Staff of the Division of Oil Conveyance Services Department of Environmental Protection

Table #1 Transactions at Licensed Terminals (January - December 1979)

In 1979, our 43 licensed terminals transferred 8,080,648 barrels of oil less than the year 1978.

There were six new terminal licenses granted in 1979. Three new licenses were transfer in ownership only, two were issued to lighter vessels, and there was one new terminal opened in Rockland, Maine.

Ten licensees showed an increase in their volume last year, two stayed approximately equal, ten were not involved in any transfer operations at all (five terminals and five lighter vessels), and twenty-one licensees experienced a decrease in volume over last year's figures.

| Terminal | License # | # Transfers | Total Volume in Barrels |
|--|-----------|-------------|-------------------------|

Table #2 Transactions by Month at Licensed Oil Terminal Facilities

In 1978 there were 3,125 recorded cargo transactions in Maine. In 1979 there were only 2,680 or 445 less. This table reflects transfer operations by cargo type; it does not reflect the actual number of vessel movements. It merely means that a lot of ships carry "split" cargoes. For example: most small tankers visiting our island communities carry gasoline and fuel oil in the same load. As this is the case then the terminal would report two separate cargo transactions even though the vessel only came to the terminal once. This table, therefore, cannot be used to measure ship movement frequency.

| Months (1979) | Number of Transfers | Total Barrels |
|--------------------|------------------------|---------------|
| January | 265 | 11,704,570 |

Table #3 Oil Spills by Type of Incident for 1979

There are no real dramatic differences in the type of incidents the Oil Division documented in 1979 from other years.

Incidents can occur just about anywhere oil is transported or stored.

The Oil Division has estimated that there is most likely around 300,000 oil tanks presently in service in Maine. Many of them are old, many are buried, all are operated and maintained differently, and they range in size from 150,000 barrel capacity down to 6 barrel.

Each tank, if serviced only twice per year, means that product is handled by men literally hundreds of thousands of times per year.

All this handling and all the trucks needed to supply the tanks creates an enormous number of opportunities for spills to occur.

Couple this with all the fuel tanks on private vehicles, fishing boats, airplanes, railroads, and the lube oil that is necessary to make all of these machines dependable and work properly (plus transmission fluids, greases, hydraulic, transformer, cutting, and specialized machine oils ad infinitum) and one can easily see why this state can expect 300 to 400 oil spills per year.

The diversity of spill situations shown in this table is clearly a mirror reflection of the depth of our state's dependence on petroleum. *Note: This incident data does not reflect the petroleum pollution problem in Maine only the oil spill problem. The Oil Division stresses this fact because if one looks at all the activities listed, it is easy to see that there are many other waste products of petroleum usage besides spill wastes.

Table #4 Frequency and Volume of Oil Spills by Product Type for 1979

Following the rationale of all the transportation and handling that goes on, one finds that all types of oil are spilled. The ones spilled most frequently are those handled more frequently.

As with all other years, in 1979 #2 fuel was the oil spilled most frequently, but for the very first time the largest volume of oil spilled was #6 industrial oil. These figures reflect the fact that the volume spilled bears very little relation to the frequency of spills and that we must be prepared for the possibility of some very large spills. Our major spill history also supports this possibility.

| Product | Number of Spills | % of Total | Volume (Gallons) |
|--------------|---------------------|------------|---------------------|
| #1 Kerosene | 15 | 4.3 | 1,531.00 |
| #2 Fuel Oil | 82 | 24.0 | 21,655.50 |
| Diesel | 40 | 11.7 | 2,026.00 |
| #5 Fuel Oil | 1 | 0.2 | 75.00 |
| #6 Fuel Oil | 23 | 6.7 | 35,258.00 |
| Lube Oil | 24 | 7.0 | 257.00 |
| #4 Fuel Oil | 4 | 1.1 | 1,107.00 |
| Waste Oil | 19 | 5.5 | . 157.00 |
| Unknown | 41 | 12.0 | 199.70 |
| Regular Gas | 46 | 13.4 | 7,497.50 |
| Premium Gas | 3 | 0.8 | 300.00 |
| No Lead Gas | 4 | 1.1 | 4,480.00 |

| JP-3 Gas | 0 | 0.0 | 0.00 |
| JP-4 Gas | 1 | 0.2 | 100.00 |
| Asphalt | 4 | 1.1 | 7,040.00 |
| Crude Oil | 6 | 1.7 | 596.00 |
| Other | 22 | 6.4 | 2,460.20 |
| Totals | 34 1 | 100.0 | 88,350.90 |

