distributed based on each campus' share of the 1989 total Educational and General budget.

Since 1986, the budget and the General Fund appropriations to each of the campuses have grown and, with the exception of the 1990-1991 biennium, they have grown in real terms. However, the 1990-1991 reductions, with few exceptions, represent a real decline in the level of state support for each of the campuses. The two most notable exceptions are the University of Maine at Augusta and the University of Southern Maine. These campuses received funding increases for two of the most recent new initiatives of the System, the Community College of Maine and the Lewiston-Auburn College, respectively.

In reviewing programs and capabilities of the campuses of the University, it became clear that one of the University's strengths is its diversity among campuses. Students benefit from this in terms of academic offerings and scope of educational setting. The State benefits by having such diversity for its citizens without unnecessary duplication.

The Commission encourages the University System, in accordance with the Visiting Committee Report, to continue to refine campus missions in order that campuses serve various geographical areas as well as a diversity of students and constituencies. University of Maine should develop graduate and research programs in those areas where that campus can compete nationally, while maintaining strong undergraduate programs in all of its colleges. University of Southern Maine should continue evolve as a Comprehensive Urban University with limited graduate programs. The University of Maine at Farmington, University of Maine at Fort Kent, University of Maine at Machias, and University of Presque Isle should continue at developed as baccalaureate granting institutions. Additionally, the University of Maine System should develop a community college component, a task which has been delegated to the University of Maine at The Commission encourages each campus to fulfill its unique mission with excellence in mind.

ACTIVITY AND EXPENDITURE ALLOCATIONS

The analysis by the Commission of the expenditure and activity allocations of the individual campuses highlighted that the University of Maine System was forced to cut back in many of the same activities and expenditures during the 1990-1991 biennium that received additional attention as part of the \$15 million down payment in 1987. In particular, travel and equipment received the largest increases during 1987, but have also been targeted for the largest reductions during the 1990-1991 biennium.

HUMAN RESOURCES

The largest portion of the appropriation increases of the 1988-1989 biennium went into badly needed salary increases. Since a university system is only as good as its people, this was an appropriate first priority. University of Maine System faculty salaries have improved dramatically in recent years. In Fiscal Year 1981, University of Maine faculty salaries were ranked 49th in the nation when compared to faculty salaries paid at the major public university in each of the 50 states. That ranking has improved to 31st in Fiscal Year 1990. Salaries for faculty and staff, while still below national averages, are at least competitive. Also included in the increases was the implementation of the revised job classification system which positively impacted employee morale. Consequently, the System has been better able to attract and retain highly qualified and talented faculty and staff.

The \$15 million down payment was used to supplement a number of areas other than compensation such as out-of-state travel and equipment purchases. However, these expenditures also contributed to improved faculty morale through expanded faculty development programs and improved working environments. At a number of the campuses full-time faculty were added which further improved faculty working conditions and student/faculty ratios.

The Commission was presented with testimony and evidence that these improvements in morale have been seriously affected by the recent budget reductions. The budget reductions, as noted previously, hit hardest in travel budgets and equipment purchases, directly affecting faculty development programs and improvements in faculty equipment.

The Commission urges the University to maintain faculty salaries at nationally competitive levels.

Compensation represents more than 75% of total Educational and General expenditures, and is closer to 80% at some of the campuses. Given this sizable share of compensation related expenses, budget reduction proposals necessitated that some of the reductions be realized through lay-offs. Despite an early retirement incentive the University was forced lay-off 160 program, to full-time These lay-offs were implemented according to equivalent positions. collective bargaining agreements. However, the Commission did hear testimony that some of the problems in the lay-off process resulted from a less than complete knowledge of the contracts by administrators.

The Commission recommends that administrators within the University System become familiar with the collective bargaining contract provisions, particularly as they apply to policies regarding notification of lay-offs.

STUDENTS AND STUDENT COSTS

Tuition and the University's Educational and General appropriations have grown at varying rates since the 1968 merger, but in the last two years tuition has been growing faster than the state appropriation. The current total annual cost of an education for all in-state on-campus undergraduate student is \$15,730 per student of which the student and family pay \$8,149 or 51.8%. This cost has increased from the 1986 level of \$10,192 for total cost per student with the student and family paying \$6,083 or 59.7% (just prior to the \$15 million down payment).

Federal support for student financial aid has remained virtually steady from Fiscal Year 1985 to 1989, while University support for the same period has grown at an average annual rate of 9.5%. This is due to the priority that the Trustees place on providing financial resources for needy students, especially in times when tuition is increasing at a faster rate than inflation. Despite increases in support from University sources and the State, student aid as a share of the Educational and General budget has been steadily declining. The Commission was also concerned with the make-up of the financial aid to students which demonstrated an increase in the reliance on loans versus scholarships and grants.

The decline in financial aid, increasing tuition rates in excess of inflation, and a heavier reliance on loans within student financial aid packages place a greater burden for meeting education costs on the student and family. The end result is that fewer students will be financially capable of attending the University.

The Commission supports and commends the Trustees for providing increased financial aid to needy Maine students during periods of increased tuition costs.

FACILITIES, MAINTENANCE, AND BORROWING

The increase in state funding has been used to leverage increases in private support. The Pride and Promise Campaign, a private fund raising program intended to supplement recent bond issues is possible in large measure because the public perceives the University of Maine System as a quality system worth supporting.

While the Capital Campaign is a much needed and justified capital program, the Commission urges the University to incorporate capital renewal and modernization of existing buildings as a priority and alternative in its capital planning.

University is able to fund only about one-half maintenance expenditure level as recommended by the Joint Standing Committee on Audit and Program Review. The March 1988 Audit and Program Review report recommended budgeting maintenance at 1.5% of estimated building value. The lack of adequate funding for maintenance results in the harmful and more expensive practice of This practice results in additional future deferred maintenance. costs when relatively simple maintenance projects become major ones due to delaying early corrective action. It also places students, faculty, and employees at risk if safety related projects To address this issue, the Trustees have requested increased Part II appropriation support of \$1.0 million in Fiscal Year 1992 and an additional \$1.5 million in Fiscal Year 1993 to substantially address ongoing maintenance.

The Commission supports the Trustees supplemental request and encourages the University to continue to increase maintenance budgets until they reach the 1.5% goal and address deferred maintenance issues as funding becomes available.

AUXILIARY ENTERPRISES, RESEARCH AND OTHER FUNDING

The University of Maine has had a weak track record of research funding when compared to attracting other land-grant England. institutions in New Research benefits not only the University system through increased funding and prestige, but it also benefits the general public through studies of environmental problems, agriculture, forestry, fishing, and other areas requiring attention as a result of federal mandates. However, the University of Maine is trying harder to increase external support of research as evidenced in its increased submission of proposals, increased faculty involvement and increased awards. From Fiscal Year 1989 to Fiscal Year 1990 there were increases of 23% in proposals submitted. 14% more faculty involved, 29% more dollars requested, 30% more awards approved and 21% more funds received.

The Commission applauds the University of Maine for the growth in the research area during the past two years and encourages it to continue with this progress.

The Commission had a limited amount of time to review a number of other complex and sometimes controversial funding issues such as athletics, auxiliary enterprises, endowments and discretionary accounts. Although the state may have no statutory control over the use of many of these funds and accounts, the Governor, Legislators, and the general public are logically concerned with the proper use of all University of Maine System funds given the size of the state's financial commitment to the University.

The Commission urges the University of Maine System to be aware of this public scrutiny of all university funds and to avoid expenditures which might be perceived as improper. This will be particularly important in the trying financial times to come. Academics should be given highest priority in the use of any funding.

The University should also continually evaluate the efficiency and the charges of the self-supporting, auxiliary enterprises to insure the efficient use of student dollars. If auxiliary enterprises can not be self-supporting, contracting with private firms should be considered.

Given past criticisms of the financial commitment to athletics at the University of Maine and the current budgetary problems, it might be prudent to scale down the level of competition and cost. Thus, the Commission recommends that the President of the University of Maine seek to negotiate with the Presidents of the other comparable Universities in New England and the Middle Atlantic States to form a new Yankee Conference in which athletic scholarships, coaching, staffs and other costs be limited.

PENDING FUNDING PROPOSALS

Recognizing the current economic conditions, the University understandably shared in the belt-tightening that was necessary. However, it is important that the progress made in recent years not be lost. The deappropriation of the current biennium and proposed future reductions threaten the progress that has been made in creating a public university system to serve the people of Maine as we move into the twenty-first century.

The Commission recommends that the University of Maine System receive a high priority in any budget deliberations. If additional reductions become necessary due to State economic conditions, it is the opinion of the Commission that the number of programs and/or access to those programs will have to be reduced or eliminated to preserve the quality of remaining mission-related programs.

TOPICS FOR FURTHER REVIEW

The charge to the Commission was intentionally broad, consequently there were a number of topics which the Commission did not consider but are nevertheless worthy of further review.

The Commission recommends that the Joint Standing Committee on Education consider the following and make recommendations, where appropriate, to the Board of Trustees, Chancellor and full legislature.

- Honors Programs
- Academics vs. Public Service
- Admission Standards
- Preparation of Underprepared Students
- Academic Excellence
- Cost of Graduate Programs

I. INTRODUCTION

This chapter is intended to provide a summary of the Commission's purpose and organization. It also provides a brief overview of the University of Maine System as a foundation for understanding the more detailed chapters which follow.

Commission Background

The Second Regular Session of the 114th Legislature enacted this review of the University of Maine System (Resolves of 1989, chapter 101) in order to evaluate the effectiveness of the University of Maine System's use of state funding, particularly increased state support of the University since the \$15 million down payment in 1987 recommended by the Visiting Committee to the University of Maine. The Commission to Assess the Impact of Increased State Spending on the University of Maine System was charged with determining the effect of the increased state spending on the following aspects of the University of Maine System:

- Construction of educational facilities;
- Acquisition of equipment, supplies and services;
- Impact on the quality, size, turnover and morale of the faculty, including changes in class sizes and student to faculty ratios;
- Investments to improve the quality of student life;
- Range of academic offerings;
- Comparison of increases in administrative costs relative to increases in program and operating costs; and
- Distribution of funds among the campuses.

In addition, the Commission was given the broadest authority to study any other issues that the Commission deemed relevant. Although the Commission's name indicates that it should look at the effect of <u>increased</u> state spending, the \$9.6 million deappropriation from the University during the 2nd Regular Session of the 114th Legislature and the concern it has generated within the University System, the Legislature, and the general public prompted the Commission to concentrate on the effect of <u>decreased</u> state spending as well.

The Commission held its first meeting on July 31, 1990, generally holding its meetings at the System Office/Chancellor's Office in Bangor on approximately a monthly basis. The Commission had staff pull together voluminous quantitative data related to many of the above aspects and had presentations from faculty and others on various topics.

In addition, the Commission solicited comments from interested students, faculty, and employees of the University of Maine System. An initial advertisement in publications at each of the campuses generated fourteen written responses. To supplement this the Commission decided to hold a public meeting on November 9th. Utilizing the Interactive Television Network, the Commission was able to receive 3 hours of testimony from all across the State.

University Purpose and Organization

The University of Maine System, as the state university of Maine, provides undergraduate, graduate and professional education in a variety of fields, conducts research and performs public service for the People of Maine. The 103rd Legislature voted to combine all units of the State College System and OPAL - Orono, Portland, Augusta, Law School - creating a consolidated University of Maine System in 1968 with a single Board of Trustees.

The University System currently consists of the following seven institutions:

- The University of Maine ("UM"), located at Orono and Bangor;
- The University of Maine at Augusta ("UMA");
- The University of Maine at Farmington ("UMF");
- The University of Maine at Fort Kent ("UMFK");
- The University of Mine at Machias ("UMM");
- The University of Maine at Presque Isle ("UMPI"); and
- The University of Southern Maine ("USM"), located at Portland and Gorham.

The University System also includes central administrative offices and the Maine Public Broadcasting Network ("MPBN").

Board of Trustees - Governance

The University System is governed by a 16-member Board of Trustees. Fourteen members are appointed by the Governor for five-year terms. One member is a full-time student in the University System nominated by the Governor from a list of six eligible students submitted by the University System's Organization of Student Governments. The student member serves for a two-year term. The Maine Commissioner of Education serves as a voting member ex-officio of the board. The nominations of the members appointed by the Governor are subject to review by the State Legislature's Joint Standing Committee on Education and to confirmation by the Maine Senate.

The Board is empowered by law to appoint a Chancellor to serve at the Board's pleasure and to appoint a President, nominated by the Chancellor, for each Institution of the University's System. The Board, in consultation with the Chancellor, is the governing and planning body of the University System and is responsible for preparing and approving the operating and capital budgets of the University System and for presenting them to the State in accordance with law.

University Budget

The University of Maine System is a large and complex institution. In Fiscal Year 1991 the seven-campus system budget is \$321.9 million, of which auxiliary enterprises - self-supporting services like residence halls and bookstores - account for \$45.6 million and sponsored research and other restricted purpose activities for \$64.5 million.

Most of the University budget - \$211.8 million - is in a category called "educational and general" (E&G) that covers the principal missions of instruction, research, and public service, plus the administrative support they require. More than 31 percent of E&G funds come from student tuition fees and other University sources, and 68.9 percent come from the State of Maine. A brief summary of University activities is shown below.

