**SUMMARY**

This bill has been introduced in response to the formal disapproval by the federal Environmental Protection Agency, of Public Law 1991, Part A, Chapter 814. This bill provides the correct procedure to be used by the State in considering those unusual situations in which existing conditions may preclude the attainment of a water body's statutory classification of quality. This procedure, called a "use attainability analysis," is closely modeled on the federal requirements adopted by the federal Environmental Protection Agency, 40 Code of Federal Regulations, Part 131. All requirements of this federal regulation are incorporated by reference.

This bill provides further clarification on certain portions of the federal requirements. Consistent with the intent of federal law, this bill expressly prohibits use of the use attainability analysis process to eliminate existing uses, to allow degradation of a water body that is currently meeting its classification or the further degradation of a water body that has failed to attain its classification. The bill provides for a formal public hearing and decision-making process in order to ensure adequate public participation as required by federal law.

The committee amendment (H-444) adds a phrase from federal regulation regarding cost-effective best management practices that was inadvertently not included in the original bill.

The amendment also adds language to clearly state that the Board of Environmental Protection is only to make a recommendation to the Legislature under the use attainability analysis procedure if it has adopted a proposal to add to or change the designated uses of the State's waters in accordance with the Maine Revised Statutes, Title 38, section 464, subsection 2-A.

This amendment also moves the definition of the term "designated use" from the general definitions section of state water quality law to the proposed subsection regarding use attainability analysis procedures.

This amendment applies the subcategory of designated uses for aquatic life and related habitat created by Public Law 1992, chapter 813, Part A to the impoundment of the Ripogenous hydroelectric project. This action is taken following approval by the federal Environmental Protection Agency on March 25, 1993 of a downgrade of water quality standards for the impoundment based on a use attainability analysis conducted jointly by the Bowater Corporation and the Department of Environmental Protection.
