# 2004 Silvicultural Activities Report

### including Annual Report on Clearcutting and Precommercial Activities

Compiled from the 2004 Landowner Reports and other survey instruments. Data collected under the provisions of Title 12 MRSA §8885 and §8878-A

Published: October 27, 2005

#### **Report Highlights**

#### **Harvesting and Land Use Changes**

- 507,899 acres were harvested in 2004, a 1% decrease from 511,416 acres in 2003.
- 481,153 acres were partially harvested in 2004, no significant change from 481,661 acres in 2003.
- The number of harvests reported increased 20% from 4,756 to 5,713 harvests.

#### Clearcutting:

- 1. The total area clearcut decreased, from 24,021 acres in 2003 to 18,779 acres in 2004. Clearcutting amounts to less than 5% of total harvested acres.
- 2. Landowners owning more than 100,000 acres in Maine created 90% of all clearcuts (16,963 acres).
- 3. Average clearcut size in 2004 was 20 acres. Landowners owning more than 100,000 acres had an average clearcut size of 27 acres. Landowners owning less than 100,000 acres had an average clearcut size of 13 acres. Three clearcuts larger than 75 acres were created in 2004.
- 4. The primary silvicultural reasons for clearcutting reported by large landowners were: (a) Removal of stands that, if partially harvested according to accepted silvicultural practice, are at high risk for windthrow due to factors such as soils, rooting depth, crown ratio or stem quality; and (b) For areas where the retention of the residual overstory trees were at high risk of windthrow.

#### Land Use Changes:

Harvesting to convert land from forest management to some other land use increased 39% from 5,734 acres in 2003 to 7,967 acres in 2004.

#### Precommercial Silvicultural Activities

#### **Herbicide Use:**

- For site preparation decreased 75%, from 1,093 acres in 2003 to 268 acres in 2004.
- To release crop trees from competing vegetation decreased 30%, from 18,663 acres in 2003 to 13,152 acres in 2004.

#### **Timber Stand Improvement (TSI):**

Precommercial thinning of young stands with spacing saws decreased 26%, from 26,894 acres in 2003 to 19,871 acres in 2004. 95% of this activity was done by landowners owning more than 100,000 acres.

#### Planting:

Tree planting decreased 30%, from 10,746 acres in 2003 to 7,573 acres in 2004.

96% of the planting was by landowners owning more than 100,000 acres. The predominant species planted were mixed softwoods.

#### **Professional Assistance**

The harvest acres supervised by licensed foresters declined slightly.

65% of all harvest acres in 2004 had a licensed forester involved, compared to 70% of all harvests in 2003.

Licensed Forester supervision on small woodlots (<= 100 acres) increased slightly from 26% in 2003 to 27% in 2004.

**Definitions:** 

Ownership Type Forest Industry Land: Woodlands owned by a forest products industry; usually most of the wood harvested is used by that industry.

Institutional Investor Timberlands: Woodlands owned by organizations, including Timberland Investment Management Organizations (TIMOs) and Real Estate

Investment Trusts (REITs) that hold timberland assets as fiduciaries for the benefit of others.

Non-Industrial Land: Woodlands privately owned but NOT by a forest industry. These include private individuals and other non-forest product industries.

Other woodlands: Woodlands owned by other entities not listed above -- including local, state, federal, or tribal governments.

Types of Harvests Partial Harvest: Harvest where trees are removed individually or in small (<5 acre) patches.

Shelterwood: Harvest of mature trees from a forest site in two or more stages. The first stage removes only a portion of the trees to allow

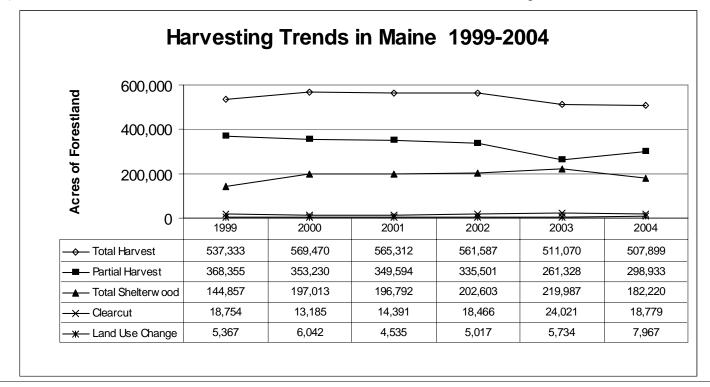

establishment of regeneration before the remaining trees are removed in subsequent harvest.

Clearcut: Harvest on a site larger than 5 acres that results in a residual basal area of acceptable growing stock trees >4.5" DBH of less than 30

square feet per acre, unless after harvesting the site has a well-distributed stand of acceptable growing stock 3 feet tall for softwood and 5 feet for hardwoods (Overstory Removal). Refer to the latest copy of the Maine Forest Practices Act, Maine Forest Service Rules

Chapter 20 for additional information.

Change of Land Use: Harvest conducted to convert forestland to another land use such as house lots, farm pastures, etc.

### 2004 Annual Report on Clearcutting and Precommercial Activities

Compiled from the 2004 Landowner Reports and other survey instruments. Data collected under the provisions of the Forest Resources Assessment Program, 12 MRSA § 8878-A Large Landowners (own >100,000 acres) All Other Landowners All Landowners Precommercial Clearcuts > 75 **Purpose for Clearcut** Acres Activities acres in size (see explanation below) Clearcut Acres Acres Acres TSI Planted 4 Sub Total Avg. #### Purposes for creating clearcut:

- Removal of poor quality, intolerant, under stocked, short lived or mature overstories where the retention
  of the residual overstory trees is not justified for further increase in value, as a source of seed, or for
  protection of the new stand.
- 2. Ecologically appropriate improvement or creation of wildlife habitat.
- 3. Removal of stands that, if partially harvested according to accepted silvicultural practice, are at high risk for windthrow due to factors such as soils, rooting depth, crown ratio or stem quality.
- **4.** Harvesting of an existing plantation or other forest stand established by or previously treated with precommercial silvicultural activities.