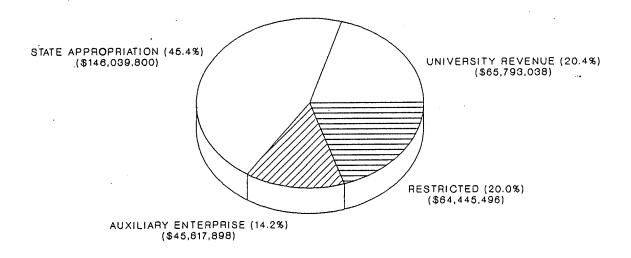

Major University Activities

UNRESTRICTED E & G	AUXILIARY ENTERPRISES	RESTRICTED	ENDOWMENT
Activities which perform the primary mission of	Self-supporting	Supported by external funds	Since July 1, 1986 managed by the Common Fund, a

State Appropriation UMS Revenue	\$146,039,800 65,793,038	68.9% <u>31.1%</u>
Total	\$211,832,838	100.0%

- Educational & General

II. GENERAL FINANCIAL HEALTH

In analyzing the financial health of a public higher education institution, this chapter utilizes the analytical framework developed by the accounting firm of Peat, Marwick, Mitchell and Company. This framework, entitled "Ratio Analysis in Higher Education", makes use of financial information reported in the yearly financial statements of colleges and universities to assess the following questions:

- What is the financial health of the institution for the time period being reported;
- Did the institution live within its financial means during that time period;
- What is the status of the specific financial variables which determine the answers to the previous two questions; and
- What is the credit worthiness of the institution for this time period?

These questions are addressed by a total of 25 different ratios, categorized into five groups which are presented on the following pages. These ratios are analyzed from the eleven-year period beginning in FY 1980 to the most recent financial statement information available, FY 1990. Exhibit II-A at the end of this chapter provides the actual calculations of these ratios.

Balance Sheet Ratios

The first four ratios are intended to analyze the financial health of the institution over the time period being analyzed.

1. Expendable Fund Balance to General Liabilities assesses the financial health of the University in terms of available cash (liquidity) to meet obligations as they come due. According to the authors of this analyses, a value in excess of 100% or greater is the standard for adequate liquid assets, i.e. assets should be at least equal to liabilities. This ratio appears to have peaked in FY 1987 at 188.67% with the infusion of funds with the \$15 million supplemental appropriation and in FY 1990 declined to 102.95%, just above the standard. The eleven-year average for the University is 120.01%.

- 2. Plant Equity to Plant Debt assesses the institution's total investment in plant compared to the funds borrowed to finance the University's plant. The University of Maine System greatly exceeds the 300% standard (the value of plant should be three times the borrowing to finance the investment in plant) and appears to have peaked in 1988 at 874%. In FY 1990, this ratio declined to 612.76%. The eleven-year average was 665.23%. One of the major reasons why the University greatly exceeds the standard is that the State's General Fund Bond Issues to support University plant are not included.
- 3. Expendable Fund Balance to Total Expenditures and Mandatory Transfers describes the institution's ability to support current level of operations based on currently expendable resources. The suggested standard for this ratio is 33% (the expendable fund balance should be sufficient to cover expenses for one-third of a year) or positive numbers as long as Ratios 1 and 2 indicate financial health. While this University ratio has not attained the 33% standard, the eleven-year average was approximately 14% and was positive in each year. With the good health indicated in Ratios 1 and 2, these levels are acceptable.
- 4. Non-Expendable Fund Balance to Total Expenditures and Mandatory Transfers assesses the financial health in terms of non-expendable fund balances with the assumption that interest income earned on these balances significantly affects the institution's health. The positive values for the University of Maine System and the eleven-year average of 20.82% appear to indicate financial health. However, this ratio also indicates a declining trend since FY 1983.

Net Operating Ratios

These ratios determine whether the institution has lived within its financial means.

5. Net Total Revenues to Total Revenues indicates whether the University's total current operations for the year resulted in a surplus or deficit. With one exception in FY 1984, the University operated in the black (with a surplus). The deficit in FY 1984 was primarily due to a delay in a \$2 million payment for a University collective bargaining agreement by the State until FY 1985. The surplus over the eleven-year period averaged 1.64% of total revenues. These surpluses are not cumulative as balances are included in the next year's This ratio reached a peak in FY 1987 revenues. coinciding with the \$15 million down payment recommended by the Visiting Committee.

- 6. Net Educational and General Revenues to Total Educational and General Revenues indicates that the University's E&G budget operated in the black; i.e., had a surplus in all except one year, also FY 1984. The delayed collective bargaining payment also accounts for this deficit. The E&G surpluses over the eleven-year period averaged 1.27% of E&G revenues. This ratio also peaked in FY 1987.
- 7. Net Auxiliary Revenue to Total Auxiliary Revenues demonstrates that the University's Auxiliary Enterprises have exceeded a break-even status with a eleven-year average of the surplus equal to 3.60% of total Auxiliary Revenues. This ratio has fluctuated greatly over this period and, in FY 1989, resulted in a slight deficit (-0.69%).

Contribution Ratios

These six ratios highlight the degree for which the Educational and General (E&G) budget of the institution relies on particular funding sources. While no standards or thresholds are suggested, these ratios are best analyzed with respect to trends and the appropriateness of the allocation.

- 8. Tuition and Fees includes all tuitions assessed by hours to students including residence and students, full-time non-residence and part-time students, and graduate students. Fees paid by students are also included and represent such items as course application fees, matriculation fees graduation fees. Board approved tuition and waivers are reduced from this amount and include such waivers as indians, war orphans, employees and foreign students. This ratio has averaged 21.24% of total E&G expenditures since FY 1980. This figure had been declining in recent years. However, this ratio jumped from 18.58% in FY 1989 to 19.97% in FY 1990. The most recent proposed tuition increases will not affect this ratio until FY 1991.
- 9. Federal Revenues are composed of all expendable grants, contracts, and appropriations received from federal agencies such as U.S. Department of Agriculture, Department of Education and National Institute of Health. Examples of the use of these revenues are for Maine Agricultural Experimental Station, Cooperative Extension Service, Research and Student Financial Aid (by College Work Study Programs and Pell grants). The ratio has averaged 19.73% of total E&G expenditures. As expected, it has demonstrated a declining trend since its peak in FY 1980.

- 10. State Revenues are received as an appropriation for general operations. These revenues may also include state funded grants and contracts for research and public service activities, as well as state support for financial aid such as Blaine House Scholarship Program or the Maine Student Incentive Scholarship Program (MSISP). States revenues averaged 48.92% of the support for total E&G expenditures with an increasing trend. The State's share of the total declined from 56.02% in FY 1989 to 55.79% in FY 1990, and is likely to continue to decline in FY 1991.
- 11. Other Revenues are all miscellaneous revenues not described in other major contribution ratios. These other revenues are made up of sales and services of educational activities, such as student health fees, library fines, parking fees and fines, athletic ticket sales and farm sales. Additional activities reported in other revenues are Temporary Investment Income and income from Conferences and Institutes. The ratio has averaged 7.31% remaining relatively constant over this period.
- 12. Private Gifts and Grants is composed of all expendable gifts and grants from private sources such as foundations and industry. These revenues are basically used for research, public services and student financial aid. The ratio has averaged 3.51% over the eleven-year period with an increasing trend.
- 13. Endowment Income is composed of all revenue (income earned) from unrestricted and restricted donations that are endowed. Gain and losses on investments are excluded. The majority of this revenue is used for student financial aid. This ratio has fluctuated about the eleven-year average of 0.59%.

Demand Ratios

The eight demand ratios highlight the allocation of Educational and General Revenues of the University among functional areas. Like contribution ratios, there are no specific standards, rather the data should be assessed for overall trends and appropriateness of allocations.

14. Instruction includes all expenditures for all University instruction, departmental research public service that are not separately budgeted, departmental chairs that are still involved instruction, and excludes academic administration such as academic deans. This functional area has received on average approximately 33.39% of total E&G revenues over the eleven-year period. This area's share has demonstrated an increasing trend over this period. However, this amount declined slightly in FY 1990.

- 15. Research includes all expenditures for activities specifically organized to produce research outcomes, whether commissioned by an outside agency or separately budgeted. This area averaged 9.72%. Its lowest share was in FY 1988 and has increased slightly in both FY 1989 and FY 1990.
- 16. Public Service includes all funds expended for activities which are established primarily to provide non-instructional benefits to individuals and groups external to the University such as the Cooperative Extension Service and Maine Public Broadcasting Network. This area averaged 9.6% with some recent increases in this allocation. However, its FY 1990 share of the total represented a slight setback.
- 17. Academic Support includes all support services for the University's primary missions of instruction, research, and public service such as: libraries, museums, galleries, educational media services, academic computing support (excluding administrative data processing), academic administration (all campus deans), faculty development, and course and curriculum development. This area averaged allocations of E&G revenue of 9.5%, again with increases in recent years.
- 18. Student Services includes those expenditures with the primary purpose of contributing to the student's emotional and physical well-being and intellectual, cultural and social development outside the context of formal instruction program such as: services administration, student newspapers, intramural athletics student organizations, counseling and career quidance, financial aid administration, admissions, student records, and student health services. This area averaged 6.74% with a slightly increasing trend over the eleven-year period.
- 19. <u>Institutional Support</u> includes expenditures for the Chancellor's Office, the Board of Trustees, campus executive and fiscal management, administrative computing support, and public relations. This averaged 8.59% over this period, peaking in FY 1987.
- 20. Operations and Maintenance includes all expenditures for plant operations and maintenance net of the amounts charged to Auxiliary Enterprises. This area averaged 8.71% over this period and has exhibited a slight downward trend in recent years.

21. Student Aid includes grants-in-aid, tuition and fee waivers, prizes to undergraduate students, and graduate student stipends but not financial aid administration. This area averaged 12.46% of total E&G revenues over the eleven year period and has demonstrated a downward trend since its peak in FY 1980 of 17.24%. This decline is largely due to the decline in federal support.

Credit Worthiness Ratios

The last four ratios seek to measure credit worthiness through a variety of measures of ability to pay.

- 22. Available Assets to General Liabilities has averaged 618.26%, available assets are more than 6 times the amount of liabilities, which is well in excess of the 200% standard, indicating that the University is a good credit risk.
- 23. <u>Debt Service to Unrestricted Current Fund Revenue</u> has averaged 1.43% over the period of analyses and has exhibited a downward trend, again meeting the standards of this ratio analyses. Debt Service has increased since reaching its lowest point in FY 1987.
- 24. Matriculated Students to Completed Applications has been included as a measure of credit worthiness due to the dependence of institutions on tuition and fees as a source of revenue. Therefore, the attractiveness of the institution to students will affect revenues. This analysis in the case of the University of Maine System should be viewed in two segments due to a change in the method of calculation beginning in Fiscal Year 1987. In both segments the University attractiveness appears to be stable.
- 25. Trend in Full-Time Equivalent Enrollment uses 1980 as a base year to compare changes in enrollment, with the assumption that institutions, particularly private colleges, are dependent on tuition and fees as a major source of revenues. While the University of Maine System had shown a declining trend until Fiscal Year 1988, the three most recent years indicate a rebound in enrollments.

Conclusions and Recommendations

The Commission conducted a standardized analysis of a set of ratios specifically developed for higher education institutions to assess the credit worthiness, asset allocation, and general financial health. This analysis indicated that the University of Maine System has maintained a record of good overall financial standing through 1990. However, this analysis only begins to demonstrate the effect of the 1990-1991 biennium reductions in the General Fund appropriations to the University of Maine System. The Commission noted with concern what appears to be a general decline in many of these ratios from recent peaks in either 1987 or 1988. The greatest impact of the reductions will occur in 1991 which could not be included in this analysis. Therefore, it is likely that these downward trends will be exacerbated for 1991.

This analysis also provided an overall picture of the trends in University funding sources and uses. One of the most prominent trends has been the decline in Federal Revenue; its share has been reduced by nearly one-half since 1980. State support has had to make up the greatest part of this reduction in federal support. Although tuition and fees have generally been declining as a share of the total, the reductions in the state's General Fund appropriations to the University will reverse this trend and again place a greater burden on students. In addition, the decline in federal revenue has had its greatest impact on Student Aid.

III. AGGREGATE LEVEL OF STATE FUNDING

This chapter provides a historical analysis of the state's support of the University of Maine System and the level of funding to the University System as a whole. The effect of the changes in the level of funding on the activities and at the campus level will be discussed in later chapters.

General Fund Appropriations - Historical Analysis

Exhibit III-A, "University of Maine System - General Fund Appropriations - 1968 to 1991" and the accompanying graph, at the end of this chapter, provide a historical analysis of the level of General Fund appropriations to the University of Maine System since its establishment in 1968. This analysis also includes inflation deflated appropriation levels using the Higher Education Price Index (HEPI). The HEPI is similar to the Consumer Price Index (CPI), however, HEPI utilizes the set of goods and services purchased by higher education institutions. The CPI utilizes the set of goods and services purchased by urban consumers. HEPI has been higher than the CPI in most years except in periods of high inflation such as during the early 1980's. The difference between the two indexes is a result of the inclusion of salaries and wages as one of the components in HEPI. The use of HEPI provides an accurate picture of the real growth of the state's support to the University of Maine System.

There have been three major events impacting State support of the University since its creation in 1968.

- 1. The first event occurred just over a decade ago (FY 1977) when Governor Longley reduced the University's appropriation by 7.7% -- this was a cut in the base appropriation, not a reduction of an increase. In real terms, this resulted in a 13.38% reduction.
- 2. The second event occurred in FY 1987 (ten years later) when the Visiting Committee (VICOM) recommended a \$15 million increase in State support to the University as a down payment for basic operating support. This infusion of funding resulted in a 27.16% growth in appropriations to the University System (22.09% in real terms).
- 3. The third major funding event occurred in the current biennium (1990-1991) when, due to lower than projected state revenues, the University's appropriation increases were reduced by \$9.6 million. The University's appropriations still grew by 6.62% and 6.2% in 1990 and 1991 respectively, representing small real growth rates of 0.57% and 0.16%.

Exhibit III-A also provides average growth rates, both nominal and real, for several periods. From FY 1968 to FY 1975, the University of Maine System enjoyed average annual growth rates of 11.47% and 4.65% in real terms. However, from FY 1975 to FY 1979, appropriations to the University grew by only 0.90%. This translated into negative real growth during this period of -5.51%. Average growth rates improved during the early 1980's, but from FY 1979 to FY 1984, they still averaged only 1.02% real growth. Since FY 1984, the University has enjoyed average nominal growth rates of 13.75% and average real growth rates of 8.10%.

