FROM: Joyce Noel, Division of Licensing & Enforcement
Bureau of Oil & Hazardous Materials Control

DATE: May 7, 1987

RE: Annual Hazardous Waste Activities Report for 1986

** ** ** ** **

The following report is a summary of the hazardous waste activities within Maine for the calendar year 1986. This fulfills the requirement of 38 M.R.S.A., Chapter 13, Section 1304-A(2). This year's report and the 1985 report were derived by using the annual generator and facility reports. Quantities are reported in tons, but can be converted to units of gallons for comparisons. To compare 1984-1986 hazardous waste activities, the total waste generated in tons is converted to gallons by using the weight of water.

1986	$\frac{9696.70 \text{ tons}}{8.34}$	x 2000 = 2,325,347 gallons
1985		= 2,190,940
1984		= 2,187,400

There was a 134,407 gallon increase in hazardous waste generated and handled from 1985 to 1986.

Hazardous waste generated and shipped off-site within 90 days decreased in amount (Section A). A review of the waste minimization statements on the annual reports indicates an increase in the implementation of waste minimization programs in 1986. This may be attributed to an increased awareness by hazardous waste generators that waste minimization is a cost-effective program.

Storage and treatment of hazardous waste increased significantly for Maine licensed facilities (Section B). There was a noticeable trend by facilities with treatment licenses to increase the amount of hazardous waste they treated. One reason for this trend is that the facilities that can treat their hazardous waste and render the waste less hazardous may reduce shipping, handling and disposal costs.

366914

Reported storage and handling increased this year partially as a result of accurate reporting and clearer reporting instructions. Safety-Kleen Corporation's storage facility in Leeds was included in the handling total (Section B) for the first time in the 1986 annual report. Safety-Kleen is no longer considered the generator for all their small quantity generator customers. Safety-Kleen is now viewed as a storage facility for those generators. This also accounts for the increase in the amounts of hazardous waste handled by Maine storage facilities.

Presented below is a characterization of the type and amount of hazardous waste generated and handled in the State of Maine as well as the calculation of the total amounts of waste stored, treated and disposed of in Maine. Also presented below is a summation of the total amount of waste shipped from Maine to out-of-state destinations.

Also, included in the report is a list of licensed transporters, a list of Treatment, Storage and Disposal facilities which Maine generators use, a listing of consultants and laboratory firms, and a list of licensed hazardous waste facilities.

JNANNUAL

Report to the Board of Environmental Protection
on
Hazardous Waste Activities

A. Hazardous waste generated in Maine

<u>Waste Type</u>	<u>Amount (Tons)</u>
1. Ignitable	1411.64
2. Corrosive	754.36
3. Reactive	39.54
4. Toxic	3512.58
5. Acutely Toxic	15.80
6. Mixtures	196.36
7. Ignitable and Toxic	702.18
8. Reactive and Toxic	2.89
9. Corrosive and Toxic	0.67
*10. Miscellaneous	9.99
11. Corrosive and Reactive	2.47
12. Ignitable and Reactive	<u>0.05</u>
SUBTOTAL	6648.53

*Could not be characterized

B. Hazardous waste handled by Maine facilities by method (including facility generated waste)

*Safety-Kleen	371.46
Storage	781.12
Treatment	1895.59
Disposal	<u>-0-</u>
SUBTOTAL	3048.17

*Safety-Kleen storage of small quantity generator hazardous waste

C. Total hazardous waste generated in Maine for 1986

(A)	6648.53
(B)	<u>3048.17</u>
	9696.70 Tons

D. Hazardous waste transported into Maine for treatment or disposal = 0.
