SUMMARY
This bill was the result of the Wood Measurement Study conducted during the summer of 1986 by a subcommittee of the Joint Standing Committee on Energy and Natural Resources.

The bill would have allowed deductions to be taken from gross scale in service situations as long as the method of deduction was consistent with the wood measurement method employed and that both were approved by the state sealer in the same manner as is currently employed for measurement in sales situations.

SUMMARY
The bill, as amended, restricts the development of water diversion projects for hydropower purposes that would affect water flow in those rivers listed in 12 MRS §403. Legislative approval is required for any such development. The amended bill also provides a definition of the term, "existing dam". Under existing law, the redevelopment of existing dams on the protected rivers is allowed under certain situations, but there has been some controversy in the past over the meaning of the term.