University vs Total Education Funding

One of the goals often cited by the University's administration is to improve the University's share of the State's "budget pie." Exhibit III-B and the three accompanying graphs provide a historical analysis of the University's status in this area. General Fund appropriations to the University are compared to actual total expenditures by the State for all educational programs and to total General Fund revenues. Total educational expenditures are also compared to General Fund revenues. This analysis also attempts to adjust for the effects of inflation by using a price deflator. A slightly broader index than HEPI is used for this analysis. The State and Local Government Price Deflator used in this case tracks fairly closely to the HEPI because it also includes salaries and wages.

The University System's total appropriation as a percentage of the state's general fund revenues has ranged from a high of 15.5% in FY 1968 to a low 7.8% in FY 1984. It is currently estimated to be 9.5% for DY 1991. From FY 1968 to FY 1976, the University's appropriation as a percentage of state revenues dropped from 15.5% to 11.2%. From FY 1976 to FY 1979, this percentage dropped further to 8.2% as a result of Governor Longley's budgets. Since FY, 1978 there has been a modest rebound bringing the University's share of state revenues to an estimated 9.5% in the current year.

The University's share of total educational expenditures also shows parallel variations with one notable exception, which is best illustrated in the first of the three graphs. In FY 1975, the share educational expenditures to General Fund revenues shot significantly. However, it was at the same time that University's share of both educational expenditures and General Fund began to decline. This was caused primarily by a significant increase in the State's share within the school subsidy formula from 33 1/3% to 50%.

The increase in the school subsidies resulted in a one-time significant realignment of the University's share of both the educational budget and total State budget at a lower level. After this realignment and the budget cut in FY 1977, the University's share of these respective budgets has remained relatively constant and improved slightly in most recent years.

Other Maine Public Higher Education Institutions

This analysis provides a comparison of the General Fund support of the University of Maine System versus state support of the Maine Technical College System and the Maine Maritime Academy from FY 1980 to FY 1991. Annual percentage increases are compared as well as the respective share of total educational expenditures and the shares of total General Fund revenue. Real analysis using price deflators is not used in this Exhibit III-C and the three accompanying graphs at the end of this chapter as the comparison between the institutions would not be improved. However, if the HEPI is used, average annual real rates of growth since 1980 have been:

University of Maine System	5.24%
Maine Maritime Academy	3.98%
Maine Technical College System	2.07%

The University over this period generally fared better than the other two institutions on average. However, the Maritime Academy and the Technical Colleges weathered the 1990-1991 budget reductions better than the University. Average growth rates for the University of Maine System during the current, 1990-1991, biennium are approximately 6.4% compared to 15.8% for the Maine Maritime Academy and 8.7% for the Maine Technical College System.

General Fund Bond Issues

This chapter is intended to highlight the aggregate level of state support of the University of Maine System since its establishment in FY 1968. However, the analyses of this chapter ignore the state funding of the University through General Fund bond issues. The list below presents a summary of the General Fund bond issues designated for the University. The voters of Maine have generally been very supportive of University of Maine System bond issues. See Chapter VIII for a more detailed description of the use of these bond proceeds.

105th Legislature	\$ 8,360,000
109th Legislature	\$ 2,000,000 *
lllth Legislature	\$16,500,000
112th Legislature	\$ 7,700,000
113th Legislature	\$36,800,000

^{*} University of Maine's share of a bond issue for Energy Conservation Projects.

Visiting Committee Report

The Visiting Committee to the University of Maine was established in 1974 to conduct a public review of the University of Maine System as a whole. In particular, the Committee was asked to review the University's overall mission and program priorities for the remainder of the century, its governance, the distinct mission

of each campus, the methods used for allocating funds among the campuses, and the relationship between the University and the Technical Colleges and the Maritime Academy.

The Visiting Committee completed its work and issued its report in January of 1986. One of the most fundamental recommendations of the Visiting Committee was the enactment of an immediate \$15 million supplemental appropriation "as a down payment on the long-term investment necessary to develop the University System Maine needs." Legislature and the Governor passed that \$15 supplemental appropriation for FY 1987. The University Board of Trustees and the University's administration began to implement many of the recommendations with this down payment. However, the recent budget developments have put many of these recommendations on hold. Later chapters will deal more specifically with some of the specific recommendations and the extent to which they have been implemented.

1990-1991 Budget Reductions

After several years of double digit growth in total General Fund appropriations, FY 1990 revenues actually were below FY During the interim between the First and Second Regular levels. Sessions of the 114th Legislature, the Governor was forced to reduce General Fund revenue estimates and propose significant reductions in amounts appropriated during the First Regular Session. final package approved by the Legislature during the Second Regular Session resulted in reductions of General Fund appropriations from appropriated during the First Regular levels Session \$65,112,689 in FY 1990 and \$40,688,107 in FY 1991. Exhibit III-D highlights the effect of the budget reduction packages on the General Fund appropriations to the major departments and agencies. The remainder of the \$210 million dollar reduction package was covered by various revenue enhancing programs. Total General Fund appropriations still managed to grow due to a substantial surplus It is important to note that these so-called carried forward. budget reductions were, for most state agencies and departments and the University of Maine System, only a reduction in the increases received during the First Regular Session.

The decrease in the General Fund appropriations between the First and Second Regular Session levels represented reduction for FY 1990 and a 2.5% reduction in FY 1991. University of Maine System's reductions of \$3,031,419 and \$6,600,000 in FY 1990 and FY 1991, respectively, represented reductions of 2.12% and 4.45%. The University of Maine System's reduction for the 1990-1991 biennium was 3.23%, approximately the same as the 3.25% reduction for total General Fund appropriations. As mentioned above, General Fund appropriations in each year grew both in total and for the University. Total General Fund appropriations grew by 7.4% after the reductions in FY 1989-90 and by 6.97% in FY 1990-91. The University of Maine System appropriations grew by 6.62% and lagging behind the growth in total General If the University's appropriations had kept pace appropriations. the `increase in total General Fund appropriations, the University of Maine System would have received more than \$1 million funding each year (\$1,022,545 in FY\$1,084,117 in FY 1990-91).

While the University of Maine System's Educational and General appropriation was reduced by \$9.6 million, the actual effect on the total E&G budget was lessened by an increase in tuition with the net reduction to the total E&G budget of \$7.6. The increase in tuition rates for 1990-91 was budgeted to offset \$2 million of Of the \$3 million deappropriation from E&G in FY 1990 (MPBN's deappropriation was \$31,419 in FY 1990 and \$0 in FY 1991), \$2 million of the cuts would be postponed until FY 1991 by deferring expenditures due to the limited amount of planning time. Therefore, the University of Maine System needs to reduce its FY 1991 E&G budget by approximately \$6.6 million, 3.1% of the total E&G budget. The following chapters will deal more specifically with the effect of the cuts on the individual campuses, their programs, and their activities.

Conclusions and Recommendations

The late 1970's had a significant impact on the level of state funding of the University of Maine System. The negative real growth during this period combined with other factors, such as the increase in state support of local education, and decreased the University's share of both General Fund revenue and total education expenditures.

Overall, State support to the University has improved during the 80's. The \$15 million down payment recommended by the Visiting Committee to the University of Maine provided much needed catch-up funding and a tremendous boost to employee morale and program quality.

While the University still received a 6% annual increase 1990-1991 appropriations following the reductions, its increases lagged behind the growth in appropriations for the Department of Educational and Cultural Services, the Maine Technical College and the Maine Maritime Academy. The University's appropriation increases even lagged behind the growth in total General Fund appropriations during the 1990-1991 biennium.

NOTES: Real Analysis uses State and Local Price Deflator (Calendar 1982 = 1.00)

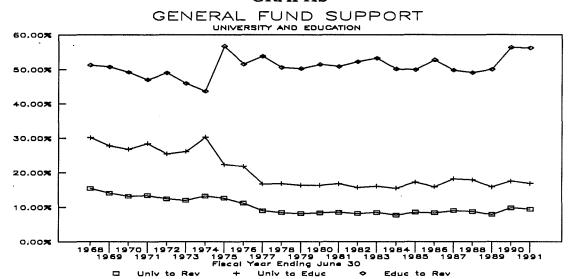

University of Maine Figures include MPBN appropriations.

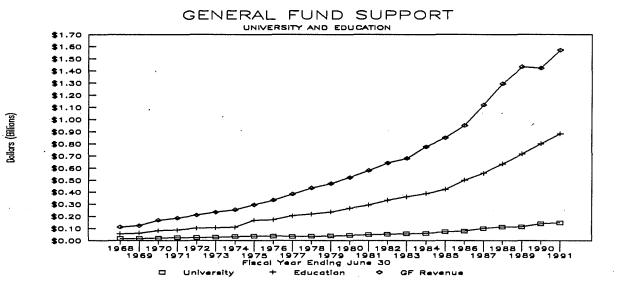

Education Expenditures include Dept. of Educ. & Cult. Services, Hist. Soc., Tech. Colleges, Maritime Academy, and the University.

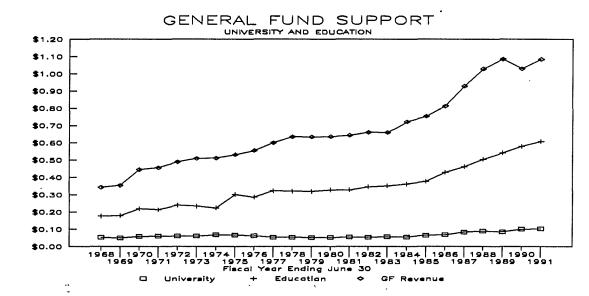

Appropriations to the Finance Authority of Maine for Student Financial Aid Programs are also included.

Amounts for 1990 and 1991 represent appropriations or budgeted amounts through the 114th Legislature.

IV. CAMPUS AND MISSION ALLOCATIONS

This chapter provides an analysis of the distribution of funds among the campuses. Exhibit IV-A at the end of this chapter concentrates on the Educational and General (E&G) budgets of the campuses and the allocation of the University's E&G General Fund appropriation among the campuses by the Board of Trustees. The General Fund appropriation to the Maine Public Broadcasting Network (MPBN) is not included in this chapter because it receives a separate appropriation determined by the Legislature and the Governor.

Exhibit IV-A details the distribution of the E&G budget and the General Fund E&G appropriation for each of the seven campuses and the Chancellor's Office/System-Wide Services. It also provides each campus' percentage share and the annual growth both nominal and real (again using the Higher Education Price Index as the price deflator) of both E&G budget and E&G appropriation.

Exhibit IV-A also looks at the dependency of each of campuses on the General Fund to support the E&G activities of each campuses, which indicates, to a limited degree, vulnerability of each of the campuses and their missions to changes in the level of state support. The University of Maine System as a whole is heavily reliant on the State for financial support as is expected of a public educational institution. The University System will depend on the General Fund appropriation to account for 45.4% of its total budget in FY 1991. It is even more dependent on the support its E&G budget. Ιn FY1991, appropriation accounts for 68.9% of the E&G budget. Ratio #10 in Chapter II also highlighted a growing dependence on state funding in the 1980's.

The intent of this chapter is to provide some insight into the effect of the \$15 million down payment in FY 1987 and the 1990-1991 biennium budget reductions on the allocation of funds to the campuses. It concentrates on the effect of changes in state spending on the allocation of funds to the campuses on an aggregate basis. The next chapter will concentrate on the use of the funds at the various campuses.

E&G Budget Allocation Process

The allocation of budget resources within the University of Maine System involves several phases. The most politically sensitive of these allocation decisions is the distribution of the General Fund E&G appropriation. The process is not only politically sensitive with respect to the individual campuses, but the Governor, individual Legislators, and the Legislature as a whole have been keenly interested in this process. Therefore, the Board of Trustees often allocates the General Fund appropriation according to a

formula, such as each campus' share of the total budget. This was true in the decision to allocate the 1990-1991 biennium reductions. These were allocated to each campus based on the FY 1989 E&G base budgets of each of the campuses.

Based on this formula-type distribution, one would expect the E&G appropriation distribution among the campuses to remain fairly constant over time. However, there are a number of other variables which come into play, such as individual campus decisions and special allocations initiated by either the Board of Trustees, the Governor, or the Legislature. Recent examples of these are the Lewiston/Auburn College at the University of Southern Maine and the Community College of Maine at the University of Maine at Augusta.

Campuses are responsible for determining their revenue budgets each year. This involves making decisions about the level of services that will be provided, the number of courses to be offered, and the level of fees to be established for non-tuition related services. These decisions impact the level of enrollment and the expected campus revenue that will be realized from the various revenue sources. Any changes in revenue level that are not related to tuition changes are reflected in campus expense budgets, i.e., if campus revenues increase, campus expense budgets are increased by an equal amount and vice versa. Because campus revenue budgets have an impact on campus expense budgets, they also have an impact on the campus share of the total system expense budget and state appropriations.

In addition to campus revenue planning, the budget allocation process involves a detailed fiscal planning process that includes individuals at all levels of the organization. This planning process ultimately results in a budget plan that is approved by the Campus Presidents, the Chancellor, and the Board of Trustees. This budget plan includes:

- campus reallocations within existing resources;
- campus budget adjustments due to revenue changes (described in the previous paragraph) and;
- new funding for collective bargaining, inflation, and priority program needs.

By the nature of some of these elements, there is a disproportionate allocation of resources among the campuses. For example, if a campus has a high number of faculty who are receiving a higher than average compensation increase, that campus will get a higher share of the funding for compensation increases. Another example would be an allocation of program funds to address a specific need, i.e., improve access at certain campuses or address a specific weakness at a campus.

University of Maine

The University of Maine (UM) has a mission established by the Board of Trustees to be the Land-Grant and Sea Grant institution of the University of Maine System. Land grant colleges were first established under the provisions of the federal Morrill Act (1862) which provided federal lands to each state which could be sold and the proceeds used to establish an endowment for the purposes of creating public state controlled institutions of higher education. Originally intended to stress education in agriculture and mechanic arts, the missions of land grant institutions have expanded over time to encompass all aspects of a well rounded "liberal and practical education". At the present time, there are 71 Land Grant institutions across the 50 states and protectorates; 16 states have two designated institutions.