Table #5 Environmental Medium Effected by Spills for 1979

The number of spills involving all environmental mediums increased over 1978. By far the most dramatic increase in spills occurred into ground water. In 1979 we saw a threefold plus increase in the number of spills into ground water over any other previous year.

We expect this problem to increase in frequency as people become more aware of our willingness to help them solve this type of problem. Many of these instances are several years old.

| Medium Effected | Number of | Spills |
|-------------------------------|-----------|------------------|
| Land | 95 | |
| Surface Water | 153 | |
| Land to Surface Water | 66 | |
| Ground Water | 6 | |
| Ground Water to Surface Water | 17 | (27) |
| Land to Ground Water | 4 | - (& !) - - |
| Total Spills | 34 1 | |

1980 36 reported not spills (not affected area, wells)

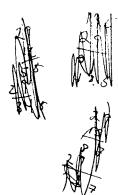

Table #6 Summary of Clean-up Materials for 1979

This information changes dramatically every year and other than to illustrate that a relatively large volume of a variety of waste products are generated from oil spill clean-up operations each year the numbers themselves are not particularly significant. In comparison to 1978 they all changed dramatically.

There were 58 more spills in 1979, but 7,651 gallons less oil was actually spilled. Some 10,948 gallons more oil was recovered and recycled in 1979 even with an overall decrease in the amount spilled. The Division estimates that clean-up activities generated three times more contaminated waste water than in 1978. Solid combustibles increased from 519 drums to over 6,261 drums primarily because of one incident. The volume of non-combustibles decreased by over 2,000 yards because the Oil Division has no place to properly manage these wastes. In effect, we are leaving more oil on the ground than we would like. The Division suggests that it appears awareness has set in and most people are trying much harder to limit the amount of oil spilled and trying harder to recover it for reuse. These activities suggest that our spill prevention program has been assisted substantially by the ever increasing cost of oil.

| Total Volume Spilled | 88,350.90 | Gallons |
|------------------------|-----------|-------------|
| Oil Recycled | 32,735.00 | Gallons |
| Liquid Non-Recyclable | 38,503.00 | Gallons. |
| Solids Combustible | 6,261.37 | Drums |
| Solids Non-Combustible | 1,485.35 | Cubic Yards |
| Total Oil Recovered | 49,986.50 | Gallons |

Table #7 Where Spills Occur - Listing of Oil Spills by Municipality for 1979

The Oil Division feels that this table is perhaps the most revealing of them all. In 1979 we responded to spills in 136 different communities.

The spill problem can affect us all and we must be prepared to go anywhere at almost any time to fulfill our response obligations associated with the provisions of the Coastal Conveyance Act.

Our larger communities and port areas generally have more spills than other parts of Maine, again due to the number of times oil is handled by

Table #8 Vessels Making More Than 50 Transfers

This table identifies the workhorses of the Maine small tank vessel fleet. These vessels are relatively small volume, shallow draft vessels principally involved with in-harbor transport, bunkering, lightering, island supply, and Portland to Bangor coastwise transportation.

We are very familiar with these vessels. They all have a good spill record.

The nine vessels account for over 50% of the cargo transactions conducted by our licensees in 1979.

| Name of Vessel | Shipments Number | & Receivables Barrels | Dominant Pro | Volume |

Table #9 Tank Vessels Transferring Product in Maine Waters in 1979

This is primarily an informational table designed to illustrate that transfer operations involving 225 different ships occurred in our waters last year. The vessels ranged in size from 1,100 deadweight tons on the lower end of the scale (8,000 bbl capacity) to many vessels in the 65 to 80,000 ton range (500,000 to 750,000 bbl capacity) on the high scale.