Sea Grant institutions also exist through federal funding received from the Office of Sea Grant, National Oceanic and Atmospheric Agency. The UM's status as a Sea Grant institution is in partnership with the University of New Hampshire and enables UM to provide a program of marine research, graduate education and a marine extension program.

As the Land and Sea Grant institution within the University of Maine System, UM has three primary responsibilities:

- provide undergraduate and graduate' educational programming;
- conduct basic and applied research of a state, national or international significance; and
- provide statewide public service programming.

UM has accounted for approximately half of the E&G budget of the University of Maine System and approximately the same share of the System's E&G General Fund appropriation. UM's shares of the E&G budget and E&G appropriation have declined since FY 1988 and FY 1987, respectively. This is largely due to new initiatives at some of the other campuses. UM's E&G budget and E&G appropriation have grown nominally since FY 1986 and, with the exception of FY 1990 and FY 1991 have grown in real terms. UM depends on the General Fund for 66.43% of the campus' total E&G Budget in FY 1991.

UM's share of the \$15 million down payment was \$8,467,155 or 56.45% of the total. The percentage represented an increase in its allocation of the General Fund appropriation. However, as noted above, UM's share did not improve significantly. UM's share of the 1990-1991 reductions was established at 51.2% equal to its share of the FY 1989 E&G budget of the System. This represents a \$512,000 cut in FY 1990, \$1,024,000 of deferred expenses from FY 1990 to be funded from FY 1991 resources, and an additional \$2,355,200 in FY 1991. UM also postponed its FY 1990 \$512,000 cut to FY 1991. UM decided to realize its entire biennium cut in FY 1991 which totals \$3,379,200.

University of Maine at Augusta

The University of Maine at Augusta (UMA) has a stated mission from the Board of Trustees to be the Community College of the University System. In that capacity, UMA has chosen to emphasize the following responsibilities:

- provide open access to inadequately prepared students who wish to eventually take college level courses;
- offer appropriate associate degree programs which may also be used as the first two years of a baccalaureate degree; and
- delivery of programs through extensive use of off-campus centers.

UMA also offers a limited number of its own baccalaureate degree programs, as well as baccalaureate and masters programs which are brokered from other campuses in the University of Maine System.

Most recently, UMA was designated by the Board of Trustees as the campus responsible for the implementation and administration of "The Community College of Maine/Telecommunications System".

UMA has averaged 5.41% of the total E&G budget since FY 1986 and 5.19% of the total E&G General Fund appropriation. Its share has increased the greatest, particularly in recent years. The major reason for this was the addition of the Interactive Television Network/Community College of Maine program. (See accessibility section of this chapter.) UMA's dependence on the General Fund has averaged 66.20% of its E&G budget since FY 1986.

UMA's share of the \$15 million on down payment was \$696,500 or 4.64%. This represented an increase in its share. Its share of the 1990-1991 biennium reductions was 5.3% or \$53,000 in FY 1990 and \$296,800 in FY 1991.

University of Maine at Farmington

The University of Maine at Farmington (UMF) has a mission to be a regional baccalaureate institution within the University of Maine System. In addition to its regional mission, UMF emphasizes its long history as a center for undergraduate teacher training in the State. While striving to maintain leadership as a teacher education facility, in recent years UMF has broadened its academic mission to liberal arts, sciences and human services.

UMF is also an educational research and cultural center for the region which it serves and includes public service to the community as an important responsibility.

UMF has accounted for approximately 6% of both the total E&G budget and the E&G General Fund appropriation (averaging 6.07% and 6.00%, respectively, since FY 1986). Its percentage shares have declined slightly since FY 1986. UMF's reliance on the General Fund has averaged 68.32% of its E&G budget since FY 1986.

UMF's share of the \$15 million down payment was \$908,000 or 6.05%. This was slightly below its allocation percentage of the 1986 General Fund E&G appropriation. Its share of the 1990-1991 biennium reductions was 6.1% or \$61,000 in FY 1990 and \$341,600 in FY 1991. Again, this distribution is based on its FY 1989 share of the E&G budget.

University of Maine at Fort Kent

As defined by its current mission statement, the University of Maine at Fort Kent (UMFK) exists as a regional baccalaureate institution of the University of Maine System. Within that context, UMFK has a particular mission which is directly related to the nature of the region it is located in. UMFK fashions itself as an institution which functions as an educational and cultural center for the St. John River Valley region; a region which has predominant French-Canadian, Acadian and Anglo cultural influences.

In adapting to its unique cultural setting, UMFK strives to meet the bicultural educational needs of traditional and non-traditional students by offering a variety of undergraduate associate and baccalaureate degree programs, cultural programs, public service programming for the region and the offering of several graduate programs originating from other campuses in the University of Maine System.

UMFK represents the smallest percentage of the E&G budget and General Fund appropriation, averaging 1.88% and 2.13% respectively since FY 1986. This has declined steadily in the 1980's. However, UMFK's E&G budget and appropriation have grown since FY 1986 and, with the exception of the current biennium, it has grown in real terms. It dependence on the General Fund has averaged 78.18% of UMFK's E&G budget since FY 1986.

UMFK's share of the \$15 million was \$68,000 or 0.45% of the total. This was below its FY 1986 allocation percentage which was 2.43%. Its share of the budget reductions is established at 1.9% or \$19,000 in FY 1990 and \$106,400 in FY 1991.

University of Maine at Machias

As defined by its current mission, the University of Maine at Machias (UMM) is a regional baccalaureate institution within the University of Maine System. It's location in Machias establishes UMM as the easternmost public university in the United States. UMM seeks to maximize its unique geographical location by providing academic programs which integrate an awareness of the natural environment into the various curriculums. UMM prides itself in offering noteworthy academic programs in science, recreation management and teacher education.

UMM also interprets its mission as a responsibility to provide applied research, public service, and cultural opportunities to the larger Washington County Area.

UMM University of Maine at Machias represents the second smallest of the E&G budget and General Fund appropriations, averaging 2.45% and 2.69% respectively since FY 1986. This has also remained relatively constant over time. Like the UMFK, UMM is one of the most heavily dependent on the General Fund support which has averaged 75.83% of its E&G budget.

UMM's share of the \$15 million was \$501,000 or 3.34%. This percentage was above UMM's average historical percentage. However, this increase was short-lived as UMM's share has declined from FY 1988 to FY 1990.

University of Maine at Presque Isle

The University of Maine at Presque Isle (UMPI) has a mission as a regional baccalaureate institution within the University of Maine System. UMPI interprets this mission as an obligation to provide diverse academic programming, research, public service, and cultural programming to Aroostook County as well as to other in-state and out-of-state students.

UMPI also seeks to fulfill its mission by providing graduate programs originating from other University of Maine System campuses, as well as through the establishment of outreach centers at Loring Air Force Base and in Houlton.

UMPI has averaged 3.68% of the System's total E&G budget and 3.95% of the total E&G General Fund appropriation since FY 1986. These percentages have declined from their FY 1986 levels of 4.02% and 4.44% respectively. The actual amounts received have grown and, with the exception of this biennium, they have grown in real terms. UMPI is also heavily dependent on General Fund appropriations which averaged 74.32% of its E&G budget since FY 1986.

UMPI's share of the \$15 million down payment was \$215,000 or 1.43%. This was below UMPI's FY 1986 share of the E&G appropriation which was 4.44%. UMPI's share of the 1990-1991 total biennium reduction was 3.7% or \$37,000 in FY 1990 and \$207,200 in FY 1991.

University of Southern Maine

The University of Southern Maine (USM) has a mission from the Board of Trustees to be the urban comprehensive campus for the University of Maine System. USM also has a mission to be "one of" the graduate centers for the system.

In accomplishing its mission as an urban comprehensive University, USM has been directed by the Board to develop overall programming that is aimed at a diverse, non-traditional student body. One of the recent additions to this mission was the opening of the Lewiston/Auburn College which is affiliated with USM. (See accessibility section of this chapter.) Further, USM has been mandated to develop an educational effort which:

- improves education in public schools;
- strengthens management capabilities of individuals and organizations;
- contributes to the development of public policy;
- leads the effort to improve human service efforts in the state;
- develops technologies essential to the southern Maine region; and
- enhances the overall quality of urban life.

Finally, like the other campuses in the University of Maine System, USM has a public service responsibility to the region in which it is located.

The University of Southern Maine has averaged 22.79% of the total E&G System's budget and received 22.27% of the University's E&G General Fund appropriation since FY 1986. Its share has declined slightly since its peak in FY 1987. USM has relied on the General Fund for an average of 67.59% of its E&G budget since FY 1986.

USM's share of the \$15 million down payment was \$4,144,345 or 27.63%. This was significantly above USM's FY 1986 share of 21.58%. USM's E&G budget and appropriation have grown in real terms since FY 1986 in every year except FY 1991. Its share of the 1990-1991 reductions was 22.7% which was its share of the FY 1989 total system E&G budget. USM, like UM, postponed its FY 1990 reductions until FY 1991. Therefore, its FY 1991 reduction totals \$1,498,200.

Chancellor's Office and System-Wide Services

The Board of Trustees relies on the Chancellor and the various offices that are under his responsibility to provide system-wide leadership and to administer certain system-wide responsibilities. Although it is common for many to make a generic reference to the "Chancellor's Office" (CO) when discussing the wide range of system-wide services (SWS) that currently exist, it is necessary to accurately identify the various organizational units and the particular services provided on a system-wide basis.

An accurate reference to the "Chancellor's Office" refers to but a small part of the total array of system-wide personnel and services. In brief, these individuals and functions can be separated out as follows:

- <u>Chancellor's Office.</u> Includes the System's most senior chief executive officers and their immediate support staff;
- Operating Departments. Provide administrative services and coordinating functions, such as accounting, payroll, human resources, collective bargaining, facilities, computer center, etc., for the System as a whole; and
- System wide costs. Certain costs incurred by the sever campus system are identified as system-wide costs and are administered by the Chancellor's Office and the various operating departments.

The Chancellor's Office and System-Wide Services (CO/SWS) has averaged 6.72% of the System's total E&G budget and 7.88% of the System's E&G General Fund appropriation and has grown since FY 1986. CO/SWS is heavily dependent on the General Fund which has averaged 80.86% of its E&G budget, as it has no tuition revenue as the campuses have.

CO/SWS did not receive any direct share of the \$15 million down payment which accounts for the interruption in the growth of the CO/SWS's share of the total E&G budget. However, CO/SWS was allocated a portion of the 1990-1991 reductions based on its FY 1989 share of the system total E&G budget or 6.7%. This translates into reductions of \$67,000 in FY 1990 and \$375,200 in FY 1991.

Most of the growth in the CO/SWS budget is due to special system-wide budget items that are provided to all campuses but managed centrally. Examples are as follows:

- 1. ITV Telecommunications has grown from nothing in FY 1986 to \$1,172,850 in FY 1990. This budget has been transferred to UMA in FY 1991.
- 2. System-wide insurance costs have grown from \$506,883 in FY 1986 to \$939,702 in FY 1990.
- 3. The Computer Center has grown from \$1,898,254 in FY 1986 to \$3,090,245 in order to meet the computing needs of the system.
- 4. Employee benefit costs have grown from \$1,166,318 in FY 1986 to \$2,424,504 in FY 1990. Much of this growth is due to the increased costs of health insurance for University retirees across the system.
- 5. A \$500,000 campus maintenance program is administered and funded centrally providing urgent high cost maintenance support (often on a matching basis) to campus E&G buildings.

The Chancellor's Office (CO) consisted of 11 employees in FY 1986 which grew to 12 in FY 1990. This additional employee was a part-time temporary student employee in the clerk's office who worked a few hours a day for several months. In essence, therefore, the size of the Chancellor's Office remained stable from FY 1986 to FY 1990. A Governmental Relations position was filled in FY 1991. The Chancellor's Office budget has grown from \$553,183 in FY 1986 to \$781,808 in FY 1990, an increase of 41%. This compares to the University System budget increase for the same period of 62%.

Some new items include the establishment in June 1985 of an Augusta Office whose FY 1991 budget is detailed below.

<u>Item</u>	<u>Budget</u>
Service including custodial Supplies & materials Telephone Postage and shipping Electricity incl.elec.heating Other utilities including water Equipment maintenance and	\$ 1,800 3,000 9,000 5,938 6,000
maintenance contracts Office rental Miscellaneous and other expenses TOTAL	5,500 60,200 <u>688</u> \$92,256

Accessibility

One often stated goal of education and higher education specifically is to make it accessible to everyone. The University of Maine System has undertaken two major projects that have contributed significantly towards realizing this goal - the Interactive Television Network (ITV) and the Lewiston-Auburn College. A summary of the appropriations and the increase that they represent are presented in the table below.

Lewiston/Auburn College and Community College of Maine¹

	Lewiston/A	uburn College	Communit of	y College Maine
	Annual	Total	Annual	Total
	<u>Increase</u>	Appropriation	<u>Increase</u>	<u>Appropriation</u>
FY 1988	\$100,000	\$ 100,000	\$ 0	\$ 0
FY 1989	900,000	1,000,000	2,200,000	2,200,000
FY 1990	850,000	1,850,000	$1,528,536^3$	3,728,536
FY 1991	304,692 ²	2,154,692	659,452 ⁴	4,387,988

¹Includes funding for operating costs and employee benefits. ²\$380,000 increase less \$75,308 due to FY 1991 deappropriation.

^{3\$1,550,000} increase less \$21,464 due to FY 1990 deappropriation.
4\$760,000 increase less \$100,548 due to FY 1991 deappropriation.

In its first year and one-half of operation the Community College of Maine (CCM) recorded 10,400 registrations in 133 ITV courses offered at 77 locations across the State. The vast majority of these students would not have had an opportunity to enroll in college otherwise. For example, on the Maine islands of North Haven, Vinalhaven and Islesboro, students wishing to enroll in college have traditionally had no alternative but to relocate to the mainland. Since CCM's inception in September 1989, North Haven has had 92 registrations, Vinalhaven 62 and Islesboro 42 registrations, many of these by women with families, whose only access to higher education is the Community College of Maine.

Conclusions & Recommendations

The University of Maine System budget allocations process is affected by a number of different factors, including individual campus decisions, which make it difficult to draw conclusions about the funding policy of the Board of Trustees. Legislative initiatives have also affected this allocation process. In many instances, the distribution of the University's Educational and General appropriation is based on a formula for equity purposes. This was the case for the allocation of the 1990-1991 reductions, which were distributed based on each campus' share of the 1989 total Educational and General Budget.

Since 1986, the budget and the General Fund appropriations to each of the campuses have grown and, with the exception of the 1990-1991 biennium, they have grown in real terms. However, the 1990-1991 reductions, with few exceptions, represent a real decline in the level of state support for each of the campuses. The two most notable exceptions are the University of Maine at Augusta and the University of Southern Maine. These campuses received funding increases for two of the most recent new initiatives of the System, the Community College of Maine and the Lewiston-Auburn College, respectively.

In reviewing programs and capabilities of the campuses of the University, it became clear that one of the University's strengths is its diversity among campuses. Students benefit from this in terms of academic offerings and scope of educational setting. The State benefits by having such diversity for its citizens without unnecessary duplication.

The Commission encourages the University System, in accordance with the Visiting Committee Report, to continue to refine campus missions in order that campuses serve various geographical areas as well as a diversity of students and constituencies. The University of Maine should develop graduate and research programs in those areas where that campus can compete nationally, while maintaining strong undergraduate programs in all of its colleges. The University of Southern Maine should continue to evolve as a Comprehensive Urban University with

limited graduate programs. The University of Maine at Farmington, University of Maine at Fort Kent, University of Maine at Machias, and University of Maine at Presque Isle should continue to be developed as baccalaureate granting institutions. Additionally, the University of Maine System should develop a community college component, a task which has been delegated to the University of Maine at Augusta. The Commission encourages each campus to fulfill its unique mission with excellence in mind.

V. ACTIVITY AND EXPENDITURE ALLOCATIONS

This chapter reviews the actual expenditures of the campuses of the University of Maine System over the five year period from FY 1986 to FY 1990. The basis for this chapter is a very detailed analysis of the actual expenditures for the total University System and each campus, see Exhibit V-A provided at the end of this These actual expenditures are analyzed by expenditure or object code such as salaries, employee benefits, by activity such as instruction, travel, contracts, etc. and research, student aid. This analysis also included a separate accounting of the \$15 million supplemental appropriation in FY 1987. Actual expenditure data shows the effect of the reductions in FY 1990 which represent only a small portion of the reductions. Therefore, a section is included to discuss the budgeted effects for FY 1991.

Incentive Budgeting

In order to encourage frugality or, more exactly, to discourage excessive spending to use up year-end balances, the Board of Trustees has a policy that 80% of campus year-end budget variances go to an incentive budgeting account for campus discretionary use and 20% is earmarked for maintenance purposes. Although major expenditures from these like reserves, large single-purpose expenditures, generally require advance Trustee or Chancellor approval, the reserves provide a continuing source of off-budget funds for campus Presidents to respond to special opportunities or circumstances. The figures shown below represent 100% of the campus year-end budget variance prior to distribudgeting accounts and maintenance reserves. to distribution to incentive Although the total amount of the variance may seem substantial at \$580,346 in FY 1990, this amount represents approximately 0.3% of the total FY 1990 budget which is actually very close budgeting. Policies at the individual campuses may vary. Some may provide incentives down to department or account level.

University of Maine System

1986, compensation accounted for 78.4% E&G This percentage dropped to 74.7% in FY 1987 due to expenditures. Almost the \$15 million supplemental appropriation. 70% of appropriation was used for goods and supplemental services to bolster departmental operating budgets. This resulted in the goods and services share of expenditures increasing from 21.6% in FY 1986 to 25.3% in FY 1987. In FY 1988 and FY 1989, the University was the improvement faculty System's highest priority of classified employee salaries and wages. As a result of these actions, compensation's share of expenditures grew from 74.7% in FY 1987 to 75.7% in FY 1989. Compensation's share of expenditures further increased to 76.8% in FY 1990. This increase in FY 1990 was due to the \$3 million deappropriation whereby the University had to make substantial cuts in goods and services budgets, especially telephone, travel, and equipment. Because of the deappropriation, the momentum that resulted from the \$15 million supplemental appropriation is jeopardized.

For each of the campuses, a Table summarizes the impact of the \$15 million down payment, the impact of the FY 1990 budget reductions, and general trends over the 1986-1990 period. The Table highlights those activities and expenditures designated by object code that received a disproportionate increase of the \$15 million down payment or decrease of the FY 1990 reductions.

Impact of FY 1991 Reductions

The table below summarizes the impact in FY 1991 of the budget reductions. It includes the number of Full-Time Equivalent (FTE) personnel to be laid off and the percentage of the reductions in expenditures for travel, equipment, and other operating costs. These expenditures and the percent reduction are based on budgeted amounts not actual expenditures as in the previous sections of this chapter.

REDUCI	CIONS IN			
FTE PE	ERSONNEL		BUDGET REI	OUCTIONS
				OTHER

CO/SWS	6	16.8	12.8	2.6
	160	15.3%	15.4%	7.3%

Includes utilities, maintenance, library acquisitions, supplies, etc.

Conclusions and Recommendations

The analysis by the Commission of the expenditure and activity allocations of the individual campuses highlighted that the University of Maine System was forced to cut back in many of the same activities and expenditures during the 1990-1991 biennium that received additional attention as part of the \$15 million down payment in 1987. In particular, travel and equipment received the largest increases during 1987, but have also been targeted for the largest reductions during the 1990-1991 biennium.

VI. HUMAN RESOURCES

previous chapter highlights the importance Resources in terms of the cost of compensation compared to the total This chapter reviews several areas related to University budget. the employees and faculty of the University of Maine System.

Compensation

benchmark with which University personnel gauge standing is the salary increases granted to state employees. table below presents a comparison of the various personnel groups of the University System with the salary increases of the Executive Branch employees of Maine State Government. The increases provided to University employees on average have tracked quite closely to the increases provided state employees. Concern was expressed over the increases in the salaries of the top administration. evidence in recent years indicates that their increases have been below the average percentage increase offered to all University personnel.

GROWTH IN UM SYSTEM AND STATE SALARIES & WAGES

			ancellor E <u>SIDENTS</u> 9		SYSTEM AVERAGE PROFESSIONAL		REASE AVERAGE	STATE OF MAINE EXECUTIVE BRANCH
FY	86		6.0%	7.0%	7.0%	7.0%	7.0%	7.0%5
FΥ	87		*	6.0	6.0	6.0	6.0	6.0
FΥ	88		6.0	10.75^{2}	6.5	6.1	8.2	5.0
FY	89		8.4	10.25 ²	6.5	15.6 ³	10.9	8.6 <u></u>
FY	90		7.8	6.0	6.0	5.5	5.8	8.07

FΥ	92	(Planned)	**	7.0	7.0	7.0	7.0	9.0

^{*} FY 87 was a year in which the University System experienced the appointment of three Chancellors and four Presidents. As a result of this unusual turnover, a meaningful percentage could not be calculated.

** To be determined by the Board of Trustees.

Chancellor \$15,000 -\$15,660 President, UMA \$11,000 \$11,484

Weighted by FY 86 average salary and number of employees. The weighting factors are faculty (.437), professional (.259), and classified (.304).

Represents special targets since UMS faculty salaries were near the bottom of national salary comparisons.

Includes wage adjustments that resulted from a special legislative appropriation to fund a revision to the classified employee job classification program. These increases varied by collective bargaining unit and by employee but averaged 9.5%.

Includes Cost-of-Living plus an average 2% step increase. COLA = 3.5% provided 7/1/85 and 1.5% on 1/1/86.

COLA = 3.0% provided 7/1/88 and 3.0% on 1/1/89.

COLA = 3.0% provided 7/1/89 and 3.0% on 4/1/90.

COLA = 3.0% provided 10/1/90 and 3.0% on 4/1/91.

Housing Allowances: University maintained housing or a housing allowance in lieu of housing is provided.

Employee Benefits

This section provides a discussion of the major employee benefits offered to University of Maine System employees and faculty. These benefits are also compared with the benefits of state employees.

<u>Health Plans</u>. The benefit levels are similar although the plans are structured differently.

The University pays full cost for single, married and family coverage but this dollar amount is less in all categories than the 60% of premium the state pays as their portion of the insurance for spouse and family coverage.

The University has a comprehensive plan with a \$150 deductible, the state a basic/major medical plan with \$100 deductible. Both plans require pre-admission certification for hospitalizations and some surgeries. The state has prescription card arrangements for both mail order and pharmacy use.

An analysis of the University's health benefit costs follows:

University of Maine System Health Benefit Costs

FΥ	1984	\$	4,580,237
FΥ	1985	\$	5,489,521
FΥ	1986	\$	3,958,805*
FΥ	1987	\$	6,730,117
FY	1988	\$,	7,465,742
FY	1989	\$	9,747,674
FΥ	1990	\$:	10,681,476

* Changed from a premium based health policy to a cost reimbursement method which resulted in a one-time savings during the transition year.

<u>Dental Plans.</u> The state provides paid dental insurance for its employees and contributory coverage for their dependents. The University does not provide dental insurance benefits.

<u>Life Insurance.</u> The state and University offer the same paid basic life coverage of one times salary. Supplemental insurance is paid for by the employee in both places.

Leave. The leave benefits are very similar though not identical.

Tuition Waiver. The state provides tuition and fee refunds for advanced courses in fields that have prior supervisory approval.

The University provides a tuition waiver on a space available basis for up to two courses a semester. Spouses and dependent children who attend full-time are eligible for a waiver of 1/2 tuition.

Retirement. The state provides a defined benefit retirement plan. The employee contribution is 6.5% of base salary, the state contribution is 19.49%. (Approximately one-half of this amount is for the unfunded liability.) Forty-five University employees are still in this plan.

The bulk of the University professional employees are in TIAA/CREF, a defined contribution plan. Most of the classified employees are in the Non-Contributory Retirement Plan, a defined benefit plan. University professional employees contribute 4% of base salary and the University contributed 10%. The University contributed approximately 4% of salary to the Non-Contributory Retirement Plan.

All University employees in the Non-Contributory and TIAA/CREF plans are also covered by Social Security, to which they and the University contribute 7.65% of base salary.

Faculty Salaries

The Table below shows the significant advances made in the ranking of University of Maine faculty salaries since 1981. Referring back to the chart of Salary Increases, there is a direct correlation between the significant salary increases provided to faculty in FY 1988 and FY 1989 of 10.75% and 10.25% respectively with the jump in ranking below. Exhibit VI-A at the end of the chapter provides a more complete description of the University of Maine System's faculty ranking for the different levels of faculty status.

University of Maine System Faculty Salary Statistics

¹There were 49 reporting institutions - Alaska did not report.

²Based on using a Paasche index in which the distribution of faculty by rank at the University of Maine was used as a weight. This eliminates the distortion caused by variations in the distribution of faculty by rank at other institutions and therefore provides more comparable data.

Quality of Faculty

The quality of any college or university depends most heavily on the quality of its faculty. While support services and facilities are important, it is the faculty who do the essential work of the university in the classrooms, labs, and studios. Faculty are unlike other types of workers in most other industries because faculty are not only responsible for doing certain work, they are largely responsible for determining what the work is. A faculty member implements his or her own plan of work according to the dictates of the discipline in which that faculty member is an expert. Although university administrators have some oversight responsibility, they must defer to faculty expertise in many matters such as curriculum and teaching methodologies.

Because of this important inter-relationship between the quality of the faculty and the quality of the University of Maine System, the Commission hoped to determine whether changes in quality could be measured by some quantitative means, such as the number of PhD's at a given campus. However, most measures would require so many qualifiers as to limit their usefulness. The other consideration in determining the quality of the faculty is the type of work they do; whether administrative in nature, research, or strictly teaching. Each type of faculty plays an important role but each has to be evaluated according to different standards and measures.

The only measures of quality available to the Commission were the subjective assessments of the campus Presidents. Their responses indicated that the quality of faculty had improved at each of the campuses since the \$15 million down payment in FY 1987. Vacancies were easier to fill and more top choice candidates were

accepting. They also indicated that the University of Maine System had been able to retain its highest quality faculty. The reasons for the improvement was tied directly to the down payment. Besides competitive faculty salary, the equipment purchases, improving facilities, and faculty development programs provided more attractive work setting for faculty and improved faculty morale. The additional teaching positions added at some of the campuses also provided more reasonable workloads. However, the Presidents and faculty testifying before the Commission indicated that the recent budget reductions have adversely affected faculty morale.

Student/Faculty Ratios

The Table below shows that in general the student/faculty ratio declined as a result of the FY 1987 supplemental appropriation. Beginning in FY 1989, however, the ratio has begun to increase. In fact, the System ratio is almost at the level prior to the down payment.

Faculty Development Programs

One of the recommendations of the Visiting Committee was that a "program of faculty development be given encouragement, financial and otherwise." There was a significant increase in this area immediately following the \$15 million down payment. However, the 1990-1991 budget reductions seem to have taken their greatest toll in this area. Most of these programs are dependent on out-of-state travel which, as indicated in the analysis of the cuts at the campus in Chapter VI, usually was reduced to meet FY 1990 budget targets. It is very likely that similar reductions will be exercised in FY 1991.

Job Classification Program

In FY 1988, with \$2.7 million from the Legislature, the University of Maine System implemented a revised Job Classification Program. The Job Classification Program is used to determine the appropriate wage band assignments for all classified (hourly paid) positions within the University. The revised Job Classification Program resulted from a labor-management study involving the University, three collective bargaining units, and the advisory council for non-represented classified employees.

The study resulted in revised job descriptions for approximately 300 job titles, and revised wage band assignments for many jobs. The point-factor system which is used to determine a wage band assignment was extensively modified to reflect current University values, the diversity of work performed, and changes in how work is performed. This project was the first major overhaul of the Classification Program since it was developed in the late 1960's.

Implementation of the revised Program resulted in an overall wage increase of approximately 9.5% for the University's more than 2,000 classified employees. Wages following implementation were both more internally equitable and more competitive in the job market, improving the University's ability to recruit and retain well qualified employees.

Lay-Off Policies

Given the high percentage of the University's E&G budget comprised of compensation, the only way for the University to realize the significant budget reductions required to meet the FY 1991 portion of the \$9.6 million reduction was to lay off employees. The table below summarizes the lay-offs by type of personnel.

Reductions in FTE Personnel or Positions

	<u>Total</u>	Faculty	Professional	<u>Classified</u>
UM	97	28	33	36
UMA	8	3	5	0
UMF	6	4	0	2
UMFK	4	0	2	2
UMM	2	2	0	0
UMPI	5	1	3	1
USM	32	20	6	6
CO/SWS	<u> 6 </u>	_0	_3	_3
	160	58	52	50

The large number of lay-offs announced by the University of Maine System concerned many legislators, particularly with regard to the decision of which positions would be laid-off. The Commission asked the University to detail the process.

The System's first approach to reducing the number of employees was through normal attrition and turnover process. In addition, the University offered an early retirement incentive program to employees with at least 10 years service who were between 55 and 65 years old if they retired during the period April 1, 1990 to June 30, 1990. Academic year appointees (faculty) were allowed to take their retirement any time up to August 31, 1990. The incentive consisted of the following:

- two years of University-paid health insurance premiums for the retiree and any dependents;
- 50% of University-paid premiums thereafter until retiree reaches age 65;
- life insurance for two years;
- continuation of employee or dependent tuition waiver for two years.

Early retirees normally pay the full cost of health insurance for themselves and any dependents until they reach age 65, when the University pays the Medicare supplement premium for the retiree and one-half of the supplement premium for any dependent.

A total of 32 individuals took advantage of the incentive, 20 professionals (including 11 faculty) and 12 classified employees.

The remaining lay-offs were decided at the campus level and were guided by collective bargaining agreements. However, the Commission heard that the notification requirements had not been strictly followed. A union representative indicated that this resulted from a less than complete knowledge of the terms of the agreement by some administrators.

Administrators

The Commission reviewed the growth in all types of employees in After reviewing faculty (teaching University. professional (administrative and support), non-teaching), classified employees, it was clear that the largest growth occurred in the non-administrative professional employee category (see table This is primarily due to the ever-increasing federal and state regulations (mandating contracts on such activities as health disposal), increased technology safety and waste (computers), support for research and grant activity, and increased student services (counseling for non-traditional students, day care).

Conclusions and Recommendations

The largest portion of the appropriation increases of the 1988-1989 biennium went into badly needed salary increases. Since a university system is only as good as its people, this was an appropriate first priority. University of Maine System faculty salaries have improved dramatically in recent years. In Fiscal Year 1981, University of Maine faculty salaries were ranked 49th in the nation when compared to faculty salaries paid at the major public university in each of the 50 states. That ranking has improved to 31st in Fiscal Year 1990. Salaries for faculty and staff, while still below national averages, are at least competitive. Also included in the increases was the implementation of the revised job classification system which positively impacted employee morale. Consequently, the System has been better able to attract and retain highly qualified and talented faculty and staff.

The \$15 million down payment was used to supplement a number of areas other than compensation such as out-of-state travel and equipment purchases. However, these expenditures also contributed to improved faculty morale through expanded faculty development programs and improved working environments. At a number of the

campuses full-time faculty were added which further improved faculty working conditions and student/faculty ratios.

The Commission was presented with testimony and evidence that these improvements in morale have been seriously affected by the recent budget reductions. The budget reductions, as noted previously, hit hardest in travel budgets and equipment purchases, directly affecting faculty development programs and improvements in faculty equipment.

The Commission urges the University to maintain faculty salaries at nationally competitive levels.

Compensation represents more than 75% of total Educational and General expenditures, and is closer to 80% at some of the campuses. Given this sizable share of compensation related expenses, the budget reduction proposals necessitated that some of the reductions be realized through lay-offs. Despite an early retirement incentive program, the University was forced to lay-off 160 full-time equivalent positions. These lay-offs were implemented according to collective bargaining agreements. However, the Commission did hear testimony that some of the problems in the lay-off process resulted from a less than complete knowledge of the contracts by some administrators.

The Commission recommends that administrators within the University System become familiar with the collective bargaining contract provisions, particularly as they apply to policies regarding notification of lay-offs.

VII. STUDENT LIFE AND STUDENT COSTS

This chapter looks at the effect of the recent changes in the levels of state funding to the University of Maine System from the Student's perspective. The changes in funding have affected the quality of student life in a number of areas, such as the number of academic offerings and student faculty ratios. This chapter also looks at the quality of student life in terms of its cost to the University student in tuition and fees and the availability of financial aid.

Academic Offerings

An important measure of the quality of student life is the number and quality of academic program offerings. The University of Maine System has a continuing and effective program review process in place with about forty to fifty program reviews being conducted each year. These reviews, utilizing outside consultants, have led to program modifications and improvements. There have even been some programs eliminated. Exhibit VII-A at the end of this chapter provides a listing of the programs added or eliminated since FY 1985. Eight programs have been eliminated since FY 1985, about a quarter of the number added during that same period.

An issue related to the number and quality of academic programs is the ability of students to transfer credits from one campus or The ability of students to transfer credits program to another. advanced higher or specific academic access to more programs. However, due to differences in requirements between programs, this transfer is not campuses and always The University of Maine System has been working on accomplished. improving this transfers of credits.

Student Costs

The cost to a Maine resident of a year at one of the University of Maine System campuses will average \$8,149 in FY 1991. This has increased from \$6,083 for FY 1986. The cost to out-of-state students is considerably higher with the major difference being the difference in tuition rates. Non-resident rates are set at between 2.4 and 2.8 times the in-state rate. In FY 1991, the differential was \$3,637.

Exhibit VII-B at the end of this chapter summarizes the cost of an undergraduate University of Maine System education for in-state, on-campus students from FY 1986 to FY 1991. The burden borne by the students and their families decreased from almost 60% just prior to the 1987 down payment to less than 52% in the current fiscal year. The portion contributed by the state increased from less than 36% to more than 43% over this same period. The \$15 million down payment shifted the burden significantly from the students to the state in one year. In the years immediately following, the state's portion of these costs continued to grow, reaching its highest point in FY 1989, conversely, the student's share reached its lowest point in that same year.

The budget reductions of the 1990-1991 biennium have reversed the trend toward lessening the financial burden on the student and the family. Since FY 1986, the average annual growth of the state's share of in-state, undergraduate per student cost was 13.31%, while the growth in the student's share only averaged 6.02% annually for the same period. However, the growth between FY 1989 and FY 1990 and between FY 1990 and FY 1991 was 2.99% and 5.64%, respectively, for the state's share, while the student's share grew at 6.76% and 8.89%, respectively.

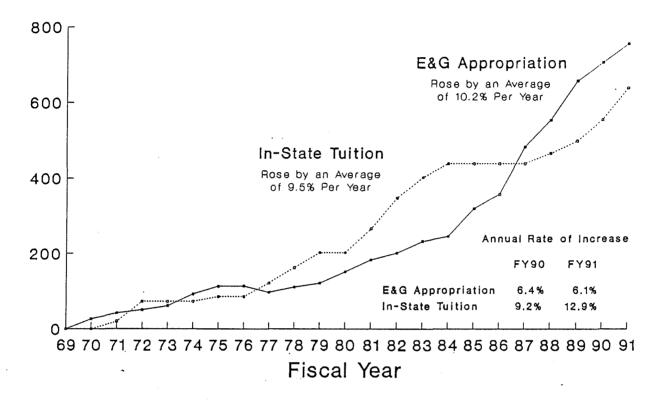

Tuition and Fees

The Board of Trustees establishes tuition rates, normally charged by credit hour, for in-state and out-of-state undergraduate, graduate, and law students. Prior to the recent increases in tuition rates, the board had a long term policy of setting total tuition and fee revenue to equal one-third of the System's total Educational and General budget. Some current guidelines include setting out-of-state tuition at a rate between 2.4 and 2.8 times the in-state rate and setting tuition charges for graduate students at least 130% of the established rate for undergraduates at the University of Maine and the University of Southern Maine. Exhibit VII-C provides the major annual student charges for 1990-91.

Although low when compared to New England (see Exhibit VII-D), University of Maine System tuition rates make our campuses among the more expensive public institutions of higher education in the United States. Seventy-five percent of like institutions charge less than the UMS average for both in-state and out-of-state students.

As demonstrated by the graph at the top of the next page, the growth in UMS average tuition rates was approximately the same as the growth in the E&G state appropriation from FY 1969 to FY 1976. Beginning in FY 1977 tuition rates increased faster than the E&G appropriation. This was necessary to make up for the appropriation reduction of FY 1977 and subsequent years of low growth in the appropriation. Beginning in FY 1985, the growth rate for the E&G state appropriation increased substantially. By FY 1987, the year \$15 million supplemental appropriation, the cumulative of the percentage growth in the E&G appropriation exceeded the growth in tuition and has stayed higher than tuition to the present time. Tuition remained constant for the four years from FY 1984 to FY However, the rate of increase for tuition for the 1990-1991 biennium exceeded that of the state appropriation.

UNIVERSITY OF MAINE SYSTEM CUMULATIVE % INCREASE IN E&G APPROPRIATION AND AVERAGE TUITION

Student Enrollment

The Table below details the growth of student enrollment at each of the campuses. From 1986 to 1990 enrollment levels for the University System have increased by more than 3,300 students.

Opening Fall FTE Enrollment* (Fall 1986-Fall 1990)

^{*}The formula for calculating Fall FTE is as follows:
Fall
Fall
Undergraduate Credit Hrs + Professional (Law) Credit Hrs + Graduate Credit Hrs = Fall
15
9
FTE

Admission Standards

University and college admission criteria are determined in large part by the mission of an institution. Acceptance rates (the number of students accepted for admission compared to the number of applications) reflect both the admission criteria and the size and quality of the pool of students who apply for admission. interpreting acceptance rates, one must keep in mind institution's mission and the size and quality of the admission pool. Providing access is a first priority on some University of Maine System campuses, while increasing selectivity, especially in certain programs, is foremost on others. For instance, the University of Maine at Augusta aims for a 100% acceptance rate, while the University of Maine has been trying to raise its standards and, thereby, reduce the acceptance rate for its baccalaureate programs.

Exhibit VII-E at the end of this chapter details the acceptance and enrollment rates for each campus.

Technology

The Commission invited the University to make a presentation before the Commission to justify the recent expenditures for the computer/communication project at the Orono campus. This was highlighted as a concern by the students and some legislators who were not able to readily see the impact of the \$3.5 million allocated for this purpose from the latest General Fund bond issue. Students did not see any improvement in the availability of personal computers. The lines for access to these computers indicates that there are still some improvements to be made.

The University's presentation included several faculty members and directors of the project at the Orono campus. They pointed out the long term benefits that will be derived from this investment. It also became clear that something had to be done in this area.

The University of Southern Maine also received some bond issue funds which were allocated to purchase computer equipment for general access. Due to the continually evolving nature of computer technology and the growing demand for use, the University of Southern Maine proposed a technology fee to dedicate \$2 per credit hour (in excess of \$350,000 annually) to improving the University of Southern Maine student computer resources.

Financial Aid

Federal support for student financial aid has remained virtually steady from FY 1985 to FY 1989. University support for the same period has grown at an average annual rate of 9.5%. This is due to the priority that the Trustees place on providing financial resources for needy students, especially in times when tuition is increasing at a faster rate than inflation (See Exhibit VII-F).

Exhibit VII-G provides a breakdown of financial aid by type: i.e., scholarships and waivers, work-study, and loans. Work-study and loans have increased as a percentage of the total; while scholarships and waivers have declined from 1985 to 1990.

Conclusions and Recommendations

Tuition and the University's Educational and General appropriations have grown at varying rates since the 1968 merger, but in the last two years tuition has been growing faster than the state appropriation. The current total annual cost of an education for all in-state on-campus undergraduate student is \$15,730 per student of which the student and family pay \$8,149 or 51.8%. This cost has increased from the 1986 level of \$10,192 for total cost per student with the student and family paying \$6,083 or 59.7% (just prior to the \$15 million down payment).

Federal support for student financial aid has remained virtually steady from Fiscal Year 1985 to 1989, while University support for the same period has grown at an average annual rate of 9.5%. This is due to the priority that the Trustees place on providing financial resources for needy students, especially in times when tuition is increasing at a faster rate than inflation. Despite increases in support from University sources and the State, student aid as a share of the Educational and General budget has been steadily declining. The Commission was also concerned with the make-up of the financial aid to students which demonstrated an increase in the reliance on loans versus scholarships and grants.

The decline in financial aid, increasing tuition rates in excess of inflation, and a heavier reliance on loans within student financial aid packages place a greater burden for meeting education costs on the student and family. The end result is that fewer students will be financially capable of attending the University.

The Commission supports and commends the Trustees for providing increased financial aid to needy Maine students during periods of increased tuition costs.

VIII. FACILITIES AND BORROWING

This chapter discusses several aspects of the University of Maine System related to its physical plant and its funding. The growth in the University, the increase in the percentage of space used for administration versus instruction and other purposes, maintenance issues, the method of funding both General Fund and University bonding and other means of funding are reviewed here.

Size of Plant

The University of Maine System is a major landowner and building manager, with 1,294 developed acres and 6.9 million square feet of facilities in use. Replacement value of all University land and facilities currently, exceeds \$664 million. The table below highlights the growth in the value of the University's plant since 1986.

Plant Replacement Value (in millions)

1986	\$513.1
1987	\$543.2
1988	\$567.5
1989	\$609.7
1990	\$664.9

Administrative Space

One of the concerns often expressed by Legislators is the apparent increase in the amount of space used for administration versus other uses. The Commission analyzed a report on the use of assignable space, which summarized the assignable area for all departments and functions by room use category. The Table below separates out that percentage of area assigned to "institutional support." This information was not available for prior years, consequently, trends could not be analyzed.

1989 Administrative Space vs. Total Office Facilities

	Area in Square	Feet	
	Institutional Support	Total	
<u>Campus</u>	<u>Area</u>	<u>Area</u>	<u>Percentage</u>
T T T T	70.000	455 405

USM	24,181	129,300	18.7
CO/SWS and MPBN	13,985	26,526	52.7

State Bond Issues

Earlier in this report in Chapter III, the support of the University of Maine System through the use of General Fund bond issues was mentioned. Exhibit VIII-A provides a summary of the projects funded by the three latest bond issues, the \$16,500,000 bond issue approved by the 111th Legislature, the \$7,700,000 bond issue approved by the 112th Legislature, and the \$36,800,000 bond issue approved by the 113th Legislature.

University Bonding

The 1987-1988 Report of the Joint Standing Committee on Audit and Program Review on the University of Maine System (UMS) included a recommendation that the UMS be granted tax-exempt borrowing authority. Previously, there has been some uncertainty with regard to the tax status of UMS borrowing in anticipation of assured revenues. The Audit and Program Review Committee clearly distinguished that UMS should have tax-exempt borrowing authority, but not bonding authority.

UMS, with the advice of counsel, interpreted the statutory changes to permit bonding by UMS. The Joint Standing Committee on Appropriations and Financial Affairs during the First Regular Session of the 114th Legislature sought to clarify and resolve this in interpretation. The Appropriations Committee was concerned about unlimited bonding authority for UMS for a number of Although the State of Maine is not legally or morally obligated to honor UMS bonds in the case of default, there is an "implied" moral obligation given the size of State Government's commitment to UMS. The major bond rating agencies consider the of University debt in their reviews of state Therefore, the Appropriations Committee felt that University borrowing without limit could negatively affect the state's credit The Appropriations Committee was also concerned with the lack of legislative oversight in UMS bonding, as growth in UMS plant could eventually affect the levels of General Fund appropriations required by UMS.

The Appropriations Committee decided to let the interpretation allowing bonding for UMS to stand but to establish a \$18 million limit on the amount of outstanding bonds. UMS had originally proposed \$25 million as the cap. The Appropriations Committee also added a legislative review requirement. No borrowing could be finalized until reviewed by the Appropriations Committee; UMS would have to submit information on the projects to be funded by the borrowing to the Office of Fiscal and Program Review at least 60 days in advance of the closing on the projects.

Lewiston/Auburn Facility

The Lewiston/Auburn (LA) college is a recent initiative to expand access to the university programs affiliated with the University of Southern Maine (USM), as mentioned earlier in Chapter IV. The short-term solution to providing a presence in the LA area was to lease a facility and to renovate it to meet the USM's requirements. Due to the taxable status of the Lessor in this case, USM is paying approximately \$300,000 more than it would have to pay if it had purchased the facility. The estimated cost to purchase the building is approximately \$5.2 million.

Pride and Promise Campaign

Early in 1989, the Board of Trustees authorized a capital campaign, the first in the country to be launched as a system-wide venture. The Pride and Promise Campaign has two aims, Quality and Accessibility, which are the basis for the System's capital campaign, which seeks at least \$65 million from private sources over a five-year period. The \$65 million is targeted for seven categories of need:

- \$15 million to create endowed faculty positions: chairs, professorships and fellowships;
- \$10 million to endow scholarships for undergraduate students and fellowships for graduate students;
- \$11.5 million to underwrite academic program support including library acquisitions, equipment, curriculum development, and research;
- \$10.5 million to renovate and construct facilities throughout the System, thus supplementing bond-issue funds;
- \$2 million to enhance public service programming in the humanities and the arts;
- \$1 million to endow a new Fund for Multi-Campus Initiatives that will provide seed money for promising cooperative ventures; and
- \$15 million through separate campus-based annual fund programs to strengthen a variety of academic areas.

Maintenance

Currently, each campus budgets a certain amount for annual maintenance costs. These funds are used to maintain all aspects of physical plant activity on the various campuses. By system-wide policy, each campus has established a non-lapsing maintenance reserve account which can receive funds in two ways:

- any unexpended balance from a maintenance account is placed in its entirety into the campus maintenance reserve account; and
- the system makes use of a concept referred to as "incentive budgeting" (see Chapter V). Under the incentive budgeting process, any unexpended balance from a non-maintenance account is divided into 80% and 20% portions. The 80% is, in fact, the portion used for incentive budgeting; the campus presidents are allowed to use this money at their discretion for unfunded educational or administrative purposes on their campus. The other 20% is designated for deposit into the campus maintenance reserve account.

Maintenance reserve accounts are used to provide funds for anticipated future expenditures that occur at intervals longer than one fiscal year. Theoretically, a maintenance reserve system would allow campuses to "put away" a certain sum of money every year towards the anticipated repair or replacement of a portion of campus facilities.

The Committee on Audit and Program Review, as part of its 1987-88 review of the University determined that 1.5% of the total estimated replacement value on all buildings should be budgeted for maintenance. The Committee recommended that this amount be budgeted annually for maintenance and to avoid the harmful and more expensive practice of deferred maintenance.

In FY 1991, the University of Maine System is still only able to fund about one-half of the recommended amount.

Conclusions and Recommendations

The increase in state funding has been used to leverage increases in private support. The Pride and Promise Campaign, a private fund raising program intended to supplement recent bond issues is possible in large measure because the public perceives the University of Maine System as a quality system worth supporting.

While the Capital Campaign is a much needed and justified capital program, the Commission urges the University to incorporate capital renewal and modernization of existing buildings as a priority and alternative in its capital planning.

University is able to fund only about one-half the maintenance expenditure level as recommended by the Joint Standing Committee on Audit and Program Review. The March 1988 Audit and Program Review report recommended budgeting maintenance at 1.5% of estimated building value. The lack of adequate funding for maintenance results in the harmful and more expensive practice of This practice results in additional future deferred maintenance. costs when relatively simple maintenance projects become major ones due to delaying early corrective action. It also places students, faculty, and employees at risk if safety related projects are To address this issue, the Trustees have requested delayed. increased Part II appropriation support of \$1.0 million in Fiscal Year 1992 and an additional \$1.5 million in Fiscal Year 1993 to substantially address ongoing maintenance.

The Commission supports the Trustees supplemental request and encourages the University to continue to increase maintenance budgets until they reach the 1.5% goal and address deferred maintenance issues as funding becomes available.

IX. AUXILIARY ENTERPRISES, RESEARCH AND OTHER FUNDING

The previous chapters of this report have dealt with the Educational and General (E&G) Budget of the University of Maine System (UMS) and the Maine Public Broadcasting Network (MPBN), the two recipients of state General Fund appropriations. UMS also receives state funds through contracts with state agencies, which combined with other funding from the General Fund represent a substantial commitment of state resources. Given the extent of this commitment, the Commission decided to look at all UMS funding sources, even though the state may have no legal control over the use of these funds.

Auxiliary Enterprises

Auxiliary Enterprises are self-supporting entities. The most noteable examples of these are dormitories, dining halls and campus bookstores. The Commission analyzed these auxiliary enterprises at two of the largest campuses, the University of Maine (UM) and the University of Southern Maine (USM). The Tables below summarize the actual revenue and expenses and the ending balances of the Dining and Residence accounts and the bookstore accounts at UM and USM.

Auxiliary Enterprises - Growth of Revenue vs Expense University of Maine

FY 86	Revenue	<u>Expense</u>	<u>Net</u>	<u>Balance</u>
Dining & Residence Bookstore	15,108,941 3,320,221	15,110,488 3,365,500	(1,547) (45,279)	339,403 728,107

FY 88 Dining & Residence Bookstore	16,449,202 3,834,015	15,770,543 3,675,903	678,659 159,112	1,004,270 397,172
FY 89 Dining & Residence Bookstore	19,018,743 4,703,532	19,352,480 4,495,022	(333,737) 208,510	127,145 570,654
FY 90 Dining & Residence Bookstore	19,774,575 5,450,592	19,232,881 5,280,340	541,694 170,252	754,839 457,654

Auxiliary Enterprises - Growth of Revenue vs Expense University of Southern Maine

FY 86	Revenue	Expense	<u>Net</u>	<u>Balance</u>
Dining & Residence Bookstore	3,154,055 1,473,056	3,142,536 1,424,808	11,519 48,248	162,376 65,872
FY 87 Dining & Residence Bookstore	3,434,376 1,620,200	3,476,475 1,564,224	(42,099) 55,976	(29,723) 121,848
FY 88 Dining & Residence Bookstore	3,744,240 1,773,457	3,591,105 1,728,393	153,135 45,064	123,412 86,658
FY 89 Dining & Residence Bookstore	4,604,166 2,127,090	4,723,750 1,990,597	(119,584) 136,493	3,828 286,962
FY 90 Dining & Residence	5,300,330 2,482,040	5,295,491 2,350,350	4,839 131,690	8,667 418,652

Another auxiliary enterprise account at UM which the Commission reviewed was the MicroComputer Resource Center (MRC). This entity sells computers to students. MRC has major contracts with Apple, IBM and Zenith. The "educational discount" is around 45% off list and MRC marks everything up 10%. It also charges a stepped shipping rate of \$35 per system, \$10 per monitor and \$5 per printer. Before June 1990, MRC charged different rates for the three vendors and tried to "average" the shipping and handling in the markups.

MRC financially was mixed with other computer support services. This made it difficult to identify costs specific to the MRC. As of July 1, 1990 the MRC sales and service have been separated along with the price changes so they can be carefully monitored and appropriately adjusted.

UM continues to support the MRC as a service that happens to offer computers for sale, not a retail operation. However, with help from the Department of Internal Audit, UM reviewed and reorganized the financial end of this service as if it were a not-for-profit business.

Research, Grants and Contracts

Grants and contracts are an important factor in the amount of research conducted by the University of Maine System. Total revenues realized for FY 1989 were \$40.5 million, an increase of \$6 million (17.6%) over the previous year's revenue. Even though the total revenues have increased in grants and contracts, the amount received from federal agencies has decreased as a percentage of total revenues. In FY 1985, federal revenue represented 54%,

whereas in FY 1989 only 40% of total revenue was received from federal agencies. Private funding and University contributions to grants and contracts activity has almost doubled over the past five years.

Exhibit IX-A at the end of this chapter summarizes the grants contracts revenue by source, and Exhibit IX-B provides a breakdown of state contracts with the University by state agency. In 1989, the State contributed 13% of the total grants and contracts Of this amount, the Department of Education and Cultural contributed 24% or approximately \$1,238,000. Services Department of Human Services accounted for over 20% or \$1,051,000. the Department of Agriculture Executive Department and contributed the next largest portions or approximately 11% each.

Although the amount of grants and contracts revenue has improved in the past two years indicating additional support for research at the University of Maine System, a 1988-89 study conducted by a faculty committee of the University of Maine (UM) that examined the "environment for research" on the Orono campus indicated otherwise. The faculty committee compared the status of research at UM with other New England Land Grant Universities. A downward trend in the amount of sponsored research was discovered. UM lagged behind the other New England Land Grant Universities in terms of dollars of activities. This faculty committee, stressing Visiting Committee recommendation that UM be strengthened as a research and doctoral institution, recommended a greater commitment to research.

President's Discretionary Accounts

The President's Discretionary Account permits a campus to make University expenditures which have not been accommodated in the campus operating budget. It consists of funds not appropriated by the Legislature nor budgeted by Trustees. More than 94% of these funds come from gifts.

Expenditures may be made up to the amount of the account balance. Because the funds arise from private, rather than public sources, Presidents are allowed greater discretion in the use of the funds than in expenditures of E&G monies. All uses must be for official University purposes, however, and the list of expenditures will be reviewed each year by the Chancellor, and discussed by the Chancellor with the Finance Committee of the Board.

During early part of 1989, several legislators reacted negatively to some of the expenditures from the University of Maine's Discretionary Account.

Endowment

The University of Maine System, as with most public universities, is not very heavily reliant on endowment income. In Chapter II, Ratio #13 showed that endowment income has averaged approximately 0.6% of the E&G budget since FY 1980. In FY 1990, endowment income totaled \$1,707,387, up from \$1,359,219 in FY 1989. A large portion of this endowment income is used for student financial aid.

Athletics

While the Commission had hoped to explore in-depth the complex and sometimes controversial subject of athletics, there was not sufficient time to adequately cover this issue. The amount of Educational and General support net of revenue from athletics varies from campus to campus. UM is certainly the most visible of the athletics programs. UM as a Division I-AA participant is committed to a given level of financial commitment.

Conclusions and Recommendations

The University of Maine has had a weak track record of attracting research funding when compared to other institutions in New England. Research benefits not only the University system through increased funding and prestige, but it also benefits the general public through studies of environmental problems, agriculture, forestry, fishing, and other areas requiring attention as a result of federal mandates. However, the University of Maine is trying harder to increase external support of research as evidenced in its increased submission of proposals, increased faculty involvement and increased awards. From Fiscal Year 1989 to Fiscal Year 1990 there were increases of 23% in proposals submitted, 14% more faculty involved, 29% more dollars requested, 30% more awards approved and 21% more funds received.

The Commission applauds the University of Maine for the growth in the research area during the past two years and encourages it to continue with this progress.

The Commission had a limited amount of time to review a number of other complex and sometimes controversial funding issues such as athletics, auxiliary enterprises, endowments and discretionary accounts. Although the state may have no statutory control over the use of many of these funds and accounts, the Governor, Legislators, and the general public are logically concerned with the proper use of all University of Maine System funds given the size of the state's financial commitment to the University.

The Commission urges the University of Maine System to be aware of this public scrutiny of all university funds and to avoid expenditures which might be perceived as improper. This will be particularly important in the trying financial times to come. Academics should be given highest priority in the use of any funding.

The University should also continually evaluate the efficiency and the charges of the self-supporting, auxiliary enterprises to insure the efficient use of student dollars. If auxiliary enterprises can not be self-supporting, contracting with private firms should be considered.

Given past criticisms of the financial commitment to athletics at the University of Maine and the current budgetary problems, it might be prudent to scale down the level of competition and cost. Thus, the Commission recommends that the President of the University of Maine seek to negotiate with the Presidents of the other comparable Universities in New England and the Middle Atlantic States to form a new Yankee Conference in which athletic scholarships, coaching, staffs and other costs be limited.

X. PENDING FUNDING PROPOSALS

While this Commission was initially established to study the effect of increased state spending on the University of Maine System, it has been the effects of the budget reductions of this current biennium, proposed additional cuts for 1990-91, and the Governor's recommended budget targets for the 1992-1993 biennium that have moved to the forefront in the minds and the concerns of Commission members and all those associated with the University of Maine System. Therefore, this chapter briefly reviews the current economic outlook for the state, the effect of proposed additional cuts in 1990-91, and the request versus recommended funding levels for the upcoming 1992-1993 biennium.

Economic Outlook

There has been a great deal of uncertainty surrounding the health of the Maine economy. In early 1990, the 2nd Regular Session of the 114th Legislature was faced with the task of overcoming a \$210 million projected General Fund revenue shortfall for the 1990-1991 biennium. This task was accomplished with the effect on the University of Maine System being a \$9.6 million reduction in the amounts originally appropriated to it during the 1st Regular Session of the 114th Legislature.

Actual General Fund revenues had decreased by 3.6% from FY 1989 to FY 1990 and FY 1991 budgeted revenue had been optimistically projected for 13.75% growth over FY 1990 levels. At a November 30, 1990 press conference, the Governor announced that revenues again would be less than projected. The estimated shortfall for the remainder of FY 1991 was estimated to be in excess of \$100 million. legislative action to the contrary, the Governor indicated that a 15% curtailment in the January, 1991 to June, 1991 Consequently, allotments to state agencies would be required. payments to the University would be reduced by an additional \$11,132,425 in 1990-91 for the Educational and General Budget and the Maine Public Broadcasting Network. In addition, new target levels were established for the 1992-1993 biennium which result in further cuts from the amounts originally appropriated for FY 1991 during the 1st Regular Session of the 114th Legislature.

These proposed budget reductions are more significant than the cuts of FY 1977, when the University's appropriation was reduced by \$2.8 million or 7.6%. The currently proposed reductions are actual reductions, rather than reductions in increases. The proposed FY 1991 targets will reduce the University's appropriation by \$2.5 million or 1.8% from the FY 1990 appropriation. However, this reduction, unlike 1977, would be imposed in the middle of an operational year which effectively doubles the impact. An additional \$1.6 million or 1.2% reduction from FY 1991 targets is being proposed for FY 1992 funding.

When compared to the original appropriation to the University of Maine System for FY 1991 of the 1st Regular Session of the 114th Legislature, these reductions are even more dramatic. The FY 1991 target represents a \$17.7 million or 11.4% reduction from the original FY 1991 appropriation. The FY 1992 target is a \$19.3 million or 12.5% reduction from the original FY 1991 appropriation. Even the target for FY 1993 is \$10.8 million below the original FY 1991 appropriation. Exhibit X-A at the end of this chapter graphs the effect of the recent reductions and the proposed on the level of the University's Educational and General appropriation targets.

1992-1993 Biennium Request vs Proposed Targets

The Board of Trustees' finalized budget request to the Governor and the Legislature for the 1992-1993 biennium considered the current economic situation facing the State. The institutions of the University of Maine System have agreed to the most austere financial plan proposed in the last ten years. Exhibit X-B at the end of this chapter details the System's requests and the recommended amounts for the last ten years.

Some of the members of the Board had expressed dissenting opinions on this austere budget request. They felt that it would be more appropriate to show exactly what the needs of the System are for the next biennium and let the Governor and the Legislature at least be aware of the full needs, when they make their decisions. Although the Governor and the Legislature have been generous in recent years with respect to funding the University of Maine System, the University of Maine System's requests have not been fully funded (See Exhibit X-B).

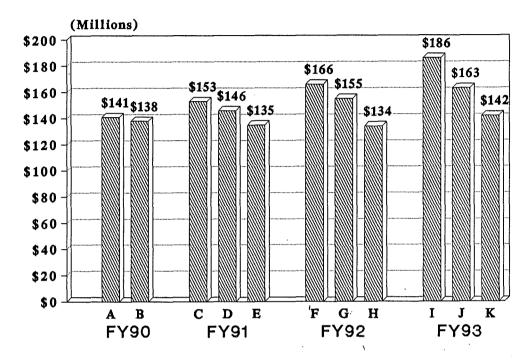

While there is the possibility that even the most austere of requests might be further reduced by the Governor and the Legislature, the majority of the Trustees felt that it would appear insensitive to recommend a normal budget request given the bleak economic outlook and the drastic cuts which loom ahead for many state agencies. An overview to the 1992-1993 Financial Plan for the University of Maine System is provided in Exhibit X-C at the end of this chapter.

Conclusions and Recommendations

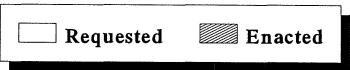

Recognizing the current economic conditions, the University understandably shared in the belt-tightening that was necessary. However, it is important that the progress made in recent years not be lost. The deappropriation of the current biennium and proposed future reductions threaten the progress that has been made in creating a public university system to serve the people of Maine as we move into the twenty-first century.

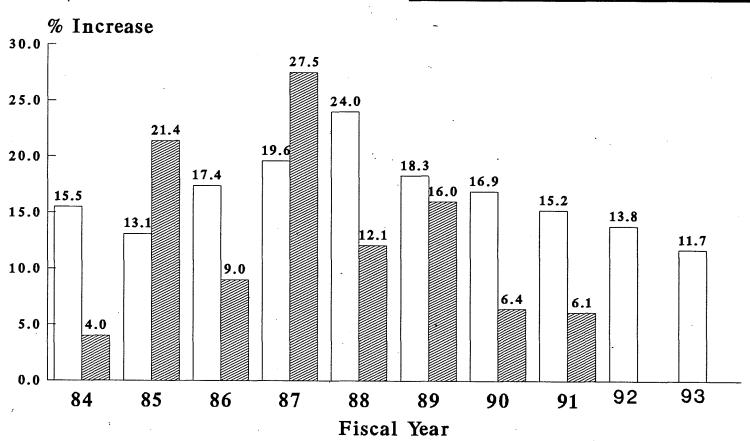

The Commission recommends that the University of Maine System receive a high priority in any budget deliberations. If additional reductions become necessary due to State economic conditions, it is the opinion of the Commission that the number of programs and/or access to those programs will have to be reduced or eliminated to preserve the quality of remaining mission-related programs.

• Student Financial Aid	1.0	1.0	
• Deferred Maintenance	_1.0	1.5	
Total New Funds	<u>\$23.7</u>	<u>\$22.9</u>	

UNIVERSITY OF MAINE SYSTEM 1992-1993 BIENNIUM FINANCIAL PLAN OVERVIEW E&G FINANCIAL PLAN

PLAN OVERVIEW

COMPENSATION

In 1989 the state of Maine signed a 3-year contract with its employee unions, for the first time extending a collective bargaining agreement beyond the end of the biennium. Following this pattern, the University System made a similar agreement, coincidentally for the same overall percentage increase 7%. (State employees also receive longevity/merit increases not subject to negotiations). The biennium appropriation request contains funds for fulfilling the third year of the contract, and for funding salary levels yet to be negotiated for the second year of the biennium. Also included in the request are increases in employee benefits (which rose by 15% last year) and funds for certain retiree benefits, principally health insurance.

ACADEMIC PROGRAMS

The Biennium Plan reflects the four cornerstones of the University of Maine System Goals Statement: (1) "commitment to fulfill its mission of teaching, research, and public service by serving the state of Maine, the New England region, and the nation with excellence, diversity, and common purpose"; (2) "dedication to expand educational opportunities, especially for Maine citizens, encouraging all who seek learning to achieve their potential through full participation in the University System"; (3) "recognition that we live in a diverse nation that is part of a pluralistic, global society..."; and (4) "determination to enhance the quality of existing programs and, where appropriate, to set new directions and add new programs and services in order to respond to a rapidly changing world."

In light of the current fiscal strictures in the state, the academic programs portion of the Biennium Plan selects from the on-going and targeted goals of the Goals Statement the following categories for support: (1) K-12/UMS Partnerships and improvement of teacher education, supported by \$800,000 in the first year of the biennium and an additional \$1,000,000 in the second; (2) improving the quality of undergraduate education, in order to move toward delivery of higher education of the highest possible quality available to all Maine citizens, with requests of \$1,410,000 in the first year and an additional \$1,790,000 in the second year to provide multicultural programming, to support enhancement and expansion of honors programs, and to improve introductory courses and academic support services; 3)

PLAN OVERVIEW

research and graduate study, in order to move Maine up from the ranking of fiftieth in the nation in State support of research and toward the goal for research and graduate study recommended by the 1986 Report of the Visiting Committee, with requests of \$550,000 in the first year and an additional \$500,000 in the second, and in addition requests of \$740,000 in the first year and an additional \$710,000 in the second year for a special initiative in Marine Studies at the University of Maine System in response to a recognized vital need of the State; and (4) further advances in the library automation system, with a request of \$500,000 in the first year in order to enhance the URSUS system by adding journal indices.

INFLATION

Every year the cost to buy goods and services increases for all individuals and organizations but Universities and colleges often face unique situations where inflationary pressures outpace the average inflation rate. Library periodical costs for example are increasing at a rate of 20% per year. The August 13, 1990 Merrill Lynch Market Letter notes that overall inflation in the U.S. is likely to increase to 6% because of higher oil prices. If fuel oil prices stabilize at current (September '90) rates and future consumption and price changes follow traditional seasonal cycles, the increase in our E&G energy costs in the current year (FY91) will be \$600,000 over last year. The University's request includes \$1.0 million in the first year of the biennium to cover projected increased oil and electricity costs. The University construction program approved by Maine voters in recent years is beginning to bring important new facilities to the campuses. Despite their efficient design, the new buildings still require operating and maintenance expenditures, adding to already heavily taxed campus budgets. Included in the inflation figure are funds which cover the cost of heating, lighting, cleaning and maintaining the additional E&G space added on campuses since the last biennium request (\$800,000 in FY92 and \$700,000 in FY93). The operation and maintenance for any new buildings from other than bond issues will be provided from ongoing budgets.

STUDENT FINANCIAL AID

Increased student financial aid has three primary objectives: to help students meet the increased cost of attendance, to compensate in part the reduced Federal support, and to reduce the loan burden on graduating students. Due to inflation student costs have and will continue to increase. Campus based aid programs from the

UNIVERSITY OF MAINE SYSTEM 1992-1993 BIENNIUM FINANCIAL PLAN OVERVIEW E&G FINANCIAL PLAN PLAN OVERVIEW

Federal Government have remained relatively stable, but are costing the institutions more because the Federal Government is requiring increased matching contributions. Prior to FY90, the Federal Government did not require institutions to match the Supplemental Education Opportunity Grant Program (SEOG), a program providing needy students grant assistance. Beginning in FY92 a 15% match requirement must be provided from institutional funds. This, coupled with an increase in the College Work-Study institutional match requirement (from 20% to 30%) results in increased institutional costs of about \$1.0 million in FY92. In FY93 an additional \$1.0 million of student financial aid is provided to reduce student reliance on student loans. (At UM, the average graduating senior leaves the institution owing over \$7,000).

DEFERRED MAINTENANCE

Limited budgets in recent years, and new statutory mandates, have reduced sharply the funds available for routine maintenance work on campus buildings. A survey by the Audit and Program Review committee concluded that the University System average of 0.75% of building value spent on maintenance was approximately half of the accepted national guidelines. The biennium plan would help campuses close this gap and protect the investment the state has made in University E&G buildings.

^{*} The biennium total is two times the first year (since it carries forward into the second year) plus the second year.

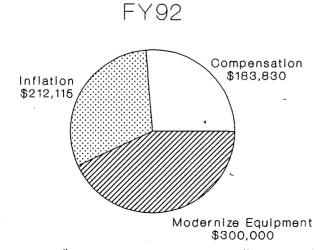

UNIVERSITY OF MAINE SYSTEM 1992-1993 BIENNIUM FINANCIAL PLAN OVERVIEW MPBN FINANCIAL PLAN

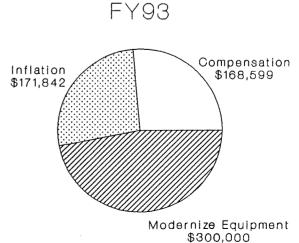

MPBN's Biennium Plan is based on the same funding factors for compensation, inflation and energy as in the University of Maine System E&G Biennium Plan.

The single highest priority (and only request) for new or expanded program funding included in the MPBN Biennium Plan is a capital equipment modernization plan to be phased in over four years. The electronic physical plant is in desperate need of modernization. MPBN has a current capital investment in equipment of \$7,660,000 of which \$5,052,000 has been depreciated. Without continuing attention to the equipment replacement needs of the network, the ability to produce local radio and television programming will be hampered. Without attention to the transmission system, reliability will continue to decline and the Maine audience will not be served. The plan includes \$300,000 in FY92 and an additional \$300,000 in FY93 to establish a pool of funds to be used for this purpose.
